- The new life-form (a *manomaya kāya* with a new *hadaya vatthu*) emerges from the dead body right after the last *citta vīthi*. Here we will discuss the case where the new life is either human or animal and thus, that *manomaya kāya* is a *gandhabba*; see “[Manomaya Kaya \(Gandhabba\) and the Physical Body](#)” and “[Ghost in the Machine – Synonym for the Manomaya Kaya?](#)”.
- A human baby is born after several steps following the *paṭisandhi* moment. That includes the step of the *gandhabba* getting into a womb at the “*okkanti* step” long after *paṭisandhi*. See #8 of “[Antarābhava and Gandhabba](#).”

2. *Paṭisandhi* (“*paṭi*” is to “bind,” and “*sandhi*” is a “joint” in Pāli or Sinhala.) Thus, *paṭisandhi* means joining a new life at the end of the old. That happens a thought-moment after the last *citta* of the current existence (*bhava*.)

- Let us consider an example. If the subsequent life of a human is that of an animal, then an animal *gandhabba* comes out of that human body at the end of that last *citta vīthi*. Of course, the *gandhabba* has an invisible (subtle) body, which can be seen only by a person with *abhiññā* powers.
- On the other hand, if a human *bhava* ends and a *Deva* (or *Brahma*) *bhava* start, a fully-formed *Deva* (or *Brahma*) will appear in a *Deva* (or *Brahma*) realm at the end of the last *citta vīthi* of the human *bhava*. There is no separate “*gandhabba* state” in *Deva* (or *Brahma*) realms.
- The following analysis is technical and suitable only for those familiar with *citta vīthi* processes in *Abhidhamma*. **However, the conclusions are informative, so it is beneficial for all to go through them.** *Citta vīthi* is discussed in “[Citta Vīthi – Processing of Sense Inputs](#).”

Paṭisandhi Takes Place After the Last *Citta Vīthi* of the Current *Bhava*

3. The last *citta vīthi* of the old life with 17 *citta* run in the standard way (see #4 of “[Citta Vīthi – Processing of Sense Inputs](#).”):

atīta bhavaṅga (AB), *bhavaṅga calana* (BC), *bhavaṅga upaccheda* (BU), *pañcadvārāvajjana* (PD), *cakkhu viññāṇa* (CV), *sampaṭiccana* (Sam), *santīraṇa* (San), *votthapana* (V), J J J J J J (*Cuti*) J (*Paṭisandhi*), T, T.

- That last *citta vīthi* arises due to a previous *kamma vipāka* which brings an *ārammaṇa* (thought object) associated with that *kamma vipāka* through one of the five sense doors: Normally, it is a visual or a sound associated with the new existence (*bhava*).
- Then at the *votthapana citta*, the mind decides to act on that *ārammaṇa* based on the person's *gati*. **The person has no control over it, which happens in a split second.**
- After the fifth *javana citta*, there are two more *javana citta* are left. **The sixth is the *cuti citta*, and the seventh and last *javana* is the *paṭisandhi citta*.** Following the seven *javana* the last two *Tadārammaṇa* (T) (or “registration”) *cittā* run **and the last last *citta vīthi* ends and the old *hadaya vatthu* dies.**
- Let us consider that process in detail.

Vipāka Brings in Ārammaṇa Triggering the Last Citta Vīthi

4. When close to end of an existence, a *vipāka* brings in an *ārammaṇa* based on the strongest *kamma* from the past. If that person still has “*gati*” to commit such a *kamma*, his mind will embrace that *ārammaṇa* and re-enact that same *kamma*. **That is “*kamma sambhava*.”**

- That “*vipāko kamma sambhavo*” process is initiated at the *votthapana citta*. The *votthapana citta* decides how to proceed with the *ārammaṇa* from the *kamma vipāka*.
- Attachment to that particular *ārammaṇa* happens because that person still had that particular “*gati*” with which he committed that particular *kamma* in the past. See “[Vipāka Vedanā and “Samphassa jā Vedanā” in a Sensory Event.](#)”
- The attachment gets stronger with each *javana citta* and by the time the person has the “*cuti citta*” in the sixth *javana*, he has fully embraced that *gati*. **Thus, in the next *javana citta* (*paṭisandhi citta*) the mind grasps that new *gati*.** See the sequence of *javana citta* in #3 above.

5. For example, if that *ārammaṇa* re-constructs an old *kamma* (say, killing an enemy) that person will go through the same sequence (that led to the killing in the past) again in his mind. If his *gati* have not improved, his mind will automatically go through the same steps, “killing the person” as if in a dream. That mindset (*gati*) corresponds to a hell-being, **and thus he will be instantaneously born in a hell (*niraya*.)**

- If Aṅgulimāla had not met the Buddha (and did not become a Noble Person) he would have been born in a *niraya*. See, “[Account of Aṅgulimāla – Many Insights to Buddha Dhamma.](#)”
- Thus “*vipāko kamma sambhavo*” starts with the first *javana citta*. Each subsequent *javana* strengthens via *āsevana paccayā* from the previous *javana*. Thus, after five *javana-citta*, *kammic*-energy is optimized. See “[Āsevana and Aññamañña Paccayā.](#)”

Paṭisandhi Citta Is Not Paṭisandhi

6. As we saw above, *cuti citta* and *paṭisandhi citta* are two *javana citta* in the last *citta vīthi* of the current *bhava*. The *paṭisandhi citta* gets one to the mindset of the new *bhava*, and the mind firmly gets into that “*gati*.” Then in the last two “registration *citta*” (*Tadārammaṇa*) that *gati* is firmly registered in the mind.

- **With the death of the old *hadaya vatthu*, *kammic* energy creates a new *hadaya vatthu* matching that registered “*gati*.”**
- In the example of #5 above, it is a *gati* suitable for a “*niraya* being.”
- Thus, transition to the new *bhava* takes place at the end of the last *citta vīthi* with the creation of the new *hadaya vatthu* by *kammic* energy. That is the *paṭisandhi*.

- Thus, *paṭisandhi citta* is different from *paṭisandhi*.

Operation of the Rebirth Cycle

7. Old *kamma* bring *vipāka* with various *ārammaṇa*. Mind gets attached to such *ārammaṇa* and engage in more *kamma*. That is why the rebirth cycle never ends, UNTIL one fully grasps that process and takes steps to stop attaching to such *ārammaṇa*.

“kammā vipāka vadḍhanti, vipāko kamma sambhavo

Tasmā punabbhovo hoti, evan loko pavattati”

- **“Kamma lead to *vipāka*; (ignorant people) attach to *ārammaṇa* arising due to *vipāka* and do more *kamma* (which in turn will bring more *vipāka*.) Thus the cycle of rebirth repeats, and that is how the world continues (for those people).”**

8. The last *citta vīthi* brings the *kammic vipāka* to energize the next *bhava*: “*kamma vipāka vadḍhanti*.” At the *votthapana citta*, i.e., a decision is made on whether to accept that *ārammaṇa*.

- **If the decision is made to grasp the *ārammaṇa* brought in by that *vipāka citta*, then *javana citta* will arise to power the new life:** That is “*vipāko kamma sambhavo*.”

Last Citta Vīthi and Paṭisandhi

9. The last *citta vīthi* of the old life arises in the old *hadaya vatthu* and it will run its course of 17 *cittā* — including the last two *Tadārammaṇa* or “registration” (T) *cittā* — after the seven *javana cittā*.

- *Cuti* or death is not a *citta*; it is the death of the *hadaya vatthu* of the old life. ***Cuti* (or the death of the old *hadaya vatthu*) happens immediately following the last *citta vīthi*, and the *cuti citta* is in the last *citta vīthi*. *Paṭisandhi citta* grasps the *gati* of the new *bhava*.**
- At the very end of that last *citta vīthi* (after the last two *Tadārammaṇa cittā*), ***kammic energy creates the *manomaya kāya* for the new existence (*bhava*) based on the “*gati*” registered in the last two *Tadārammaṇa cittā*.***
- Thus, *paṭisandhi*, or the arising of the new *hadaya vatthu*, happens just after that last *citta vīthi*.

New Hadaya Vatthu Arises at the end of the Last Citta Vīthi

10. When this last *citta vīthi* ends, the old *hadaya vatthu* is dead, too; it had exhausted all its *kammic* power. The next *citta vīthi* starts with a new *hadaya vatthu* of the new life powered by a new *kamma bīja*. The new *hadaya vatthu* is formed by the new *kamma* seed grasped at the 7th *javana* (the *paṭisandhi citta*), and the first *citta vīthi* for the new life starts immediately.

- If a human *bhava* ends and the next *bhava* is an animal, then that animal *gandhabba* comes out of that body at the end of that last *citta vīthi*.
- On the other hand, if a human *bhava* ends and *Deva bhava* starts, a fully-formed *Deva* will appear in a *Deva* realm at the end of the last *citta vīthi* of the human *bhava*.
- Let us consider a specific example.

Human to Animal Bhava

11. If a human dies and the next life is an animal, that animal *gandhabba* out of the dead human body. **It has the blueprint for the new physical body of that animal.**

- That animal *gandhabba* now has to wait for a suitable womb. It is not that *gandhabba* decides which womb is good; instead, when a womb that matches the *gati* of the *gandhabba* becomes available, *gandhabba* will be pulled into it (*okkanti*) by the *kammic* energy. That is true for humans and animals.

- A single cell called zygote results when a sperm fertilizes an egg in a womb. But there is no life there until the *gandhabba* enters the womb and is incorporated with that zygote. Now the zygote becomes an embryo, then a fetus, and once out of the womb, grows into a full-size human or an animal according to that blueprint.
- Science has been unable to explain how all the complex body parts of a human or animal develop, starting from a single cell. This is how it happens. **The blueprint for all the complex body parts is in the *gandhabba*, not in that single cell**; see “[Buddhist Explanations of Conception, Abortion, and Contraception](#).”

Stopping of Grasping a New *Bhava*

12. In the last *citta vīthi*, a *Paṭicca Samuppāda* cycle operates with an *ārammaṇa* coming in via one of the six sensory faculties. Thus a PS cycle starts at the “*phassa paccayā vedanā*” step. See #12 of “[Difference Between Tanhā and Upādāna](#)” and #7 of “[Contact Between Āyatana Leads to Vipāka Viññāna](#).”

- For example, at the death of Ven. Āṅgulimāla, *kammic* energy would have brought in an *ārammaṇa* that re-creates the killing of another human. If Āṅgulimāla still were a killer, his mind would have grasped that *nimitta*, which would have led to rebirth in *niraya* (hell.) However, since he became an *Arahant*, his mind would not grasp it. Ven. Āṅgulimāla did not grasp ANY *ārammaṇa* and thus was not reborn anywhere.
- Thus, unless “*phassa paccayā vedanā*” becomes “*samphassa paccayā samphassa-jā-vedanā*,” PS will not proceed to the “*tanhā paccayā upādāna*” step to grasp the new *bhava*. See “[Dukkha Samudaya Starts With Samphassa-Jā-Vedanā](#).”
- The above example illustrates the stopping of the *Uppatti Paṭicca Samuppāda* at the “*phassa paccayā vedanā*” step in “[Akusala-Mūla Upapatti Paṭicca Samuppāda](#).”

13.6.6. Cuti-Paṭisandhi – An Abhidhamma Description

1

Revised May 26, 2021; re-written September 7, 2022; re-written December 2, 2022

Paṭisandhi does not take place in a womb. It happens simultaneously with the time of the end of the previous existence (*cuti*; pronounced “chuthi.”)

Paṭisandhi Does Not Happen in a Womb

1. Many people believe that *paṭisandhi*, or the linking to a new life, happens in a womb (in human and animal realms). But that is not correct. *Paṭisandhi citta* is experienced in the next very *citta* after the *cuti citta* of the old life in the last *citta vīthi* of the dying person.

- The new life form (*gandhabba*) emerges from the dead body right after the last *citta vīthi* (However, if the next life is an *opapātika* one, the life-form arises fully formed). Here we will discuss the case where the new life is either human or animal and thus a *gandhabba* is formed; see “[Manomaya Kāya \(Gandhabba\) and the Physical Body](#)” and “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#)”.
- A human baby is born in a series of steps following the *paṭisandhi* moment. See #8 of “[Antarābhava and Gandhabba](#).”

2. *Paṭisandhi* (“*paṭi*” is to “bind” and “*sandhi*” is a “joint” in Pāli or Sinhala.) Thus *paṭisandhi* means joining a new life at the end of the old. That happens a thought-moment after the last *citta* of the current *bhava*.

- If the next life of a human is human or animal, then the *gandhabba* for that life comes out of that body at the end of that last *citta vīthi*. Of course, the *gandhabba* has a very fine body, which can be seen only by a person with *abhiññā* powers.
- On the other hand, if a human *bhava* ends and *Deva bhava* start, a fully-formed *Deva* will appear in a *Deva* realm at the end of the last *citta vīthi* of the human *bhava*.

- The following analysis is technical and suitable only for those familiar with *citta vīthi* processes in *Abhidhamma*. However, the conclusions are informative, so you may want to go through them. *Citta vīthi* is discussed in [“Citta Vīthi – Processing of Sense Inputs.”](#)

Paṭisandhi* Takes Place in the Last *Citta Vīthi* of the Current *Bhava

3. The last *citta vīthi* of the old life with 17 *citta* run in the standard way: *atīta bhavaṅga*, *bhavaṅga calana*, *bhavaṅga upaccheda*, *pañcadvārāvajjana*, *cakkhu viññāṇa*, *sampaṭiccana*, *santīraṇa*, *votthapana*, and then *javana* sequence (7 *javana citta*) starts. After the fifth *javana citta*, there are two more *javana citta* left. The sixth is the *cuti citta*, and the seventh and last *javana* is the *paṭisandhi citta*.

- In the last *citta vīthi*, a previous *kamma vipāka* provides an *ārammaṇa* (thought object) associated with that *kamma vipāka* through one of the five sense doors: it is normally a visual or a sound associated with the new existence (*bhava*). Even though the person's physical faculties may be weak, the person will see or hear very clearly whatever the *nimitta* presented by the *kamma vipāka*.
- Then at the *votthapana citta*, the mind decides to act on that *ārammaṇa* based on the person's *gati*. The person has no control over it. It is called “*kammaja purejāta; cittaja pacchajāta*,” i.e., *kamma vipāka* comes first, and then accordingly, the *javana citta* flow grasping that new *bhava*:

“*kammā vipāka vadḍhanti, vipāko kamma sambhavo*

Tasmā punabbhovo hoti, evan loko pavattatī”

OR,

“*kamma* lead to *vipāka*; (the ignorant being) attaches to *ārammaṇa* arising due to *vipāka* and does more *kamma*

Thus the cycle of rebirth repeats, and that is how the world exists.”

Vipāka* Brings in *Ārammaṇa

4. First, a *vipāka* brings in an *ārammaṇa*. An ignorant person gets involved in it and makes a new *kamma*, “*kamma sambhava*.” That “*vipāko kamma sambhavo*” process is initiated at the *votthapana citta*. The *votthapana citta* decides how to proceed with the *ārammaṇa* (object) from the *kamma vipāka*. The living being normally gets attached to that object via greed/hate/ignorance. That can lead to two effects:

- generates new *kamma* in *javana citta* in regular *citta vīthi*. See [“Vipāka Vedanā and “Samphassa jā Vedanā” in a Sensory Event.”](#)
 - grasps a new existence (*bhava*) in *javana citta* if it is the last *citta vīthi* for that existence.
- Thus “*vipāko kamma sambhavo*” starts with the first *javana citta*. Each subsequent *javana* strengthens via *āsevana paccayā* from the previous *javana*. Thus, after five *javana-citta*, *kammic*-energy is optimized. That holds for both above cases.

Last *Citta Vīthi* for an Existence

5. The sixth *javana-citta* is the *cuti citta*, and the next *paṭisandhi citta* grasps the new *bhava*.

- *Cuti citta* happens in the last *citta vīthi* just after the actual *cuti* (death) because it is *pacchajāta* to *kammaja cuti* event.
- Linking to the next life happens at the 7th *javana citta* or the *paṭisandhi citta*.
- That last *citta vīthi* marks the death of that old *hadaya vatthu*. A new *hadaya vatthu* arises at the *paṭisandhi* moment for the next *manomaya kāya*. That is a human *gandhabba* if the new one is a human *bhava*.

Kamma Vipāka Brings in a Specific Ārammaṇa

6. The last *citta vīthi* brings the *kammic vipāka* to energize the next *bhava*. **If the mind grasps the ārammaṇa brought in by that vipāka citta, then javana citta will arise to power the new life:** “*kamma vipāka vadḍhanti*.” The “*vipāko kamma sambhavo*” happens at the *votthapana citta*, i.e., a decision is made on whether to accept that *ārammaṇa*. That decision depends on the level of *avijjā* (arising due to one’s *gati* and *āsavā*, as well as the *ārammaṇa* in question).

- A *Paṭicca Samuppāda* cycle starts with an *ārammaṇa* coming in via one of the six sensory faculties. Thus a PS cycle starts at the “*phassa paccayā vedanā*” step. See #12 of “[Difference Between Tanhā and Upādāna](#)” and #7 of “[Contact Between Āyatana Leads to Vipāka Viññāna](#).”
- For example, at the death of Ven. Āṅgulimāla, *kammic* energy would have brought in an *ārammaṇa* that re-creates the killing of another human. If Āṅgulimāla still were a killer, his mind would have grasped that *nimitta*; that would have led to rebirth in *niraya* (hell.) However, since he became an *Arahant*, his mind would not grasp it. Ven. Āṅgulimāla did not grasp ANY *ārammaṇa* and thus was not reborn anywhere.
- Thus, unless “*phassa paccayā vedanā*” becomes “*samphassa paccayā samphassa-jā-vedanā*,” PS will not proceed to the “*tanhā paccayā upādāna*” step to grasp the new *bhava*. See “[Dukkha Samudaya Starts With Samphassa-Jā-Vedanā](#).”
- The above example illustrates the stopping of the *Upapatti Paṭicca Samuppāda* at the “*phassa paccayā vedanā*” step in “[Akusala-Mūla Upapatti Paṭicca Samuppāda](#).”
- This “*vipāka kamma sambhavo*” starts with the first *javana citta* and builds up gradually up to the fifth *javana citta*. Now the sixth *javana*, *cuti citta*, had been determined from the beginning of the *citta vīthi*. The seventh *javana citta* grasps the new existence (*bhava*.)

Last Citta Vīthi

7. Now, let us look in detail at the last *citta vīthi* of the old life. This *citta vīthi* got started by the last bit of *kammic* energy from the old life, and it will run its course of 17 *citta* before it ends. It is like throwing a stone. The person throwing the stone would have released all the energy by the time the stone leaves his hand. But the stone will be traveling until all that energy is spent. In the same way, even though the *kammic* energy for the old life has ended, the last *citta vīthi* will run its course of 17 *citta*, including the last two *bhavaṅga citta* after the seven *javana citta*.

- *Cuti* or death is not a *citta*; it is the end of the *kammic* energy of the old life. ***Cuti (or the death of the old hadaya vatthu) happens just after initiating the last citta vīthi***, and the *cuti citta* is in the last *citta vīthi*. *Paṭisandhi* is not a *citta* either.
- Here the old *bhavaṅga* has ended too, but there are two *bhavaṅga citta* left in the last *citta vīthi*. The new *vatthu rupa* cannot be formed until this last *citta vīthi* runs its course. That is because as soon as one is formed, it will start its *citta vīthi*, and no two *vīthi* can be there simultaneously.
- At the very end of that last *citta vīthi* (after the last two *bhavaṅga citta*), *kammic* energy creates the *manomaya kaya* for the new existence (*bhava*.) **Thus, *paṭisandhi*, or the arising of the new hadaya vatthu, happens just after that last citta vīthi.**
- In other words, *cuti* happens at the beginning — and *paṭisandhi* at the end — of the last *citta vīthi*. There is a “gap” of 17 *citta* in between.
- Therefore, *cuti/paṭisandhi* are different from *cuti citta/paṭisandhi citta*. It is a subtle point. Don’t worry if you don’t understand that subtle point.

New Hadaya Vatthu Arises at the end of the Last Citta Vīthi

8. When this last *citta vīthi* ends, the old *hadaya vatthu* is dead too; it had exhausted all its *kammic* power. The next *citta vīthi* starts with a new *hadaya vatthu* of the new life powered by a new *kamma bīja*. The new *hadaya vatthu* is formed by the new *kamma* seed grasped at the 7th *javana* (the *paṭisandhi citta*), and the first *citta vīthi* for the new life starts immediately.

- If a human *bhava* ends and the next *bhava* is an animal, then that animal *gandhabba* comes out of that body at the end of that last *citta vīthi*.
- On the other hand, if a human *bhava* ends and *Deva bhava* start, a fully-formed *Deva* will appear in a *Deva* realm at the end of the last *citta vīthi* of the human *bhava*.
- Let us consider a specific example.

Human to Animal *Bhava*

9. If a human dies and the next life is an animal, that animal *gandhabba* out of the dead human body. **It has the blueprint for the new physical body of that animal.**

- That animal *gandhabba* now has to wait for a suitable womb. It is not that *gandhabba* decides which womb is good; rather, when a womb that matches the *gati* of the *gandhabba* becomes available, *gandhabba* will be pulled into it by the *kammic* energy. That is true for humans and animals.
- A single cell called zygote results when a sperm fertilizes an egg in a womb. But there is no life there until the *gandhabba* enters the womb and is incorporated with that zygote. Now the zygote becomes an embryo, then a fetus, and once out of the womb, grows to a full-size human or an animal according to that blueprint.
- Science has been unable to explain how all the complex body parts of a human or animal develop, starting from a single cell. This is how it happens. The blueprint for all the complex body parts is in the *gandhabba*, not in that single cell; see [“Buddhist Explanations of Conception, Abortion, and Contraception.”](#)

13.7 Abhidhamma via Science

July 15, 2016; revised February 16, 2021

1. In this section, I have two goals:

- Introduce Abhidhamma in a scientific way that can be understood not only by people with scientific backgrounds but anyone with an interest. It will complement the other section on Abhidhamma, which necessarily involves a lot of Pāli terminologies.
- To demonstrate that the current hypothesis by scientists that consciousness originates in the brain is not correct.

2. I will also make predictions in this section on what the scientists are likely to confirm in the future.

- We all are impressed by the scientific advances made during the past 100 years or so making our lives easier and more productive. I am actually a cheerleader for scientific and technological advances.
- Physics had been my passion since high school days, and that changed when I started learning Buddha Dhamma several years ago. I still love and work on topics of interest in physics (and science in general). Fortunately, I am finding that those two interests are not mutually exclusive, and there is significant overlap. In fact, this section is the result of my two overlapping interests.

3. Despite the advances in science and technology, there is much about the human mind that science does not understand, and has not even begun to understand. **Western science is based on the five physical senses, leaving out the most important one, the mind.**

- At the present time, in 2016, scientists have the wrong view that consciousness originates in the brain.
- All scientific theories relating to the mind are based on this wrong hypothesis. However, Buddha Dhamma says not only that the mind is a sense of its own, but it is the most powerful of all six senses.

4. **I will first discuss some interesting phenomena that scientists have discovered recently and are currently grappling with many diverse areas of science.** Then I will discuss the layout of the brain of humans and animals, and how that information can lead to satisfactory explanations of those phenomena by taking into account the Buddha's view of the mind as described in Abhidhamma.

- Instead of using Pāli words to describe Abhidhamma (which can be boring to those who are new to Abhidhamma), my hope is to explain Abhidhamma concepts in the context of such already observed phenomena.
- Posts on *Abhidhamma* at, "[Abhidhamma](#)."

Topics in this Section (I have moved a couple of posts from the [Dhamma and Science](#) section to here because they discuss possible future discoveries/present misinterpretations in science):

- [Neuroscience says there is no Free Will? – That is a Misinterpretation!](#)
- [The Double Slit Experiment – Correlation between Mind and Matter?](#)
- [Vision \(Cakkhu Viññāṇa\) is Not Just Seeing](#)

Here is another post from the Abhidhamma section that has a deeper analysis on the brain-mind connection:

- [Brain – Interface between Mind and Body](#)

13.7.1 Vision (Cakkhu Viññāṇa) is Not Just Seeing

July 15, 2016; revised October 19, 2020; rewritten January 13, 2023

Cakkhu viññāṇa is not just “seeing a picture” of an object; it includes gauging the distance of the object from us. Furthermore, it simultaneously generates recognition (perception), feelings, and other mental factors.

Introduction

1. You may have experienced or seen the following happen to someone else. You are crossing a street and see a speeding car approaching. You instinctively run to the safety of the pavement.

- You see the car coming, gauge its speed and distance, and realize it is too fast. Thoughts of danger and fear arise, and you quickly jump out of its way. All that happens in a split second.
- As you can see, several things happened in that short time. In particular, you recognize it is a car and its distance from you. Since you perceive it is coming too fast, fear arises, and you jump.
- Scientists have only begun to investigate the arising of recognition and feelings associated with an event. But they have made recent progress in resolving the issue of “gauging the distance in a visual event.”

2. In 1988, Dee Fletcher almost died due to carbon monoxide poisoning. Her husband found her unconscious just in time to save her life. However, when she recovered, she had lost “sight” in the ordinary sense of the word.

- She could not see or recognize someone standing right in front. She lost the ability to read a book.
- But soon she realized that she had some peculiar abilities. She could grab a pencil from the hand of a person who held it in front of her, even though she could not actually “see” the pencil or the person.
- Her vision is good enough for picking something up, but not good enough for seeing it!

Dee Fletcher's Case Provided Many Clues on Vision

3. Since then researchers have done numerous experiments on her, which have led to some astonishing findings about how vision works.

- For example, they tested her with a mailbox with a narrow slot for inserting letters. Even though she could not see the mailbox — let alone the slit or the envelope — she could insert the letter in the slot without effort. Even when they tilted the slit, she did not have a problem at all! It was as if a phantom inside her was doing that task for her.

4. Another ability of Dee was walking around the house without bumping into furniture or walls. Since that ability could be due to her familiarity with the house, they took her to an unfamiliar trail. She had no problem walking there without tripping over rocks or bumping into trees.

- This disorder is known as **visual agnosia**.
- It turns out that there are two relatively independent visual systems in the brain: One is for conscious perception (**visual cortex**), which was severely damaged in Dee. The other was for unconscious control of action (**superior colliculus**), which is largely preserved.

Two Ways of Visual Processing

5. The following figure shows the optical nerve splitting and connecting to those two areas in the brain.

You can download the figure [here](#).

6. The presence of two visual processing streams in the brain has been known only since 1982. Even though the role of the **visual cortex** in the brain (in producing a picture “in mind”) had been known before that, the role of a second processing area in the brain (**superior colliculus**) that helps with figuring out the “depth of vision” or how far a given object was proposed in 1982 by Leslie Ungerleider and Mort Mishkin.

- Of course, their model helped explain the symptoms experienced by Dee Fletcher. She had parts of her visual cortex damaged by carbon monoxide poisoning, while her superior colliculus was left intact. Her eyes sent the signals to the visual cortex, but the damaged visual cortex could not process that signal.
- You do not need to know the details of the visual cortex, superior colliculus, or any other technical term to get the idea I plan to convey. I do not know the finer details about them either.

How Vision Happens – Still a Mystery for Science

7. Of course, scientists are only aware that those two areas in the brain **contribute** to those two functions. They do not know exactly how the visual cortex gleans information about the object (i.e., its visual characteristics.) Also, it is not known how the superior colliculus figures out the object’s dimensions and how far it is (to grab an item correctly, both types of information are needed).

- We need to realize that “no light” is going to the visual cortex and there is no screen at the back of the head that displays the object in question. The optical nerve only transmits a chemical (and electrical) signal. **The visual cortex somehow generates a “picture” for our minds to see.**
- Even more mysterious is how the **superior colliculus figures out the depth of vision** from that chemical signal coming through the optical nerve.
- We will come back to these issues in upcoming posts, but first, let us continue with our discussion on what the scientists know at this time and how they found them.

Further Details of Dee Fletcher’s Case

8. Many research papers describe experiments involving Dee Fletcher, and the two principal researchers have written a book on this research: “Sight Unseen – An Exploration of Conscious and Unconscious Vision” by M. A. Goodale and A. D. Milner (2004).

- The above book is a bit expensive. Chapter 4 of V. S. Ramachandran's popular book, "Phantoms in the Brain" (1998) provides a less technical description. That book also describes some other interesting findings about the brain. In future posts, I hope to discuss some of those observations (particularly his and others' work on "phantom limbs").
- There is also a Wikipedia article on the [WebLink: WIKI: Two-streams hypothesis](#) on vision.

9. The book by Goodale and Milner also describes a visual problem that is the opposite of that of Ms. Fletcher. This syndrome is called "**optic ataxia**." Those with it can "see" and recognize objects very well, but they have difficulty in actions involving them.

- Those who suffer from optic ataxia can see the mailbox and slit described in #2 above. However, they have much difficulty putting a letter through the slit.
- It turns out that these people have their superior colliculus damaged, but their visual cortex works fine.

How Does the Mind Figure out the Distances to Objects Around Us?

10. Have you thought about how we can move around without bumping into each other and other objects like trees on the ground and cars on the road? The presence of the two processing streams can BEGIN TO explain how the brain figures out not only "what is in front of us (a human, tree, or a car)" but also "how far is it at and how big it is."

- As mentioned above, part of the signal going through the optical nerve to the visual cortex deals with the first task, and the other part going to the superior colliculus deals with the "how far and how big" issue.

11. Even though scientists have figured out that those two areas in the brain (visual cortex and the superior colliculus) somehow extract the two kinds of information, **they have no idea how those areas extract that information from the chemical signal coming through the optical nerve.**

- Scientists know that the lens in an eye projects an image of the object to the back of the eye (retina); see the figure above. It is pretty much the same as an image you can see with a lens:

This is pretty much how a camera captures an image:

How Can a Chemical Signal Provide the Perception of Sight (and Light)?

12. Of course, the film in an old camera undergoes chemical changes when the image falls on it. Then that film is chemically processed to reveal the picture.

- In the same way, when the image of an object falls on the retina of an eye, the cells on the retina generate a chemical (and electrical) signal. The optical nerve transmits this signal to the visual cortex and the superior colliculus in the brain. There is no “picture” transmitted to the brain.
- So, how does the visual cortex generate a visual of the object starting with the chemical signal from the eye?
- Even more puzzling is how the superior colliculus figures out the distance to the object (and the object’s dimensions), solely based on that same signal.

13. Even within the visual cortex, there are 30 different areas specialized to carry out different tasks. They all help provide a “comprehensive picture” of the object.

- For example, the area called V4 deals with the object’s color but does not care about the direction of motion.
- On the other hand, area MT (also called V5) responds to targets in the visual field based on their direction of motion, but does not care about the object’s color. Specialized sub-areas in the visual cortex carry out multiple tasks.

The brain is Not a Computer – It Can Change

14. Brain is indeed a very sophisticated machine! However, as we will find out in upcoming posts, it is not a typical machine like a computer. **It can change on its own!**

- **While a computer cannot get rid of parts that go bad, the brain can replace or repair bad parts and even make new parts.** This is puzzling neuroscientists right now. **They have confirmed that these things happen (I will discuss examples in future posts) but have no idea HOW the brain does that.** (However, when a whole section is damaged, like in the case of the visual cortex or superior colliculus, such rejuvenation is not possible).
- The key to this puzzle is the following. Our “mental body,” or the *gandhabba*, controls the physical body. The *gandhabba*, or the *manomaya kāya*, has three components: *kammaja kāya*, *cittaja kāya*, and *utuja kāya*. **The *cittaja kāya* plays the dominant role in CHANGING brain functions.** In other words, it is OUR THOUGHTS that can change the brain!
- Note that “*cittaja kāya*” means not a separate “body” but part of the *manomaya kāya* associated with our physical body.
- Ultimately, one attains *Nibbāna* by gradually transforming one’s brain. **In other words, getting rid of greed, hate, and ignorance can change one’s brain!** However, even a Buddha can only show the way, and one has to make an effort.
- The four types of bodies that we have and the *gandhabba* are discussed in the section “[Gandhabba \(Manomaya Kāya\)](#).” The critical functions of the *cittaja kāya* are also discussed in the post, “[Udayavaya Ñāna – Importance of the Cittaja Kāya](#).”

Buddha Dhamma and Science – a Symbiotic Relationship

15. We live in a truly opportune time to comprehend the value of Buddha Dhamma. Modern science provides clues that can be used with Buddha Dhamma to clarify many issues and vice versa. See, “[Buddha Dhamma – A Scientific Approach](#)” and “[Quantum Mechanics and Dhamma](#).”

- In this series of posts, I hope to suggest some such avenues for scientists to explore, based on Buddha Dhamma, which can also explain many of these “new findings.”
- As I have mentioned, attaining *Nibbāna* does not require such details. However, for most people, future confirmation of such “predictions” hopefully will help build confidence in Buddha Dhamma and to appreciate its value.

- Of course, the real value of Buddha Dhamma is not in exposing such mundane things, but in showing the path to liberation from suffering (*Nibbāna*). But it is good to have faith in Buddha Dhamma to feel confident that one is not wasting one's precious time in learning Buddha Dhamma.

13.7.2 The Double Slit Experiment – Correlation between Mind and Matter?

Revised March 13, 2018; November 15, 2019; November 25, 2022

There is no mystery in the “double slit experiment.” There is no “observer effect” in reality. Particle trajectories can be calculated with Bohmian theory.

Introduction

1. The failure of the materialistic approach in explaining consciousness is becoming ever more apparent; see [Ref. 1](#) and [Ref. 2](#) below.
 - The materialistic approach, of course, is to explain mental phenomena to arise in the brain, which is composed of inert matter.
2. Many scientists/philosophers are hoping that quantum mechanics can come to the rescue ([Ref. 3](#), and [Ref. 4](#)).
 - They say that even though deterministic Newtonian mechanics cannot explain consciousness, quantum mechanics can (because quantum mechanics does not have such an apparent deterministic nature.)

Quantum Mechanics to the Rescue?

3. Quantum mechanics (QM) is different from other branches of physics where one can get an intuitive idea of what is taking place.
 - What we currently do with QM can be called a “black box” approach. When we apply the correct equations, we get the right results. Einstein did not like this at all. Yet, to his frustration, all his predictions of the inadequacy of QM did not materialize AND the predictions of QM have been correct to amazing accuracy.
4. Those experiments, the results of which can only be explained by QM, **appear to be** non-deterministic.
 - This has compelled some scientists to investigate whether there is a connection between QM and the mind, which IS non-deterministic. Two experiments, in particular, have been at the forefront of these discussions. The “double-slit experiment” and the “Schrödinger’s cat experiment.”
5. This essay challenges the two central assumptions on this postulated relationship between QM and the mind:
 - i. Even if QM and the mind are non-deterministic in their own rights, there is no particular reason to believe there is an apparent connection between them.
 - ii. There is nothing really “non-deterministic” about QM, other than the indeterminacy depicted by the Heisenberg uncertainty principle. That is just the accuracy of a given measurement.

Quantum Mechanics Is Not Intrinsically Psychophysical

6. Let us look into (i) first. Henry Stapp is a leading physicist who argues that quantum theory will ultimately explain consciousness. In his book, “Mindful Universe” he says (p.2), “... quantum theory itself is intrinsically psychophysical as designed by its founders, and as used in actual scientific practice, it is ultimately a theory about the structure of our experience that is erected upon a radical mathematical generalization of the laws of classical physics.”

- My primary point is that quantum theory is NOT psychophysical; there is no way to accommodate “subjectivity” in QM. Where is the “mind connection” in the theory of QM?
- Others work on theories that try to explain consciousness as arising from quantum effects in the brain; see, for example, “Conversations on Consciousness”, by Susan Blackmore (2006). No one has clarified how these theories make the connection between “psyche” and “physical” in “psychophysical.”

The “Observer Effect” in QM

7. Let us review one experiment that has become the main demonstration for the “observer effect” in QM, the “double-slit experiment.” Here is a short video by Dr Quantum to illustrate the “paradox” of the double slit experiment:

[WebLink: YOUTUBE: Dr Quantum Double Slit Experiment](#)

8. The two main points of this experiment are:

- a. the particles behave like waves when both slits are open, and
- b. this “wave nature” goes away when the particle’s path is “observed” or monitored.

Bohmian theory of Quantum Mechanics

9. There is a version of QM called the Bohmian theory or the Pilot Wave theory developed by the late David Bohm. It uses Schrodinger’s equation to track the propagation of a “pilot wave.” That theory is explicitly non-local, i.e., quantum entanglement is built-in.

- With this theory, each wave equation solution describes a DETERMINISTIC path for the particle, and the statistical average agrees with the experiments and the results of the standard QM calculations.
- The actual trajectories have been harder to measure not because of a “mind effect,” but because observation can disturb the particle trajectory itself. Recent experiments have been conducted to “weakly” measure a system without appreciably disturbing the trajectories. Those experimental results are consistent with the predictions of the Bohmian theory ([Ref. 5](#)).

Thus the role played by Bohmian mechanics in these “QM experiments” is just like the role statistical mechanics played in thermodynamics.

- Here is a very short video showing INDIVIDUAL trajectories for a double-slit experiment calculated using the Bohmian theory. There is nothing “mysterious.” **Each particle has a definite trajectory. There is no “observer effect.”**

[WebLink: YOUTUBE: Bohmian Trajectories in the Double-Slit Experiment](#)

- When it is attempted to observe an individual particle’s path, the system’s coherence or the pilot wave is disturbed and the interference pattern goes away. Thus there is no “observer effect,” in the sense of bringing “subjectivity” in.

“Schrödinger’s Cat” Thought Experiment

10. Another famous experiment that is the subject of much discussion is the “Schrödinger’s cat” thought experiment. This experiment suggested by Schrödinger back in 1935, involves a cat in a closed chamber.

- A radioactive sample in the chamber, if it undergoes decay within a given period, triggers the release of a hammer that breaks a vial of a toxic gas that kills the cat. If a conscious observation is required to collapse the wave function, the cat’s fate is unknown until the box is opened. Unfortunately, both the consciousness-based and consciousness-free interpretations of quantum measurement are indistinguishable for the observer outside the box.

- In 2006, an actual experiment was conducted to simulate this experiment. It was reported that "... measurement alone, rather than conscious observation of measurement, is sufficient"; see [Ref. 6](#).

No Real "Observer Effect"

11. Thus there is no "observer effect" in the double-slit experiments or the Schrödinger cat experiment.
 - In the double-slit experiment, an "observer" could disturb the system's coherence if the disturbance is strong enough. It does not matter whether the "observer" is human or a mechanical device (in most cases it is non-human); one ALWAYS gets the same result. This is in contrast to real subjective situations. For example, millions of people make complex subjective decisions in the stock market.
 - So, where does the "objectivity" or "intention" – in the sense of the mind affecting the experimental result – come from? "Intent to monitor" is not a significant subjective decision; just a simple "yes" or "no."
12. Therefore, it is clear that there was no evidence for "subjectivity" in those experiments even before Bohmian mechanics or Schrödinger's cat experiment. Those two pieces of evidence make that point undeniable. There is no evidence of the mind affecting the outcomes of those experiments.

The Mind Creates Matter, Not the Other Way Around

13. The Buddha stated that the mind is at the forefront; "[Manopubbangamā Dhammā..](#)" A deeper *Abhidhamma* analysis is available at "[The Origin of Matter – Suddhatthaka](#)."
- Even though the mind affects matter and even CREATES matter, science has not advanced enough yet to confirm that.
14. There has to be a paradigm change in science to explain consciousness. **Any theory based on matter and attempt to treat mental phenomena as a byproduct will not succeed.** The mind is the more fundamental entity and takes precedence over matter.
 - Some philosophers are beginning to sense this reality. Even though he does not appear to know anything about Buddha Dhamma, philosopher Thomas Nagel says the following. "The great advances in the physical and biological sciences were made possible by excluding the mind from the physical world... ..But at some point it will be necessary to make a new start on a more comprehensive understanding that includes the mind." ([Ref. 1](#), p.8). Then on p. 15, "...The possibility opens up of a persuasive conception of the natural order very different from materialism – one that makes mind central, rather than a side effect of physical law."

Consciousness and Quantum Mechanics

March 13, 2018: I have started a new section "[Quantum Mechanics and Dhamma](#)," where a new interpretation of quantum mechanics is presented, discussing why a connection between quantum theory and consciousness **will not be** possible.

13.7.3 Neuroscience says there is no Free Will? – That is a Misinterpretation!

Revised April 22, 2016; revised November 15, 2019; September 6, 2020 (update at the end of the post)

Libet’s Experiment

1. In 1983, Benjamin Libet conducted an experiment **apparently showing** that our brain makes decisions before we become aware of it. When a person moves a finger, the brain activity appears to start before the person actually makes that decision.

- There have been numerous follow-up experiments since then. All those experiments seemed to confirm this observation, even though the time delays vary.
- Scientists and philosophers are quite puzzled and some are very worried that we are just zombies run by a program in our brain.

2. Here is a video clip that illustrates the basic experiment:

[WebLink: VIMEO: Neuroscience and Free Will](#)

Here is a recent youtube video on the same subject:

[WebLink: Youtube: Do humans truly have Free Will?](#)

Does Libet’s Experiment Prove There is No Free-Will?

3. Since Libet published his results, scientists and philosophers have been debating whether these experiments show that man has no free will:

[WebLink: WIKI: Neuroscience of free will](#)

- Also, see the recent post, “[Mind Is Not in the Brain](#)” and follow-up posts at “[Buddha Dhamma – A Scientific Approach](#)”

Refined Follow-Up Experiments

4. The second recent experiment is a bit more refined. Let us summarize that experiment:

- The person randomly decides (no pre-planning) to press a button at some time. Let us take this time to be TM (M for the mind) making the decision.
- He presses the button at TF, which is recorded electronically (F for using the finger to press the button).
- At the same time that he decides to press the button, he is watching the clock and makes a mental note of the “time” and after hitting the button, records that time too: TE (E for using the eye to see the time on the clock. It is important to note that TE is the time that the MIND says it saw the clock).
- Finally, his brain activity is recorded by the sensors attached to his head. Let us take the recorded start of brain activity to be TB.

Here is a summary from the researchers (you can click on the figure to expand and then hit the back button on the browser to get back):

So, the researchers conclude that since brain activity started at TB before, either (i) him pressing the button (at time TF) , or (ii) him recording the “clock” **at the time TE when he made the decision**, the brain activity started before he made the decision.

- The problem is that **they ASSUME that the time, TE, that one gets off the clock is the same as the time, TM, that the mind makes the decision to press the button.**

Explanation From Buddha Dhamma

5. In Buddha Dhamma, the mind is the precursor to every action that we do with the body. The mind's decisions are implemented by the brain. The brain is just a very sophisticated computer.

- Buddha's explanation of the mind is very thorough. The basic ideas at [“Moral Living and Fundamentals”](#) and [“Essential Abhidhamma – The Basics.”](#)
- More detailed analyses on how the mind and the brain work together at [“Buddha Dhamma – A Scientific Approach,”](#) [“The Grand Unified Theory of Dhamma”](#) and [“Mental Body – Gandhabba,”](#)
- Deeper aspects discussed in the [“Abhidhamma”](#) section.
- Some of the basic aspects are discussed below.

Brain Is The “Control Center”

6. The brain is the control center for the mechanical body to carry out both these tasks ASSIGNED BY THE MIND. The brain gets the finger to push the button and the physical eye to look at the watch.

- **Now the mind is in the *manomaya kāya* and is lined up with the heart of the physical body. The mind and the brain are connected by a signal system that is analogous to how television or radio signals are transmitted (very fast, possibly electromagnetic). The brain communicates with the five senses via the nervous system, and those communications are slower.**
- **Thus the brain gets the message from the mind to “press the button” and to “watch the clock.” Thus TB is ALWAYS later than TM.**
- Modern science has shown that, “It normally takes 0.4 – 0.6 seconds for the nervous system to activate available muscle motor units to contract,.....” (see, at the very end of the article: [WebLink: WIKI: Motor control](#)). The finger movement involves muscles in the arm, and the eye movement involves muscles in the head and the eye).
- Both actions of “watch the clock” and “press the button” are initiated by the brain (with the help of the central nervous system) per mind's instructions. The eye function circuitry can be logically thought to be a bit faster than the mechanical finger moving. Thus “watching clock” gets done first with the eye, and a

little time later the finger has pushed the button. So, here is the time sequence per Buddha Dhamma (you can click on the figure to expand and then hit the back button on the browser to get back):

6. The mind initiates all movements of the body. Here, it is the mind that starts off the brain activity, i.e., TB is later than TM. The brain activity starts AFTER the mind decides to take action because the brain needs to get the signal from the mind. The seat of the mind (*hadaya vatthu*) lies close to the physical heart, far away from the brain.

- Now the brain needs to carry out those two functions of pressing the button and look at the clock. The vision circuitry is faster. The mechanical movement of the fingers is slower (it involves moving muscles), and thus pushing the button happens a bit later.

Back to Libet's Experiment

7. **Now, let us go back to the first experiment.** The only difference here is that the person is not recording the time. He just presses the left or right button. So, there are just two events recorded now instead of three events. All we have to do is to remove TE from the above two graphs.

- It is simpler: His mind decides to push the button. The mind directs the brain to push either the left or right finger, and it takes some time for the brain to mobilize the muscles to move the finger. The time sequence is the same as in the same figure. The mind decides (TM), the brain starts working on it (TB), and the sensors attached to his head record that brain activity (wiggly line). Finally, the finger pushes the button (TF).
- As in the other experiment, **the mistake is to assume that finger pushing happens SIMULTANEOUS with the mind's decision.** But the mind only gets the brain (the computer) to initiate the complex sequence of events to work the muscles in the arm and hand to move the finger, and that is the lag time.

An Analogy

8. The body is like a mechanical instrument, say, a sophisticated tank that is used to fire at the distant object. The operator is like the mind. He aims the gun barrel using sophisticated computer-controlled circuitry and then fires the gun. He can drive the tank where ever he wants. But things do not, **and cannot**, happen simultaneously with the operator's decision. The gun needs to be moved into position before it is fired.

- The mind is controlling the body just like that. The finger (and the eye) in the above case(s) are just two instruments helping with the two tasks of pressing the button (and reading the clock), and the brain is the "control center" that oversees both those activities on the command of the mind.
- The connection between the body and the mind is explained in the post, "[Brain – Interface between Mind and Body](#)" and other posts on the *gandhabba*.

Thoughts Arise in Hadaya Vatthu, Not In The Brain

9. The “seat of the mind” (*hadaya vatthu*) is in the *manomaya kāya* (also called *gandhabba*). Thoughts arise there, not in the brain. The brain is a very sophisticated computer and controls the physical body per instructions given by the mind. At death, the *manomaya kāya* with the mind leaves the body and both the body and the brain become lifeless. See, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#),” “[Manomaya Kāya \(Gandhabba\) and the Physical Body](#),” and “[Manomaya Kāya and Out-of-Body \(OBE\) Experience](#).”

- Therefore, we are not robots controlled by a program running in our brain. The brain is just a sophisticated mechanical instrument that helps the mind with coordinating the tasks (like the computer in the tank in the above example that is helping the tank operator). But there are certain functions like breathing that the brain carries out without input from the mind. We will discuss those in an upcoming post soon.
- Any person has the POTENTIAL to do things in a scale that is unimaginable to us. We just do not realize the power of our minds; see, “[Power of the Human Mind – Introduction](#),” and the follow-up posts.

September 6, 2020 update:

There have been a few recent experiments that reduce the delay between TE and TF in #4 above. The following is the most recent paper on the subject: “[WebLink: sciencedirect.com: Sanford-Libet's Intention Reports are Invalid-2020](#)”

- To quote from the abstract of the above paper: “..We argue that Libet's intention reports are invalid and explore the phenomenology of intention in the Libet's experiment.”

13.8.1 Why Do People Enjoy Immoral Deeds? – Ditṭhi Is Key

1. Most of us feel uncomfortable when we do something immoral or unethical. For example, I remember how my heart rate went up when I stole a cookie or a candy when I was little. We all know how the heart rate goes up and the whole body gets tense when we get angry. Those are definitely not enjoyable moments.

- Therefore, immoral deeds normally make one uncomfortable and even feel like one is “on fire” in extreme cases. This is called “*tāpa*” (“burning”) in Pāli or Sinhala. In the *Satipaṭṭhāna sutta*, “*atāpi sampajāno*” means having a mindset to avoid such deeds; see, “[Satipaṭṭhāna Sutta – Structure](#).”
- When one stay away from bad deeds, the heart “cools down”; this is *Nibbāna* or “*nivana*” or “*niveema*” (“cooling down”).

2. When a thought comes to our mind (mostly triggered by seeing, hearing something related), the decision to act on it may come automatically based our “*gathi*.” If an “enemy” comes into our view when we are walking down the road, thoughts of anger may arise immediately leading to a “fire” in the heart, depending on how “bad” we perceive that person to be. Here the *cetasika* “*dosa*” dominates our thoughts. Such thoughts that come automatically to one’s mind are due to one “*gati*” and are the strongest; sometimes they are labelled as “*asankharika*” *citta*.

- Other times, one may hesitate to do an immoral act, but after deliberation or due to encouragement by others may go ahead and do it; such thoughts are called “*sasankharika*” *citta*.
- When I was thinking about stealing cookies as a child, if I did it with a prompting by a sibling, or I myself did it after not been able to overcome the greed, that would have been a “*sasankharika citta*.”
- In another example, the stronger version of “*lobha*” may be in our minds when we compete for something valuable. Here the desire is not only to acquire it, but we also do not want others to have it. Here the “fire” in the heart is more noticeable compared to the above case of desiring a cookie, which comes under “*rāga*” category.
- So, there are many shades of strength for both good and bad thoughts.
- Even if we do some of these “bad deeds” once in a while, we feel that it is wrong to do them. The stronger the bad deed, the stronger that we “feel” them.

3. However, some people seem to enjoy doing bad deeds. We have heard about people who got tens or hundreds or stab wounds when they died in knife attacks. The person who did the stabbing seem to have been enjoying it; killing of a person does not need that many stabbings. This is a rare event that we all agree is disgusting; we are horrified by the mere thought of it.

- But there are milder versions that seem “normal” to more of us.
- Some people get enjoyment watching other people suffer, say when engaged in a fight. We have seen pictures of people kicking the opponent while the opponent was down on the ground, even unconscious. This is of more common occurrence in torturing animals. Many people enjoy watching “cock fights”.
- In the even more common occurrence of fishing, most people do not “see” the suffering of a fish as it is writhing in agony hanging by the hook, or convulsing while fighting for “water to breath”. These are not immoral people, but their perception about animals has been cultivated to the point that they do not see animals as living beings.

4. *Ditṭhi* or “wrong vision” play a key role in generating feelings and desires. If we have been taught that killing animals is not an immoral thing to do, then we do not feel uncomfortable doing such an act. People enjoy fishing or hunting because they do not perceive killing fish or deer as an immoral thing to do.

- Instead of getting a “fire” in the heart, they feel a joy while fishing or hunting.
- And this is not restricted to any particular religion. I know many “Buddhists” who enjoy fishing and hunting. On the other hand, most “Buddhists” consider drinking to be immoral, even though “drinking” *per se* is not one of the *dasa akusala* (of course excessive drinking can induce one to do immoral things). It just depends on what “*diṭṭhi*” one has. [*per se* : [adverb] with respect to its inherent nature.]
- In parts of India, some people believe that washing in a particular river will help “wash away” bad merits. But then the fish in that river should be completely devoid of any bad merits, since they live their whole lives in water. Even such “apparently harmless” wrong visions still cover the mind, and prevent the mind from seeing the reality.
- The problem is that most such *diṭṭhi* propagate from generation to generation without people actually examining the sense of such beliefs.

5. *Diṭṭhi* is one of the key immoral *cetasika* (mental factors), and the opposite *sammā diṭṭhi* or *paññā* (wisdom) is of course a “moral *cetasika*.”

- A key point about *cetasika* is that moral and immoral *cetasika* DO NOT arise together in a *citta*. A thought is either moral OR immoral. A moral thought has one or more of “moral *cetasika*” such as *alobha*, *adosa*, compassion, etc. and an immoral thought has one or more of immoral *cetasika* such as *lobha*, *dosa*, shamelessness, fearlessness of wrong, etc.

6. The *cetasika* “*pīṭi*” (pronounced “peethi” or “preethi”) which means “joy” is one that can be associated with either a *kusala* or *akusala* thought. The same thing is true for the *cetasikas* *vīmaṃsā* (liking) and *virīya* (effort). **These three *cetasika* are included in the six types of *cetasika* called “particulars” that can be in either type of thought, *kusala* or *akusala*; see, “[Cetasika \(Mental Factors\)](#).”**

- Thus if one does not believe that killing fish or other animals is immoral and can lead to bad results in future lives, then a person with that *diṭṭhi* can enjoy fishing/hunting (*pīṭi*), can form a liking for it (*chanda*), and enthusiastically make preparations for fishing/hunting trips (*virīya*).
- On the other hand, someone with *sammā diṭṭhi* will definitely feel at least uncomfortable in doing such an act, will not like it, and will not strive to do such acts. He/she will gain joy by doing things with thoughts that have only moral *cetasika*, and also may have *chanda* and *virīya* associated with such activities.

7. Thus there are many types of “*micchā diṭṭhi*” that tend to make people comfortable with immoral acts.

- It must be noted that the word “*diṭṭhi*” is used in Buddha Dhamma to specifically denote *micchā diṭṭhi* or “wrong vision”. The opposite is *sammā diṭṭhi* or *paññā* (wisdom).
- Some people do not have a problem with killing other human beings if those are presumed to be “non-believers”. They have been taught all their lives that it is “good thing to do” and will pave the way to heaven.
- It is amazing how one’s mind can be made to accept certain activities as “acceptable” by conditioning over time, especially if started at young age. This is also called “brain washing”. This is why *diṭṭhi* are very difficult to break. Yet, with a determined mindset, one can break *diṭṭhi*.
- The key is to critically evaluate both sides of the particular issue at hand. Does it make sense to say one can go to heaven by killing people? Other than someone’s promise, is there any truth to that statement? Is there a doctrine that EXPLAINS HOW “killing unbelievers can pave the way to heaven?”
- The key problem is that human mind likes to “take the easy way”. It is easier to try to justify one’s vision or position rather than trying to spend time looking deeper into the issue to make an informed decision. But one needs to think about the consequences that can last for unimaginably long times.

8. Some people just enjoy killing other people; serial killers are a good example. Such people have extreme version of the *moha cetasika*; they are totally and completely morally blind.

- While most of us cannot even fathom, “how can such a person go to sleep at night?” after killing another person for fun, they actually sleep well with a content (but perverse) mind.
- People like Pol Pot and Hitler planned systematic killing of millions of people for many years. In their “*diṭṭhi*” that was the right thing to do, and many others started believing in that “*diṭṭhi*” too.

9. This is why getting rid of “*diṭṭhi*” and embracing *sammā diṭṭhi* is the first step in the mundane Eightfold Path first and then in *lokuttara* Eightfold Path; see, “[What is Unique in Buddha Dhamma?](#).”

- Having wrong kinds of vision (*diṭṭhi*) can be very dangerous, since one may not even realize that one is doing immoral things because of that *diṭṭhi*. Such *diṭṭhis* can only be removed via learning Dhamma. One becomes a *Sotāpanna* just by eliminating such wrong visions and perceptions. The three *saṃyojana* (or *saṃyojana*) that are removed at the *Sotāpanna* stage (*sathkāya diṭṭhi*, *vicikicchā*, *sīlabbata parāmāsa*) all arise due to *micchā diṭṭhi*.

10. **When we analyze at the *akusala citta* we can see why.** All immoral acts are done with just 12 types of *akusala citta*: eight based on *lobha* (greed), two based on *paṭigha* (dislike), and two based on *moha* (ignorance).

- All “*apāyagāmi*” deeds (those acts responsible for rebirth in the four lowest realms or *apāyā*) are done with the first four *lobha citta* and the *vicikicchā citta*; see, “[Akusala Citta and Akusala Vipāka Citta](#).”
- Those first four *akusala citta* are “*diṭṭhi sampayutta*” or “done with wrong views”. The cetasika *vicikicchā* also arises due to not knowing the true nature of the world, i.e., *anicca*, *dukkha*, *anatta*. Thus all five *akusala citta* that are removed at the *Sotāpanna* stage arise due to *micchā diṭṭhi*, wrong visions about the world.

11. **If one believes one is not doing an immoral act while doing that immoral act**, then he/she is likely to do it with *pīti*, *chanda*, and *virīya*., i.e., with joy, liking, and makes effort joyfully to get it done.

- Of course ignorance of law is not an excuse, as stated in the latin phrase, *Ignorantia juris non excusat*. It holds true for the natural laws stated in Buddha Dhamma as well.
- Even worse, according to Buddha Dhamma, immoral acts done with joy are the worst. That is why out of those first four *lobha citta*, those two done with joy are the absolutely worst: the “*somanassa saḥagata diṭṭhi sampayutta citta*” and the “*somanassa saḥagata diṭṭhi sampayutta sasankharika citta*.”
- In English, these mean, “**act done with joy and wrong vision** due to *gati*” and “**act done with joy and wrong vision** prompted by other factors”. The first is the worst since it comes automatically; the second *citta* arises after some deliberation, and thus has less potency, or *javana*.

12. Therefore, now we can see why some people do immoral acts with joy and make them even worse; **they simply have wrong world views or *diṭṭhi***. This is why learning Dhamma is so important.

- As the Buddha said, “My Dhamma has never been known to the world before”. So, none of us will know **precisely** what is moral or immoral, without hearing or reading about them.
- However, as humans we have the innate sense of knowing roughly what is moral/immoral. These come from our previous lives. **But depending on the environment that we grew up, we may have acquired certain “wrong visions” or “*micchā diṭṭhi*” or “*diṭṭhi*.”**
- This is why teaching children to be moral and making sure they associate with only “good friends” is critical. Those habits learned at young age can last a lifetime unless changed via a determined effort.
- And since one person’s *diṭṭhi* is different from another’s, it is absolutely critical to spend time and verify which *diṭṭhis* are the wrong to be adhered to in the long term. Many people do not believe in rebirth, but according to Buddha that is a *micchā diṭṭhi* that can lead to the adverse outcomes in the future. One needs to examine the evidence and decide for oneself. In addition to looking at , “[Evidence for Rebirth](#),” one should also examine, “[Complexity of Life and the Way to Seek “Good Rebirths”](#).”

13. Finally, the reverse is true too: Those *moral* acts that are done with joy and knowledge (wisdom) or “correct views” (*sammā diṭṭhi*) will lead to *vipāka* or outcomes with highest merits.

- Getting rid of wrong views is acquiring correct views or cultivating *sammā diṭṭhi*. The more one becomes knowledgeable in what is moral and what is not, one easily BECOMES joyful while doing moral deeds; joy and wisdom feed on each other. Of course, *chanda* and *virīya* will grow simultaneously too.
- Thus the “*somanassa sahaḡata ñāṇa sampayutta citta*” or the “**thought with joy and wisdom** that comes out automatically” is the strongest *moral citta* (or *sobhana citta*). The next highest is the “*somanassa sahaḡata ñāṇa sampayutta sasankharika citta*” or the “**thought with joy and wisdom** prompted by other factors”.
- Here, wisdom starts at the mundane *sammā diṭṭhi* level, increases as one embarks on the *Sotāpanna magga*, then *Sotāpanna phala*, and so on until becoming “fully enlightened” at the *Arahant* stage; see, “[Buddha Dhamma – In a Chart](#).”
- The power or *javana* of a *kusala citta* is enhanced with enhanced wisdom. Thus the power of a *citta* of an *Arahant* is much stronger compared to that of a *Sotāpanna*, and that of a *Sotāpanna* is much stronger compared to a normal person.
- Of course the *javana* of a *citta* with strong ignorance (*moha*) is strong too, and thus makes the deed even more potent and will bring about unbearably bad outcomes (*vipāka*).

14. Even though many people perceive Abhidhamma to be complex, if started with good basics, Abhidhamma helps clarify many complex issues very clearly. Learning about types of *citta* and how different *cetasika* play roles in one’s habits (“*gati*”) will help clarify many issues.

Next, “[Javana of a Citta – The Root of Mental Power](#)”,

13.8.2 Key to Sotāpanna Stage – Diṭṭhi and Vicikicchā

1. The attainment of the *Sotāpanna* stage accomplishes the first and foremost goal of a *Bhaddhaya*: to remove the possibility of rebirth in the lowest four realms, where suffering is unbearable.

- Even though I have analyzed different ways one can comprehend the “requirements” to be fulfilled to attain the *Sotāpanna* stage (they are all equivalent), one way to easily remember those requirements is to realize that a *Sotāpanna* has REMOVED two key immoral *cetasika*: *diṭṭhi* and *vicikicchā*.
- See, “[Cetasika \(Mental Factors\)](#)” and “[Diṭṭhi \(Wrong Views\), Sammā Diṭṭhi \(Good/Correct Views\)](#)” for introductions to the types of *cetasika* or “mental factors” that highlight one’s “*gathi*” in one’s thoughts.

2. *Cetasika* are inter-related. A good example is *dosa* (strong hate), which arises as a result of *lobha* (strong greed); actually *lobha* TURNS to *dosa*, **they do not arise together**. When someone kills another human, that is due to *dosa*; at the moment of the killing, only *dosa* was in that person’s mind. But that *dosa* likely arose due to *lobha*, strong attachment to something at an earlier time.

- And *lobha* is strong when *diṭṭhi* is strong. In the above example, one would not have formed such strong *lobha* if one did not have *diṭṭhi*, and instead would have cultivated the moral *cetasika*, *sammā diṭṭhi*, to some extent (i.e., if one knew the consequences of such a strong attachment that can lead to hate and then killing). **Thus when *diṭṭhi* is removed, *lobha* gets to weaker strength of *rāga* (attachment to sense pleasures).**
- Removal of *diṭṭhi* also leads to the reduction of *dosa* (strong hate) to *paṭigha* (tendency to get angry or irritable).
- *Vicikicchā* is related to *moha*; when *vicikicchā* is removed, *moha* (morally blind) is reduced to *avijjā* (ignorance of *anicca*, *dukkha*, *anatta*) level. As discussed in another post, *vicikicchā* is the

tendency to do unfruitful and harmful things because of a “covered mind”, i.e., not knowing the true nature.

- Those two points are stated in another way by saying that the four “*diṭṭhi sahaḡatha lobha citta*” and the “*vicikicchā citta*” are removed at the *Sotāpanna* stage (thus 5 of the 12 akusala citta are removed at the *Sotāpanna* stage). This was discussed in the post, “[Why Do People Enjoy Immoral Deeds? – Diṭṭhi Is Key.](#)”

3. In other posts I have discussed how one’s “*gathī*” are intimately linked to the kinds of *cetasika* that dominate in one’s mind. The “*apāyagāmī gathī*” or those habits or tendencies of a person that makes the person eligible to born in the *apāyā* (the lowest four realms) are mainly in several key immoral *cetasika*: *lobha*, *dosa*, *diṭṭhi*, *moha*, and *vicikicchā*.

- At the *Sotāpanna* stage, the *cetasika* of *diṭṭhi* and *vicikicchā* are REMOVED; then *lobha* is reduced to *rāga* (which can be separated out as *kāma rāga*, *rūpa rāga*, *arūpa rāga*); *dosa* is reduced to *paṭigha*, and *moha* reduced to *avijjā*.
- At the *Sakadāgāmī* stage, from those remaining above, *kāma rāga* and *paṭigha* are REDUCED.
- Those two, *kāma rāga* and *paṭigha*, are REMOVED at the *Anāgāmī* stage.
- It is only at the *Arahant* stage that the remaining strength of those key immoral *cetasika* of *lobha* and *moha* (i.e., *rūpa rāga*, *arūpa rāga*, *avijjā*) together with all other immoral *cetasika* are removed.

4. As one sheds these immoral *cetasika* and thus “immoral *gathī*,” one automatically cultivates “moral *gathī*” with moral *cetasika*. We saw above that when *diṭṭhi* diminishes, *sammā diṭṭhi* (which is the same as the *paññā* or wisdom *cetasika*) grows.

- In the same way, as *vicikicchā* is reduced, *saddhā* (faith) *cetasika* grows. This is why a *Sotāpanna* has “unbreakable” faith (*saddhā*) in Buddha, Dhamma, and Saṅgha; *vicikicchā* has been removed. However, that *saddhā* comes through not via blind faith, but via understanding.
- Still, paying homage to Buddha, Dhamma, Saṅgha, via *Tiratana vanadana* or listening to *pirith* helps build *saddhā*; see, “[Buddhist Chanting – Introduction.](#)” This is why it is said that one needs to cultivate *saddhā* and *paññā* together.
- Another thing to remember is that while *alobha* (non-greed) and *adosa* (non-hate) are moral *cetasika* opposing *lobha* and *dosa*, *amoha* is NOT actually a *cetasika*. Unlike *alobha* and *adosa*, *amoha* is not cultivated; *amoha* is merely the absence of *moha*.
- Instead, what is cultivated is *paññā* (wisdom) or the *sammā diṭṭhi cetasika*. And that requires understanding of *anicca*, *dukkha*, *anatta*. This is why *paññā* (wisdom) has nothing to do with “book knowledge”, but is all about comprehending the “true nature of this world of 31 realms”. I will have another post on this important point.

5. Another illuminating way to analyze is to look at the removal of the *āsava*s at each stage. The four types of *āsava*s are: *ditthasava* (*āsava* for *diṭṭhi*), *kamasava* (*āsava* for sense pleasures, almost the same as *kāma rāga*), *bhavasava* (*āsava* for *bhava* or existence, which is almost the same as *rūpa rāga* plus *arūpa rāga*), and *avijjasava* (*āsava* for ignorance). Of course “*āsavakkhaya*” or removal of all *āsava*s is *Nibbāna*.

- As we can see (by comparing with #3 above), *ditthasava* is removed at the *Sotāpanna* stage; *kamasava* is reduced at the *Sakadāgāmī* stage and removed at the *Anāgāmī* stage; *bhavasava* and *avijjasava* removed at the *Arahant* stage.
- Thus we can also see that it is the combination of *ditthasava* and *kamasava* that give rise to strong greed (*lobha*) and strong hate (*dosa*). When one loses *ditthasava* by comprehending the true nature of this world, *lobha* and *dosa* are reduced to *kāma rāga* and *paṭigha* (which constitute *kamasava*).
- While such different analyses will be helpful for someone who has been studying them, all these different terms could be confusing to those who are new to these terms. But one will get used to these terms with

time, and it is important to understand what they mean (not just to memorize) in the long term. With usage, they WILL become familiar.

- In the days of the Buddha, Buddha Dhamma was called “*vibhangavādi*” or “doctrine that systematically analyzes by parts”. Just like medical students learn about the human body by dissecting dead bodies, it is informative to look at the mind by analyzing it in different ways. And all types of analyses are inter-consistent.

6. A *Sotāpanna*, by comprehending *anicca*, *dukkha*, *anatta* to a certain extent, REMOVES *diṭṭhi* (i.e., achieves *diṭṭhivissuddhi*) and cultivates *sammā diṭṭhi* to a certain level. And when that happens, the strength of the *moha cetasika* is reduced to just *avijjā* level, and also the *vicikicchā cetasika* is REMOVED. Simultaneously, *lobha* is REDUCED to *rāga*, which then are removed in stages at higher stages of *Nibbāna* as stated in #3 above.

- The above paragraph briefly summarizes what happens at the *Sotāpanna* stage. It may seem simple, but it requires lot of effort to discipline the mind to get to that stage, mostly via learning and contemplating Dhamma.
- One has reduced the strength of attachment to “worldly things” to the extent that one will NOT do certain immoral actions no matter how much wealth or sense pleasure is at stake. One WILL NOT act with *vicikicchā*: there is no hesitation in trying to decide, one KNOWS such an act will lead to the birth in the *apāyā*. It is not something one has to think about at that moment; it comes out AUTOMATICALLY, because of such “*apāyagāmī gathī*” have been PERMANENTLY removed.
- Thus by getting to know some properties of key *cetasika* we can get an idea of how our minds work, and get an idea why different people respond to the same external influences in different ways. **It is because their “*gathī*” or dominant *cetasika* are different.**

7. Now let us take some examples. *Diṭṭhi* is at the forefront because one’s “views” determines what one has gotten used to or one is comfortable with.

- If we take the *diṭṭhi* (or view) that says if one bathes in a certain river one could wash away one’s sins. This does not appear to be a strong *diṭṭhi*, but it is dangerous one: then one can do all sorts of immoral deeds all day long and then take a bath to “wash away” all those sins and thus get rid of any *kamma vipāka*. Yet, this *diṭṭhi* is something that has been carried from generation to generation in parts of India.
- Many people say, “I don’t do immoral things and even help out others, therefore, bad things will not happen to me”. That is a *diṭṭhi* too, because that person does not realize that he/she most certainly has done innumerable bad things in previous lives. That *diṭṭhi* therefore arises due to not believing in rebirth. **The “cause and effect” is a valid argument, but that argument holds only within the broader world view, that this is not the only life we have had.**

8. There are several key *diṭṭhis* that are common in Buddhist countries.

- Many “Buddhists” believe that taking and obeying the eight precepts on Full Moon days is enough to attain *Nibbāna*. There are old ladies in Sri Lanka who do not miss a single Full Moon day and dutifully take those precepts. But their minds are filled with ignorance and some of them mostly get together and gossip all day.
- While taking those precepts and mindfully disciplining oneself and meditating for a whole day is an excellent way to practice, just nominally taking precepts is not going to do anything to cleanse one’s mind.
- Then there is the perception that taking even a glass of wine (or some mild alcoholic beverage) is highly immoral. While it is best to avoid taking any kind of alcohol, drinking a glass of wine or beer is not a “*akusala kamma*.” Of course if one gets addicted or intoxicated, then one could be led to do *akusala kamma*. Actually, when one gains wisdom via learning Dhamma, **the tendency to crave for alcohol or anything else gradually diminishes.**

- Rituals are prevalent in most Buddhist countries. People may do all sorts of immoral deeds (gossiping, slandering, using harsh words, fishing, hunting, are a few examples) during the day and at the end of the day, they light a lamp for the Buddha, say a few verses (“*gatha*”), and believe that is all they need to do.
- All these come under one of the three *sanyojana*, “*silabbata paramasa*” (*ditṭhi* that says following rituals or set guidelines can lead to *Nibbāna*), is removed at the *Sotāpanna* stage.
- But it must be emphasized that most of such procedures CAN BE very effective in calming the mind and building *saddhā* (both of which then help cultivate wisdom by being able to comprehend Dhamma), if done properly while making an effort to cleanse one’s mind; see, “[Buddhist Chanting – Introduction](#).”

9. We can also see that *vicikicchā* (tendency to do inappropriate/immoral/dangerous deeds) also arises because one is not aware of how *kamma/kamma vipāka* operate and has not comprehended *anicca*, *dukkha*, *anatta*.

- It is easy for outside influences to change the mind of someone with strong *vicikicchā* to do bad things. Since children in general are unaware of what is right and what is wrong, it is easy to manipulate their minds. This is why making sure children grow up in environments that are conducive to moral behavior is very important.
- Even adults, who are not aware of the consequences of immoral behavior have high levels of *vicikicchā*. They tend to only look at the immediate gratifications of an act rather than to have a long-term perspective.
- Learning Dhamma is the only guaranteed way to remove *vicikicchā*.

10. Some people tend to think that it is better not to even contemplate on bad consequences of bad actions, or to learn WHY bad actions are bound to lead to bad outcomes. The thinking is “as long as I don’t think about such depressing things, I will feel fine”.

- Just like not knowing that a certain action is unlawful is not a valid argument in a court of law, ignorance of the Nature’s laws is not a valid excuse. Sometimes one can get away when a law is broken by telling more lies and changing the decision of a jury. **But in the Nature’s court, it is one’s mind that makes the decisions and one cannot fool one’s own mind.**
- **This is why *ditṭhis* can be broken only by cleansing one’s mind.** One cleanses one’s mind by first learning about *kamma* and *kamma vipāka* first and THEN reading about *anicca*, *dukkha*, *anatta*, and THEN comprehending the true meanings of those words, i.e., by comprehending the true nature of this world; see, “[Buddha Dhamma – In a Chart](#)” and “[How to Cultivate the Anicca Saññā](#).”
- **One’s own mind needs to realize futility of doing immoral deeds, not just because they are bound to bring thousand-fold bad outcomes, but also because there is “no point”, “no real benefit” of doing bad things to fulfil one’s sense desires or to “own valuable things”;** such sense pleasures or valuable things do not last in the long term. But the consequences can linger on for long times.

11. As I pointed out in “[Why do People Enjoy Immoral Deeds? – Ditṭhi is Key](#),” we all have *ditṭhis* that have been cultivated in us by the environment that we grew up in, whether it is cultural, social, or religious. And Buddhists are no exception. We all need to critically evaluate such *ditṭhis* and sort out which ones are bad for oneself. Buddha has clearly stated which *ditṭhis* are bad: “[Three Kinds of Ditṭhi, Eightfold Paths, and Samādhi](#).”

13.8.3 The Origin of Matter – *Suddhaṭṭhaka*

November 27,2015; Revised December 17, 2017; May 17, 2019; August 21, 2019; February 24, 2020; December 24, 2020; re-written August 31, 2022; October 29, 2022 (#8 added); March 7, 2023 (#7 – #9 revised)

Introduction

1. *Suddhaṭṭhaka* is not even mentioned in even many *Theravāda* Texts. It is discussed in “[WebLink: PDF-file: Bhikkhu Bodhi-Comprehensive Manual of Abhidhamma](#),” by Bhikkhu Bodhi (2000); see pp. 246, 253-254. However, it does not have a more profound explanation given in this post. The explanation in #8 and #9 was given by Waharaka *Thero* and cannot be found directly, even in the *Tipiṭaka*. However, it is possible to “make connections” and clarify such issues as long as it is consistent with the *Tipiṭaka*. That is discussed in “[Interpretation of the Tipiṭaka – Gandhabba Example](#).”

- Please don’t read it, unless you have thought about the basic concepts of “*saṇ*,” *gati* (pronounced “*gathi*” as in “theme”), *āśava*, *Paticca Samuppāda*, etc. It may not make much sense, and thus it could discourage people from proceeding any further, thinking, “this stuff does not make sense.”
- On the other hand, for those who understand those concepts, this could help them gain more insight.
- The picture will become increasingly apparent as I publish more posts on this issue. Buddha Dhamma’s value will also become apparent, which is the best way to cultivate *saddhā* (faith based on understanding)
- This topic is discussed in detail in the “[Nāma & Rūpa to Nāmarūpa](#)” subsection of the “[Living Dhamma](#)” section.

Origin of Matter – Scientific Theory

2. If we accept that all matter has been created somehow, what is the origin of matter?

- Scientists have no clear explanation for this (November 2015). They say they can calculate the universe’s evolution from a fraction of a second after the Big Bang, but physics cannot explain what happened before the Big Bang.
- Of course, the “Big Bang Theory” has not yet been fully confirmed, even though most scientists believe it.
- Still, some scientists do not believe everything “popped up” suddenly in the Big Bang. See, for example, “Endless Universe – Beyond the Big Bang” by P. J. Steinhardt and N. Turok (2007).
- By the way, English astronomer Fred Hoyle coined the term “Big Bang” to ridicule the concept. See “[WebLink: en.wikipedia.org: Fred Hoyle – Rejection of the Big Bang](#).”

Buddha Dhamma – Universe Evolves

3. The Buddha discouraged people from investigating the universe in detail. However, he has taught that uncountable “planetary systems” like our Solar system exist in the universe. That model will have living beings in existence somewhere in the 31 realms. This has been discussed in detail in a few *suttā*, especially the *Aggañña Sutta* (DN 27). I have written an introductory post: “[Buddhism and Evolution – Aggañña Sutta \(DN 27\)](#)”. The following are some key points.

- (i) The universe has no traceable beginning, just like life.
- (ii) The universe has “clusters or groups” of stars. Our Solar system is one of 10,000 “star systems” (*cakkavāla* or planetary systems; *chakrawāta* in Sinhala). There is an infinite number of such *cakkavāla* in the universe.
- (iii) When a star in the vicinity of our Sun blows up in a few billion years, that blast will destroy 10,000 other star systems in the neighborhood. In modern science, such a “star explosion” has a particular name, a supernova.
- (iv) Such a cluster of 10,000 world-systems blows up from time to time in the universe. Again, scientists observe such supernovae every year.
- (v) Science does not know yet that those destroyed star systems re-form over billions of years.

4. Whatever the model that science eventually clarifies WILL BE consistent with Buddha Dhamma.

- Thus, the universe did not start with a “Big Bang,” as many scientists believe right now. Remember that only 100 or so years ago, scientists thought the universe was in a steady state. Scientific theories change to “fit the existing data.”
- Just 400 years ago, “science” believed in the geocentric model of the universe. The Earth was in the middle of the universe, and the stars were embedded in a celestial sphere around it far above. See [“WebLink: wikipedia.org: Geocentric model.”](http://web.archive.org/web/20160305120000/http://wikipedia.org: Geocentric model)
- But pure Buddha Dhamma has not changed since Buddha Gotama taught it 2500 years ago; see, [“Historical Background.”](#)
- We will slowly go through the *Aggañña sutta* because that needs enough background material. I expect this topic will take us several years and many essays to complete.

***Suddhaṭṭhaka* – The Smallest Unit of Matter**

5. Here, we will discuss only the origin of the smallest unit of matter, called a “*suddhaṭṭhaka*.” (sometimes written as *suddhāshtaka*).

- This unit of matter is a billion times smaller than “an atom” in modern science. One time, not long ago, science believed that an atom was the smallest unit of matter. But they are composites of many “elementary particles.” Even many of those “elementary particles” are shown to have more structure! There is no end to how smaller a “basic unit of matter” can get, i.e., there is no clear distinction between matter and energy.
- For example, a “Higgs boson” is just a packet of energy. The light was in the energy category; see [“Photons Are Particles Not Waves.”](#)
- Matter and energy are essentially the same, related by the famous equation, $E \text{ (energy)} = m \text{ (mass)} \times c^2$, where c is the light speed. Thus any small unit of matter is indistinguishable from a “packet of energy.” For example, the light comes in “packets” called photons. Thus photon belongs to matter in this sense.
- Thus, in science, the distinction between “matter” and “energy” is blurred at this fundamental level.

6. **However, the Buddha made a clear “demarcation boundary” between matter (*rūpa*) and kammic energy that “bears things” (*dhammā*.)** *Dhammā* (or *kamma bīja/kamma bhava*) arise via *Paṭicca Samuppāda* (“*avijjā paccayā saṅkhāra*” leading to “*upādāna paccayā bhavo*.”) See [“What are Rūpa? – Dhammā are Rūpa too!”](#)

A *suddhaṭṭhaka* is a “packet of energy” and the basic unit of matter. It is much smaller in energy compared to a light photon. A single light photon would be made of a large number of *suddhaṭṭhaka*.

- A *suddhaṭṭhaka*, being a *saṅkhata*, is created by the mind. The Buddha said, [“Manopubbangamā Dhammā..”](#), i.e., “everything has a mind as the precursor...”
- However, almost all of the matter around us was created by this “mental process” long ago. That is the story in the *Aggañña Sutta*: [“Buddhism and Evolution – Aggañña Sutta \(DN 27\).”](#) At present, *suddhaṭṭhaka* are being created by us (via *javana citta*), but in very minute quantities.
- Anyone with higher *abhiññā* powers can create significant matter, like a flower or larger entities. Matter (at the level of *suddhaṭṭhaka*) is created by *javana citta*. And someone with *abhiññā* powers can maintain a *citta vīthi* with *javana citta* flowing continuously to generate “significant amounts of matter.” See the end of the post, [“Citta Vīthi – Processing of Sense Inputs.”](#)

What is a *Suddhaṭṭhaka*? Roles of *Avijjā* and *Taṇhā*

7. *Suddhaṭṭhaka* (“*suddha*” for “pure” or fundamental” + “*ṭṭha*” or “eight”) means a unit of matter consisting of eight fundamental entities (usually translated as the “pure octad,” for example, in Bhikkhu Bodhi’s book per #1 above).

- Four of these belong to the “*bhūta*” stage of *pathavi*, *āpo*, *tejo*, and *vāyo* arising due to *avijjā*. These are the fundamental units of matter, and they cannot be detected by themselves. It may be hard to believe for many at this stage, but those arise due to our “*gati*” that I have discussed in several posts; see the introductory post: “[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavā\)](#).” By the way, the removal of “*āsava*” and “*gati*” lead to *Nibbāna*: “[The Way to Nibbāna – Removal of Āsavā](#).” One needs to understand these concepts to grasp the material in this post.
- The mind first creates the four *bhūta* with four basic “*gati*” of humans: “*thada gatiya*” or “තද ගතිය” (in Sinhala) means the “coarseness,” corresponding to *pathavi*; a defiled mind is “hard” and “coarse” and correspond to “*pathavi*” nature.
- The word *āpo* comes from the tendency to “attach or get attracted to worldly things” (“*bandena gatiya*” or “බැඳෙන ගතිය” in Sinhala) means the “bind together,” which leads to liquidity in science). *Tejo* comes from “fiery or energetic” (“*théjas gati*” or “තෙජස් ගතිය” in Sinhala), and *vāyo* refers to “motion/vacillation” (“*salena gatiya*” or “සලන ගතිය” in Sinhala). They are all created in *javana citta* that arise in mind in minute quantities that cannot be detected. However, *yogis* with *abhiññā* powers can generate large amounts of matter like a flower.

8. There is a deeper explanation: According to the above explanations, *āpo*, *pathavi*, and *tejo* can be attributed to *lobha*, *dosa*, and *moha*. Vacillation in *vāyo* represents uncertainty — representing mundane *alobha*, *adosa*, *amoha*. Mundane *amoha* is the ignorance of the Four Noble Truths. See “[Six Root Causes – Loka Samudaya \(Arising of Suffering\) and Loka Nirodhaya \(Nibbāna\)](#).”

- Thus, we can say that *vāyo* is the “better element” compared to *āpo*, *pathavi*, and *tejo*. The latter three can be attributed to the “*kāma loka*,” and *vāyo* can be taken to represent transcending the *kāma loka*. *Jhānā* represent the mental states in *Brahma* realms that lie above *kāma loka*.
- Thus, we can connect to *anāriya yogis* getting into *anāriya jhāna* with breath meditation (by temporarily overcoming *lobha*, *dosa*, and *moha*, i.e., without removing *anusaya*.)

9. **The mind creates four types of *gati* (*pathavi*, *āpo*, *tejo*, and *vāyo*) due to *avijjā* or ignorance.** We like to have possession of things made out of these units because we do not comprehend the “unfruitful nature” of such impermanent things.

- **The craving for material things leads to four more *gati* due to *taṇhā*.** Due to our tendency to think highly (“*varnanā karanava*” in Sinhala), another *gati* of “*vaṇṇa*” is created as different manifestations of the four primary *bhūta* of *pathavi*, *āpo*, *tejo*, and *vāyo*. Similarly, three more units of *gandha*, *rasa*, and *ojā* are created due to *taṇhā*. Those correspond to our desire to be in touch with them and be “fooled” (*gandha*), keep them close (*rasa*), and re-generate them (*ojā*). [*rasa* : [m.] taste; juice; flavour; quick-silver. *oja* : [m.; nt.] nutritive essence; juice. || *ojā* [f.], nutritive essence; juice. *rasa* : [adj.] short; dwarfish; stunted.]
- It will take too much space to explain these in detail, but I hope you get the basic idea. Further information at “[Bhūta and Yathābhūta – What Do They Really Mean](#).” See #5 there, clarifying the transition from “*gati*” to “*bhūta*” to “*mahā bhūta*” stages.

***Suddhaṭṭhaka* – Eight Components Do Not Arise Individually**

10. **Therefore, four basic units of *pathavi*, *āpo*, *tejo*, and *vāyo*, arise due to *avijjā*, and the other four of *vaṇṇa*, *gandha*, *rasa*, and *oja* arise due to *taṇhā*.**

- These eight components never arise in isolation and thus are called “*avinibbhoga rūpa*.” They always rise together and all eight are there in any *suddhaṭṭhaka*. Each component’s relative “amounts” can vary; thus, some entities may be dominated by one of the eight. For example, *paṭhavī* is dominant in a stone and *āpo* is dominant in water. Even then, all eight are present to some extent. [*avinibbhoga* : [adj.] indistinct; that cannot be separated.]

- This very fundamental level is called the “*bhūta*” stage. *Bhūta* is another name for “ghosts” because of their elusive nature. They can never be detected and only be “seen” by a Buddha. The Buddha explained this to *Mahā Brahma*, who thought he knew everything about the world: “[WebLink: suttacentral: Brahmanimantanika Sutta \(Majjhima Nikāya 49\)](#).” I have discussed that part of the *sutta* in #12 of “[Anidassana Viññāna – What It Really Means](#).”
- And a *suddhaṭṭhaka* can never be divided; thus they are called “*avinibbhoga rūpa kalāpa*.”
- Those who understand the Sinhala language can listen to the following discourse by Waharaka Thero: “සුද්ධඤ්ඤා-කර්මශක්තිය සහ භව ශක්තිය”
[WebLink: Listen to the audio of CD063-16 වන සංග්‍රහයෙන් - සුද්ධඤ්ඤා-කර්ම ශක්තිය සහ භව ශක්තිය](#)

Critical Role of *Gati*

11. Thus, “*gati*” leads to “*bhūta*,” the first phase of *rūpa* that can be seen (only by Buddha). That is the *suddhaṭṭhaka* stage. That is where mental energy is converted to matter at the fundamental stage. Just keep that in mind as we proceed.

- It may be hard to believe for many at this stage, but those arise due to our “*gati*” that I have discussed in many posts. See the introductory post: “[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavās\)](#).” By the way, the removal of “*āsava*” and “*gati*” lead to *Nibbāna*: “[The Way to Nibbāna – Removal of Āsavā](#).” One needs to understand these concepts to grasp the material in this post.
- More details in “[Gati \(Habits/Character\) Determine Births – Saṃsappanīya Sutta](#)” and “[Gati, Bhava, and Jāti](#).”

Stages of Matter – *Bhūta*, *Mahā Bhūta*, *Dhātu*

12. When enormous numbers of *suddhaṭṭhaka* fuse, they get to a more condensed state of “*mahā bhūta*.” The subtle bodies of *Brahmā* and some *gandhabbā* are made of *mahā bhūta*. This level of “solidification” can be compared (in energy) to electromagnetic radiation at the long-wavelength range; thus, we cannot “see” those entities with our eyes.

- Only when vast amounts of *mahā bhūta* fuse and become even more condensed can we see them. In this highly condensed state, the matter is called “*dhātu*.” Bodies of *devas* are made of finer *dhātu*. That is why we cannot see *devas*, but *Brahmā* can see them.
- Thus our bodies are made of denser *dhātu*, which we can see. That is why solid objects are called “*pathavi dhātu*.” *Suddhaṭṭhaka* in such solid objects predominantly has *pathavi*. In liquids, things are bound together and flow together because they mostly have *āpo dhātu*. Not only fire but also those objects that have an “energetic appearance,” have more *tejo*. And not only the wind but also things prone to move, have more *vāyo*.
- For details: “[Bhūta and Yathābhūta – What Do They Really Mean](#).”

Other Implications

13. Therefore, we can see that *pathavi*, *āpo*, *tejo*, and *vāyo* have much deeper meanings than the earth, water, fire, and wind. Why did the ancient Greeks also use the same terms? Hinduism also uses terms like *karma* (the Sanskrit word for *kamma*), *Nirvana* (the Sanskrit word for *Nibbāna*), etc. The teachings of the previous Buddha, Buddha Kassapa, got distorted with time to become *Vedic* teachings. I need to write about that but see #8 of “[Arogyā Paramā Lābhā](#).”

- There were three Buddhas in this *mahā kappa* (i.e., during the existence of our Solar system) before the Buddha Gotama; that is how those terms came into usage before Buddha Gotama. The previous Buddhas’ concepts were transmitted down through successive generations, but the true meanings got lost.

- Human history is much longer than tens of thousands of years, as believed by many today. Whole continents can submerge, wiping out entire populations. That is not considered seriously yet, but there is some evidence: see, [WebLink: wiki: Submerged continent](#).
- That is a topic to be discussed later when more evidence becomes available. It will be proven that one region that has not changed since the formation of the Earth is Asia encompassing Sri Lanka, India, and China. **Archeologists should focus more on that region rather than on Africa.** See [“Ancient teeth found in China challenge modern human migration theory.”](#)

Three Buddhas Before Buddha Gotama in the Present Eon

14. As I mentioned above, there were three Buddhas before Buddha's Gotama. That is how key terms like *pathavi*, *āpo*, *tejo*, *vāyo*, *kamma*, and *Nibbāna* (*nirvāna*) have been used even before the Buddha Gotama. They had been transmitted through generations, but their true meanings had been lost.

- Losing the true meanings in the *Tipiṭaka* happened at least a few times, even during this Buddha *Sāsana*, within the past 2500 years. The best example is the misinterpretation of *san*, *saṃsāra*, *anicca*, and *anatta* during just the past hundreds of years; see, [“What is ‘Saṇ’? Meaning of Sansāra \(or Saṃsāra\)”](#) and [“Anicca, Dukkha, Anatta – Wrong Interpretations.”](#)
- **But the Buddha Gotama has said that his *Buddha Sāsana* will last for 5000 years. We are only halfway through. That is why it is making a comeback now. And this time, it will have staying power due to the presence of the internet. That is one reason we should all be forever grateful to modern science, much more than all other technological wonders it has brought.**

15. Buddha Dhamma is profound, but once one gets some traction, it can be an exhilarating experience to “dig deeper.”

13.8.4 What are Dhamma? – A Deeper Analysis

April 15, 2016; revised November 5, 2017; February 9, 2018; December 27, 2022

1. This is an advanced topic (yet, hopefully, made easy even for those who are not into Abhidhamma). Please don't hesitate to comment if something is not clear. A simpler version is at: [“What are rūpa? – Dhamma are rūpa too!”](#)

- In contrast to touching, smelling, and tasting, we do not directly “touch” the external world (matter) with our eyes, ears, or mind.
- While we experience the “outside world” as it is (or objectively) with our five physical senses, what we interact with our minds are our own “perceptions, feelings, plans, and hopes” for that external world.
- We will get into more details on those two aspects in the future, but in this post, we will look at what “*dhammā*” are in relation to the mind. That will help us address those other two issues in the future.
- **It is to be noted that *dhammā* are rūpa below the *suddhaṭṭhaka* stage. On the other hand, *dhamma*, as in Buddha Dhamma or Abhidhamma refers to Buddha's teachings.**
- As I mentioned in the [“Abhidhamma – Introduction,”](#) I very much want to make Abhidhamma easy to grasp for anyone. I also want to highlight that the Buddha Dhamma is well ahead of science (quantum mechanics) in understanding our material world; science has not even begun to explore the mind.

2. Existence in this world of 31 realms is maintained via our attachments to “things” in this world. These “things” are *rūpa*.

- When a mind makes contact with an external *rūpa*, it may generate a brief sense enjoyments called *assāda*; see, “[Assāda, Ādinava, Nissarana](#).” Since we perceive these sense contacts to be long-lasting and enjoyable (and ignore the sufferings that we go through to acquire them), we willingly desire such sensory pleasures.
- **However, any *rūpa* that arises is subjected to unexpected change (*vipariṇāma*) and eventual decay and destruction, which is the basis of *anicca* nature.**

3. Another factor that we have not discussed much in detail is that *rūpa* has different levels of texture or solidity.

- *Rūpa* that we experience in the human realms (and those realms below us) are the densest form called *dhātu*. The *deva* realms above us have finer *dhātu* that we cannot see. In the *rūpa lokas*, *rupi Brahmā* have even finer *rūpa* called *mahā bhūta*. And in the *arūpa loka*, there are just traces of *bhūta* (just the *hadaya vatthu*) made of the smallest unit of matter called *suddhatṭhaka*, and of course much finer *gati* (or *gathī*).
- You may want to review the concepts discussed in the following posts: “[What Are Rūpa? \(Relation to Nibbāna\)](#),” “[The Origin of Matter – Suddhatṭhaka](#).”

4. It is conventional knowledge is that we experience the external world with our five physical senses: We see with our eyes, hear with the ears, smell with the nose, taste with the tongue, and touch things with our physical bodies.

- Is that all one experience? Imagine being in a dark chamber isolated from the rest of the world. A good example is a punishment by the military called solitary confinement, especially in the old days. One is kept in an isolated dark cell for many hours.
- Does such a person experience the outside world? Of course. He/she can think about all sorts of things: recall past events, think about the future, recall any place that he has been to, etc.
- We do this any given day, not only by recalling past experiences, but also by imagining desired future events.

5. Sense contacts other than the five physical senses are due to the sixth sense: the mind. One is unaware of the external world only when one is unconscious.

- So, what are the *rūpa* that we experience with our minds? These are *dhamma*! As stated in the phrase, “*manañca paṭicca dhamme ca uppajjati manoviññāṇam*,” contacts of *dhamma* with the *mana indriya* leads to *mano viññāṇa*.

6. The arising of *viññāṇa* due to different types of sensory inputs is described in *abhidhamma* (and also in “[WebLink: suttacentral: Cha Chakka Sutta \(MN 148\)](#)”) as:

“*cakkhuñca paṭicca rūpe ca uppajjati cakkhuviññāṇam*,”

“*sotañca paṭicca sadde ca uppajjati sotaviññāṇam*,”

“*ghāṇañca paṭicca gandhe ca uppajjati ghānaviññāṇam*,”

“*jivhañca paṭicca rase ca uppajjati jivhāviññāṇam*,”

“*kāyañca paṭicca phoṭṭhabbe ca uppajjati kāyaviññāṇam*,” and

“*manañca paṭicca dhamme ca uppajjati manoviññāṇam*”

- Thus it is clear that *mano viññāṇa* arise when *dhammā* makes contact with the *mana indriya*, just like *cakkhu viññāṇa* arises when (*vaṇṇa*) *rūpa* or light makes contact with the *cakkhu indriya* (eyes) or *sota viññāṇa* arise when *sadda rūpa* (sound waves) make contact with the *sota indriya* (ears).

- *Kāya viññāṇa* result from contacts that are the most coarse (*phoṭṭhabba* or touch due to *dhātu*), and *mano viññāṇa* results from contacts that are extremely fine, dhamma.

7. Thus, we can categorize our six types of contacts with the external world according to the “coarseness” of the contacts.

- **The body contacts (touch), taste, and smell are the coarse contacts**; they involve direct touching (*pottabba*), and those involve solid particulates (taste and smell).
- **Vision involves light particles (photons) interacting with the physical eye.** The light was not even considered a particle until Einstein, Compton and others proved that in the early 1920s.
- In the language of physics, **sound involves phonons having even less energy than light photons**, i.e., they are “even softer”.

8. We can also see that the **sensor elements in the body** also get less and less coarse in that order. It must be noted that the sensing elements in the ear are not the ear we see, but a very sensitive area deep inside the ear.

- According to Buddha Dhamma (confirmed by science), two things respond to each other and last longer when in heavy usage, if they have similar densities. For example, if a steel rod rubs against a wooden rod, the wooden rod will soon wear out. But two steel rods (or two wooden rods) can be rubbed against each for long.
- Thus going from touch, smell, taste, sight, and hearing, both the external influences — touch, tasty things, smells, light (photons), sound (phonons) — and the sense elements (body, tongue, nose, eyes, ears) become finer in that order.

9. **The finest sensing element is the “*mana indriya*” inside the brain.** It is likely to be one of the following: the thalamus, amygdala, or hippocampus. I have not had enough time to investigate the functions of these sensitive elements of the brain, but according to Buddha Dhamma, the “*mana indriya*” is inside the brain and is analogous to the eyes or the ears; more details will become clear as we discuss below.

- What come down in the legend as the “third eye” is this “*mana indriya*.” It is supposed to be located behind the forehead.
- **The *rūpa* that come into contact with the *mana indriya* are finer than a *suddhaṭṭhaka*, and are still in the “*gati*” stage, but they are on the way to becoming *suddhaṭṭhaka*.** They are not coarse enough to be “seeing” even with *abhiññā* powers, and do not make contact with the other five coarse senses. Thus they are, “*anidassanaappaṭighaṃ dhammāyatanapariyāpannaṃ*.” See, the last verse of “[WebLink: suttacentral: 2.2.2. Mātikā](#)” in *Dhammasaṅgaṇī* of the *Tipiṭaka*.
- Here, “*anidassana*” means “cannot be seen” and “*appaṭigha*” means “cannot be touched or sensed with even the finest instrument”. And, “*dhammāyatana pariyāpanna rūpaṃ*” means “belongs to *dhammāyatana*”.

10. In the post, “[The Origin of Matter – Suddhatṭhaka](#),” we discussed how the smallest material element, a ***suddhaṭṭhaka*, is created by the mind with origins in four basic “*gati*” of humans that arise due to *avijjā*:** “*thada gati*” (in Sinhala) means the “coarseness”, corresponding to *pathavi*; “*bandena gati*” means the “bind together” which leads to liquidity corresponding to *āpo*; “*thejas gati*” means the “fiery or energetic”, corresponding to *tejo*; and, “*salena gati*” means the “motion”, corresponding to *vāyo*.

- **Craving for these material things leads to four more *gati* due to *taṇhā*:** Due to our tendency to think highly (“*varanā karanava*” in Sinhala), another *gati* of “*vaṇṇa*” is created as different manifestations of the *sātara mahā bhūta*. Similarly, three more units, *gandha*, *rasa*, and *oja*, are created due to *taṇhā* corresponding to our desire to be in touch with them, keep them close (*rassa*), and regenerate them. [*rassa*: [adj.] short; dwarfish; stunted]

11. Before these eight inseparable units solidify into what we call matter, there is the precursor stage of *gati*: cultivation of *gati* leads to *bhūta*, which are in the *suddhaṭṭhaka* stage. Further solidification of *bhūta* leads to *mahā bhūta*. The fine *rūpa* of *Brahmā* is composed of *mahā bhūta*.

- The *gati* stage of *rūpa* — the origins of *rūpa* — are also called “*mano rūpa*”: these are really what we visualize in our minds. We can visualize scenes from the past, and those are *mano rūpa*. In the process of making *gati*, we constantly think about associated material things; those are *mano rūpa*.

12. *Mahā bhūta*, upon further condensation, become *dhātu*. The bodies of *devas* are made of finer *dhātu*, and our bodies — as well as all material things we see — are composed of denser *dhātu*.

- Therefore, the origin of all matter is *gati*! But our *gati* (of normal humans) do not lead to the formation of significant amounts of even *suddhaṭṭhaka*. So, we still have a long way to go before explaining how these solid objects in our world were formed as described in the *Aggañña Sutta*.

13. Just like the eye receives visual information or the ear the sounds, the “*mana indriya*” receives “*dhammā*.” And *dhammā* are much finer than light or sound *rūpa*. All five physical senses deal with signals transmitted via solidified particles made out of *suddhaṭṭhaka*, but *dhammā* are just energy, below what we call “matter”. Even most physicists do not consider light as matter or “particles”; I will write a post on why light photons are indeed particles according to quantum mechanics.

- As we discussed in the post, “[The Origin of Matter – Suddhaṭṭhaka](#),” even a single light particle (photon) is made of a very large number of *suddhaṭṭhaka*.
- As we discussed there, a *suddhaṭṭhaka* is made by the mind. *Dhammā* can be considered the early stages of a *suddhaṭṭhaka*. They are *kammic* energy packets made by the mind in *javana citta* and arise due to our *gati*. **This is the link between mind and matter!**

14. Therefore, all six senses allow our minds to interact with the material world. We interact with **the material world and the mental world or the *mano* plane.**

- Different types of *rūpa* (*vaṇṇa*, *gandha*, *rasa*, *ojā*, *phoṭṭhabba*) in our physical world (*rūpa loka*) are built with *suddhaṭṭhaka*. *Dhammā* or *kamma bīja* (in the *mano loka*) are basically “energy packets” not yet solidified to the state of a *suddhaṭṭhaka*.
- The *pañcakkhandha* of a living being has “components” from both worlds. The *rūpakkkhandha* are our mental impression of the material world (as mental records); see, “[Pañcakkhandha or Five Aggregates – A Misinterpreted Concept](#).” The other four *khandha* (*vedanā*, *saññā*, *saṅkhāra*, *viññāṇa*) are our mental impressions of the mind world.
- Every living being is associated with its *pañcakkhandha*., because one makes one’s mental impressions. The Buddha said that one could not define a living being with less than five *khandhā*.
- To repeat: **One’s *pañcakkhandha* is not one’s body as is commonly described.** It is not even physical. It is all mental: “[Pañcupādānakkhandha – It is All Mental](#).”

15. The creation of *suddhaṭṭhaka* by the mind in *javana citta*, starts by enhancing one’s *gati*. As we will discuss in a future post on the “*Āsevana Paccaya*,” the more one does activities related to a given *gati*, the *gati* grows. [*Āsevana-paccayā*: repetition, is one of the [24 conditional relations paccayā](#).]

- The growing of a *gati* is the accumulation of a *kamma bīja* (seed), and that is deposited in the *kamma bhava* in the mind plane. These are *dhammā* that is in “*manañca paṭicca dhamme ca uppajjati manoviññāṇam*.”
- And they (*dhammā* or *kamma bīja*) can return to one’s mind when the mind is in a receptive to such a *gati*. Thus it is a self-feeding feedback loop.
- **This is a Crucial point to contemplate on. This is why a drunkard gets the urge to drink, or a gambler to visit a casino. People who don’t have such *gati*, do not get such urges because they do not have the corresponding *dhammā*, repeatedly coming back to impinge on the *mana indriya*.**

- By the way, as discussed in the “[Living Dhamma](#)” section, any such “bad *gati*” can be reduced and eventually eliminated by a two-step method: (i) forcefully stop **activities** — and **conscious thoughts** about them — that contribute to that *gati* when one becomes aware DURING such an act OR a conscious thought, (ii) keep learning Buddha Dhamma to comprehend how that process can actually work (as discussed starting with fundamentals of Buddha Dhamma in the “[Living Dhamma](#)” section); one key aspect here to contemplate on the bad consequences of such actions/thoughts.

16. To emphasize, *dhammā* arise due to *kamma* that we commit. The more *kamma* we do, the corresponding *dhammā* will grow, and become *gati*.

- *Dhammā* means “to bear”; one bears what one likes and what one engages in.
- When one cultivates “dog *gati*,” that is what one bears, and that is what comes back to one’s mind at the *cuti-paṭisandhi* moment and can lead to the next *bhava* and thus birth (*jāti*) as a dog.

17. However, creating a *suddhaṭṭhaka* requires trillions of *citta vīthi* running consecutively. Thus it does not happen significantly in a normal human being. It requires not only *jhānā*, but being able to get into *samāpatti*. Those with *abhiññā* powers can get into *samāpatti* very quickly.

- When in *jhānā*, *cittā* can still switch back to five physical senses in between. When one is in a *jhāna*, one can hear external sounds, for example.
- However, when one is in a *samāpatti*, the *jhānic citta* can flow unceasingly for long periods. Thus, *pañcadvāra citta vīthi* cannot run in between, thus, one is totally unaware of the external environment when in *samāpatti*.

18. Furthermore, when in *samāpatti*, *jhānic citta* flow unceasingly and make each new *javana citta* stronger than the predecessor with the “*Āsevana Paccayā*.” We will discuss this in detail in the future.

- This is how those with *abhiññā* powers (i.e., who can easily get into *samāpatti* and have practiced it well) can even make physical objects: One can start off with a picture of a flower in one’s mind and then by creating more and more *suddhaṭṭhaka* with each new *javana citta*, create an actual flower in a very short time!

19. Finally, *dhamma* in the *nāma loka* are the same as those *viññāṇa* established in the *kamma bhava*. This is a subtle point; see, “[Viññāṇa Aggregate](#).”

- *Dhamma* or *viññāṇa* are called *anidassana*, *appaṭigha rūpa* (*rūpa* that cannot be seen or made contact with) and they are just energies lying below the *suddhaṭṭhaka* stage; see, “[Anidassana Viññāṇa – What It Really Means](#).”
- *Kamma bhava* is the same as the *nāma loka*; *Dhamma* in the *nāma loka* are the same as *viññāṇa* that are established in the *kamma bhava*.; see, “[Our Two Worlds: Material and Immaterial](#).”

13.8.4. 24 conditional relations Paccaya

1

From Dhamma Wiki

Paccaya: 'condition', is something on which something else, the so-called 'conditioned thing', is dependent, and without which the latter cannot be. Many are the ways in which one thing, or one occurrence, may be the condition for some other thing, or occurrence. In the Paṭṭhāna, the last book of the Abhidhamma Piṭaka comprising 6 large vols. in the Siamese edition, these 24 modes of conditionality are enumerated and explained, and then applied to all conceivable mental and physical phenomena and occurrences, and thus their conditioned nature is demonstrated.

The first two volumes of the Paṭṭhāna have been translated into English by the Venerable U Nārada mūla paṭṭhāna Sayadaw of Burma, under the title Conditional Relations Published by the Pāli Text Society, London 1969, 1981.

The 24 modes of conditionality are:

1. Root condition: *hetu paccayā*
2. Object: *ārammana*
3. Predominance: *adhipati*
4. Proximity: *anantara*
5. Contiguity: *samanantara*
6. Co-nascence: *sahajāta*
7. Mutuality: *aññamañña*
8. Support: *nissaya*
9. Decisive Support: *upanissaya*
10. Pre-nascence: *purejāta*
11. Post-nascence: *pacchājāta*
12. Repetition: *āsevana*
13. Kamma: *kamma*
14. Kamma-result: *vipāka*
15. Nutriment: *āhāra*
16. Ability: *indriya*
17. Jhāna: *jhānā*
18. path: *magga*
19. Association: *sampayutta*
20. Dissociation: *vippayutta*
21. Presence: *atthi*
22. Absence: *natthi*
23. Disappearance: *vigata*
24. Non-disappearance: *avigata*

1: Root-condition *hetu-paccayā* is that condition that resembles the root of a tree. Just as a tree rests on its root, and remains alive only as long as its root is not destroyed, similarly all kammically advantageous and disadvantageous mental states are entirely dependent on the simultaneity and presence of their respective roots, i.e., of greed *lobha*, hate *dosa* confusion *moha* or greedlessness *alobha* hatelessness *adosa* unconfusedness *amoha* For the definition of these 6 roots, see: *mūla*.

The roots are a condition by way of root for the mental phenomena associated with a root, and for the material phenomena produced thereby e.g. for bodily expression; Patth.

2: Object-condition *ārammaṇa-paccayā* is called something which, as object, forms the condition for consciousness and mental phenomena. Thus, the physical object of sight consisting in colour and light 'light-wave', is the necessary condition and the sine qua non for the arising of visual-consciousness *cakkhu-viññāṇa* etc.; sound 'sound wave' for ear-consciousness *sotā-viññāṇa* etc.; further, any object arising in the mind is the condition for mind-consciousness *mano-viññāṇa* The mental-object may be anything whatever, material or mental, past, present or future, real or imaginary.

3: Predominance-condition (*adhipati-paccaya*) is the term for 4 things, on the preponderance and predominance of which are dependent the mental phenomena associated with them, namely: concentrated intention (*chanda*), energy (*viriya*), consciousness (*citta*) and investigation (*vīmaṃsā*). In one and the same state of consciousness, however, only one of these 4 phenomena can be predominant at a time. "Whenever such phenomena as consciousness and mental concomitants are arising by giving preponderance to one of these 4 things, then this phenomenon is for the other phenomena a condition by way of predominance" (Patth.). Cf. *iddhi-pāda*.

4-5: Proximity and contiguity or immediacy-condition *anantara* and *samanantara-paccayā* - both being identical - refer to any state of consciousness and mental phenomena associated with them, which are the conditions for the immediately following stage in the process of consciousness. For example, in the visual process, visual-consciousness is for the immediately following mind-element - performing the function of receiving the visible object - a condition by way of contiguity; and so is this mind-element for the next following mind-consciousness element, performing the function of investigating the object, etc. Cf. *viññāna-kicca*.

6: Co-nascent condition *sahajāta-paccayā* i.e. condition by way of simultaneous arising, is a phenomenon that for another one forms, a condition in such a way that, simultaneously with its arising, also the other thing must arise. Thus, for instance, in one and the same moment each of the 4 mental groups feeling, perception, mental constructions and consciousness is for the 3 other groups a condition by way of co-nascent or co-arising; or again each of the 4 physical elements solid, liquid, heat, motion is such a condition for the other 3 elements. Only at the moment of conception in the mother's womb does materiality physical base of mind serve for the 4 mental groups as a condition by way of co-nascent.

7: Condition by way of mutuality *aññamañña-paccayā* All the just mentioned associated and co-nascent mental phenomena, as well as the 4 physical elements, are, of course, at the same time also conditioned by way of mutuality; just like three sticks propped up one by another.; The 4 mental groups are one for another a condition by way of mutuality. So also are the 4 elements, and also mentality and materiality at the moment of conception.

8: Support-condition *nissaya-paccayā* This condition refers either to a pre-nascent see: 10 or co-nascent see: 6 phenomenon which is aiding other phenomena in the manner of a foundation or base, just as the trees have the earth as their foundation, or as the oil-painting rests on the canvas. In this way, the 5 sense-organs and the physical base of the mind are for the corresponding 6 kinds of consciousness a prenascent, i.e. previously arisen, condition by way of support. Further all co-nascent see: 6 phenomena are mutually see: 7 conditioned by each other by way of support.

9: Decisive-support or inducement condition *upanissaya-paccayā* is threefold, namely a by way of object *ārammanūpanissaya-paccayā* b by way of proximity *anantarūpanissaya* c natural decisive support *pakatūpanissaya* These conditions act as strong inducement or cogent reason.

a. Anything past, present or future, material or mental, real or imaginary, may, as object of our thinking, become a decisive support, or strong inducement, to moral, immoral or kammically neutral states of mind. Evil things, by wrong thinking about them, become an inducement to immoral life; by right thinking, an inducement to moral life. But good things may be an inducement not only to similarly good things, but also to bad things, such as self-conceit, vanity, envy, etc.

b. is identical with proximity condition No. 4.

c. Faith, virtue, etc., produced in one's own mind, or the influence of climate, food, etc., on one's body and mind, may act as natural and decisive support-conditions. Faith may be a direct and natural inducement to charity, virtue to mental training, etc.; greed to theft, hate to murder; unsuitable food and climate to ill-health; friends to spiritual progress or deterioration.

10: Pre-nascence-condition purejāta-paccayā refers to something previously arisen, which forms a base for something arising later on. For example, the 5 physical sense-organs and the physical base of mind, having already arisen at the time of birth, form the condition for the consciousness arising later, and for the mental phenomena associated therewith.

11: Post-nascence-condition pacchā-jāta-paccayā refers to consciousness and the phenomena therewith associated, because they are - just as is the feeling of hunger- a necessary condition for the preservation of this already arisen body.

12: Repetition-condition āsevana-paccayā refers to the kammical consciousness, in which each time the preceding impulse moments javana-citta are for all the succeeding ones a condition by way of repetition and frequency, just as in learning by heart, through constant repetition, the later recitation becomes gradually easier and easier.

13: Kamma-condition kamma-paccayā The pre-natal kamma i.e kamma-intentions, kamma-cetanā in a previous birth is the generating condition cause of the 5 sense-organs, the fivefold sense-consciousness, and the other kamma-produced mental and material phenomena in a later birth. - Kammical intention is also a condition by way of kamma for the co-nascent mental phenomena associated therewith, but these phenomena are in no way kamma-results.

14: Kamma-result-condition vipāka-paccayā The kamma-resultant 5 kinds of sense-consciousness are a condition by way of kamma-result for the co-nascent mental and material phenomena.

15: Nutriment-condition āhāra-paccayā For the 4 nutriments, see: [āhāra](#).

16: Ability-condition indriya-paccayā This condition applies to 20 abilities ([indriya](#)), leaving out No. 7 and 8 from the 22 abilities. Of these 20 abilities, the 5 physical sense-organs 1 - 5, in their capacity as abilities, form a condition only for unmaterial phenomena visual-consciousness etc.; physical vitality 6 and all the remaining abilities, for the co-nascent mental and material phenomena.

17: Jhāna-condition jhāna-paccayā is a name for the 7 so-called jhāna-factors, as these form a condition to the co-nascent mental and material phenomena, to wit:

- (1) thought-conception ([vitakka](#)),
- (2) discursive thinking ([vicāra](#)),
- (3) interest ([pīti](#)),
- (4) joy ([sukha](#)),
- (5) sadness ([domanassa](#)),
- (6) indifference ([upekkhā](#)),
- (7) concentration ([samādhi](#)). (For definition s. Pāli terms)

1, 2, 3, 4, 7 are found in 4 classes of greedy consciousness see: Tab. I. 22-25; 1, 2, 5, 7 in hateful consciousness ib. 30, 31; 1, 2, 6, 7 in the classes of confused consciousness ib. 32, 33.

This condition does not only apply to jhāna alone, but also to the general intensifying 'absorbing' impact of these 7 factors.

18 path-condition magga-paccayā refers to the 12 path-factors, as these are for the kammically advantageous and disadvantageous mental phenomena associated with them, a way of escape from this or that mental constitution, namely: 1 knowledge paññā = sammādiṭṭhi right understanding, 2 right or wrong thought-conception vitakka 3 right speech sammā-vācā 4 right bodily action sammā-kammanta, 5 right livelihood sammā-ājīva 6 right or wrong energy viriya 7 right or wrong awareness or mindfulness sati 8 right or wrong concentration samādhi 9 wrong views micchādiṭṭhi 10 wrong speech micchā-vācā 11 wrong bodily action micchā-kammanta 12 wrong livelihood micchā-ājīva Cf. magga

19: Association-condition *sampayutta-paccayā* refers to the co-nascent see: 6 and mutually see: 7 conditioned 4 mental groups *khandha* as they aid each other by their being associated, by having a common physical base, a common object, and by their arising and disappearing simultaneously; Patth. Com..

20: Dissociation-condition *vippayutta-paccayā* refers to such phenomena as aid other phenomena by not having the same physical base eye, etc. and objects. Thus material phenomena are for mental phenomena, and conversely, a condition by way of dissociation, whether co-nascent or not.

21: Presence-condition *atthi-paccayā* refers to a phenomenon - being pre-nascent or co-nascent - which through its presence is a condition for other phenomena. This condition applies to the conditions Nos. 6, 7, 8, 10, 11.

22: Absence-condition *natthi-paccayā* refers to consciousness, etc., which has just passed, and which thus forms the necessary condition for the immediately following stage of consciousness by giving it an opportunity to arise. Cf. No. 4.

23: Disappearance-condition *vigata-paccayā* is identical with No. 22.

24: Non-disappearance-condition *avigata-paccayā* is identical with No. 21.

These 24 conditions should be known thoroughly for a detailed understanding of that famous formula of the dependent origination (*paticcasamuppāda*).

Mahā Thera Nyanatiloka. *Manual of Buddhist Terms and Doctrines*, Buddhist Publication Society, first edition 1952.

See The Significance of Dependent Origination, by Nyanatiloka (WHEEL 140).

13.8.5 Pabhassara Citta, Radiant Mind, and Bhavanga

April 13, 2017; revised January 19, 2018; August 20, 2018; January 7, 2019; February 14, 2021

It is a good idea first to read the posts, "[Amazingly Fast Time Evolution of a Thought \(Citta\)](#)" and "[Viññāna – What It Really Means](#)."

A "Thought" Is the Result of Billions of *Citta*

1. Billions of *citta* flow in a second, and what we experience is the cumulative effect of billions of *citta*, which we call a "thought." Let us start at the base state of a *citta* (loosely translated as a thought, but it is really not). Every *citta* has 7 universal *cetasika* (mental factors). Universal *cetasika* are discussed in, "[What is in a Thought? Why Gati are so Important?](#)."

- Those 7 universal *cetasika* are: *Phassa* (contact), *saññā* (perception), *vedanā* (feeling), *cetanā* (intention), *ekaggata* (one-pointedness), *jivitindriya* (life faculty), and *manasikāra* (memory). This is the "baseline" state of a *citta*, which lasts only a billionth of a second.
- And during that brief time, many other *cetasika* (good or bad) can be incorporated into a *citta*. But let us consider the more straightforward case where no other *cetasika* are included.
- Even such a simple *citta* is still contaminated or defiled at the end of that brief time. This contamination is manifested in *vedanā* and *saññā cetasika*.

Each *Citta* Goes Through Nine Stages!

2. Each INDIVIDUAL *citta* — during its existence for a billionth of a second — undergoes change in 9 stages! Such a fast process cannot be seen by any human other than a Buddha; see, "[Citta, Mano, Viññāna – Stages of a Thought](#)."

- At the end of the 9 stages, it has evolved and has become affected by the whole of the *viññāṇakkhandha* (including past *viññāṇa*).
- The contamination of a *citta* is manifested in *saññā* and *vedanā*; **a contaminated *citta* is called *viññāṇa*.**
- *Vedanā* at the base level is “discerning that an event took place” (“*veema*” + “*danaveema*” or “සිංදනවීම” in Sinhala). Actual “feelings” about the event will be incorporated as the *citta* evolves in 9 stages, as we will discuss below.

Even the First *Citta* Is Contaminated

3. The other critical universal *cetasika* that evolves in 9 stages is *saññā*. Even though it has become standard to write as “*saññā*,” that is not how it is pronounced “*sangngā*”:

[WebLink: Play the word “saññā”](#)

- Some do indicate the correct pronunciation by writing as *saññā*. Even though it does not really matter how one writes it (“*sanna*” or *saññā* or “*sangnga*”), it is critically important to understand what is meant by it; see, “[What is Saññā \(Perception\)?](#).”
- *Saññā* provides one’s perception about a given event that led to the arising of the *citta*. For example, if we see an object, the identification of that object proceeds via those 9 stages (and *vedanā* evolves accordingly).
- So, let us briefly go through the 9 stages of the evolution of a *citta* using *saññā* as the basis.

Contamination of a *Citta* Is Due to *Anusaya*

4. Each *citta* gets contaminated in those 9 stages due to *anusaya* that comes to the surface as *āsava* (or *āsaya*), which are also related to one’s *gathi*. There are many posts at the site with details on those entities.

- Those nine stages of contamination during the lifetime of the *citta* itself (in a billionth of a second) are *citta*, *mano*, *mānasā*, *hadaya*, *paṇḍara*, *mano manāyatana*, *mana indriya* (or *manindriya*), *viññāṇa*, *viññāṇakkhandho*. [*Yam cittam mano mānasam hadayam paṇḍaram mano manāyatanaṃ manindriyaṃ viññāṇaṃ viññāṇakkhandho...*]
- This rapid contamination of a *citta* is explained in the “[WebLink: suttacentral: Patīccasamuppāda Vibhaṅga](#),” in Section 2.5.1. Akusalacitta : “*Tattha katamaṃ saṅkhāra paccayā viññāṇaṃ? Yam cittam mano mānasam hadayam paṇḍaram mano manāyatanaṃ manindriyaṃ viññāṇaṃ viññāṇakkhandho tajjāmanoviññāṇadhātu—idaṃ vuccati “saṅkhārapaccayā viññāṇaṃ”*.”
- Those 9 stages are also listed in the original commentary, section 1.3.5.3. Tatiyacatukkaniddesa in [WebLink: suttacentral: 1.3. Ānāpānassatikathā](#) or Patisambhidamaggapakarana (or Part I, p. 360 of Buddha Jayanati Tipiṭaka): “*..yam cittam mano mānasam hadayam paṇḍaram manomanāyatanaṃ manindriyaṃ vinnanaṃ vinnakkhandho...*” [*Yam cittam mano mānasam hadayam paṇḍaram mano manāyatanaṃ manindriyaṃ viññāṇaṃ viññāṇakkhandho...*] I trust only three commentaries and all three are in the *Tipiṭaka*: *Patisambhidamagga*, *Petakoṇḍesa*, and *Nettipakaraṇa*.
- All other commentaries that are in existence today were written much later and are not reliable; see, “[Buddhaghosa and Visuddhimagga – Historical Background](#).”
- What we actually experience is *vinnaṇakkhandha*. Even after going through the 9 stages it is still called a *citta* for convenience; see, “[Citta, Mano, Viññāṇa – Stages of a Thought](#)” and “[Amazingly Fast Time Evolution of a Thought \(Citta\)](#).”

Simple Example Explaining the Nine Stages of a *Citta*

5. Let us consider the example of seeing one's mother. At the initial *citta* stage, the only perception is that a person is there. In the next step of “*mano*” (which stands for “calibrating with respect to other persons; “*maneema*” in Sinhala), it is realized that the person is woman.

- In the third stage of “*mānasam*,” “*saṇ*” comes to the picture and extra information (which is personal) is incorporated; see, “[What is “Saṇ”? Meaning of Sansāra \(or Samsāra\).](#)” Now, one identifies the person as one's mother.
- By the way, we cannot live in this world without at least reaching the “*mānasam*” stage of a *citta*. Otherwise, we will not be able to distinguish a given person in a crowd.
- Actual contamination of the *citta* starts at the next stage of “*hadayaṃ*,” which means identifying whether that person is “close to one's heart” and then getting attracted or repulsed. In our example, one recognizes the person as “one's mother” and of course corresponding *vedanā* of an attachment arises as well.

An Arahant's Citta Does Not Contaminate Beyond the ‘Mānasam’ Stage

6. An Arahant's *citta* does not evolve beyond the ‘*mānasam*’ stage. So, the Buddha was able to identify different people, but he did not form any attachment/dislike based on that identification.

- This is what is stated in the *Karaniyamatta Sutta*: “..*mānasam bhāvaye aparimāṇam*...” One needs to cultivate “*mānasam*” as much as possible (“*aparimāṇa*” or “*appamāṇa*” or without limit), but not let the *citta* contaminate beyond that.
- That can be done only via reducing and finally removing one's bad *gathi*, *āsava*, and *anusaya*, as we discuss below.

Getting Attached at the ‘Hadayaṃ’ Stage

7. The next step after “*hadayaṃ*” is “*pandaram*,” which means to “add more power,” i.e., one's mind will look back at past events (yes, within a billionth of a second), recall how loving she was, and “attach more”. It is done automatically by the *manasikāra cetasika*.

- So, the *citta* gets more and more contaminated as it advances to the *viññāṇa* stage. Thus *viññāṇa* is actually a *citta* that is very much contaminated due to one's *anusaya*, *āsava*, and *gati*.
- Finally, it becomes part of the *viññāṇakkhandha*, which includes 11 types of *viññāṇa*: past, present, future, near, far, fine (*sukuma*), coarse (*olārika*), likes (*paneeta*), dislikes (*appaneeta*), internal (*ajjatta*), and external (*bahidda*).
- A *viññāṇakkhandha* has incorporated not only one's *anusaya*, *āsava*, and *gathi*, but also one's memories and future hopes, etc.

8. Now we can address the issue of a “*pabhassara citta*.” First, what is meant by “*pabhassara*”?

- The word comes from three sounds at the root: “*pa*” means again and again, “*bha*” is related to “*bhava*”; and “*sara*” or “*chara*” means to “*sarisareema*” in Sinhala or “to participate”. Thus a “***pabhasara*** *citta*” with only one “s” in the word (NOT *pabhassara*) is a contaminated *citta* that will lead to *sansāric* journey or the rebirth process.
- The opposite of “***pabha sara***” is “*pabha assara*,” where “*assara*” means “not take part in”. It rhymes as “***pabhassara***.”
- This is why I say that Pāli is phonetic language. Meanings come based on sounds. I have given many examples throughout the website.

Pabhassara Citta Is There Only at the Beginning of Nine Stages

9. Therefore, a “**pabhassara citta**” is that base state, or the **pure state** of a *citta*, BEFORE it goes through the 9 stages of contamination. It has only the 7 universal *cetasika*.

- Each and every *citta* of a given person starts as a *pabhassara citta* but gets contaminated to varying degrees depending on one’s personality or one’s advancement along the Path.
- Even an *Arahant*’s *citta* is not a *pabhassara citta*; it will contaminate to the level of “*mānasam*,” as we discussed above. However, *Arahant phala citta*, which lasts for only one *citta*, is a *pabhassara citta*.
- When an *Arahant* is in *Arahant phala samāpatti*, he/she knows that one is alive, but has no awareness of outside events. This is called *animitta*, *appanihita*, *suññata samādhi*. That is different from the *nirodha samāpatti*, where the flow of *citta* stops.
- In Buddha Dhamma, defilements are associated with “dark”, and pure states are associated with “bright” or “radiant”. So, we could call a *pabhassara citta* a “radiant *citta*,” and **a mind that generates AND maintains *citta* at that state a “radiant mind”**.
- The only time such radiant or pure *citta* flow occurs, is when an *Arahant* is in *Arahant phala samāpatti*, with the *Arahant phala citta* flowing continuously.

***Pabhassara Sutta* (AN 1.51)**

10. This process of contamination of a *citta* is what stated in the “[WebLink: suttacentral: Pabhassara Sutta \(AN 1.51\)](#)”: “*Pabhassaramidaṃ, bhikkhave, cittaṃ. Tañca kho āgantukehi upakkilesehi upakkiliṭṭhaṃ. Taṃ assutavā puthujjano yathābhūtaṃ nappajānāti. Tasmā ‘assutavato puthujjanassa citta bhāvanā natthi’ ti vadāmi ti.*”

- First, “*Pabhassaramidaṃ*” is “*Pabhassara idaṃ*.” As I keep saying, words are sometimes combined or even a bit changed to rhyme in *suttā*. So, the first sentence says, “*Bhikkus, citta* (the first stage) is *pabhassara* or does not contribute to rebirth process”.
- The next sentence says how it is defiled: “*āgantuka*” (which is also a Sinhala word, “අගන්තුක”) means “introduced.” What is introduced is “*upakilesa*” or defilements (that are in one’s *gathi*, *anusaya*, *āsava*). That leads to “*upakilitta*” or contamination. Again. “*kilit*” in Pāli and Sinhala means “dirty”.
- The next sentence says, “those *puthujjano* who do not understand this, cannot comprehend the reality (*yathābhūta*)”. Here *puthujjana* means an average human who has not been exposed to Buddha Dhamma; i.e., one who does not comprehend *Tilakkhaṇa*. Thus the last sentence says, “therefore, I do not recommend *citta bhāvanā* to those who do not comprehend *Tilakkhaṇa*.”

Anidassana Viññāṇa* Is Not a *Pabhassara Citta

11. Another famous quote from the [WebLink: suttacentral: Kevatta Sutta \(DN 11\)](#) in the *Digha Nikāya* (DN 11), says, “*Viññāṇaṃ anidassanaṃ anantaṃ sabbato pabhaṃ...*” This could be written as “*Viññāṇaṃ anidassanaṃ, anantaṃ, sabbato pabhaṃ...*” in order to break into three components.

- Here, “*anidassana*” means “cannot be seen”. *Viññāṇa* is more than a *nāma dhammā* and has “*kammic* energy”. But it is below the “visible *rūpa*”; see, “[Kamma Viññāṇa – Link Between Mind and Matter](#).”
- And, “*ananta*” is infinite; *viññāṇa dhātu* is infinite.
- “*sabbato*” means “in every way/for all”.
- As we discussed above in #8, “*pabbha*” means “repeated *bhava*” (*pabhaṃ* comes for that).
- Therefore, the above verse means, “***viññāṇa* is unseen, infinite, and leads to the rebirth process for all.”**
- To emphasize: ***viññāṇa* is a defiled *citta*. We all experience *viññāṇa*, not pure *citta*. Even more accurately, we experience *viññāṇakkhandha* (*viññāṇa* aggregate). However, we loosely call “a thought” a *citta*.**

- One stops the rebirth process by removing one's bad *gati*, *āsava*, and *anusaya* and not letting *citta* contaminate beyond the “*mānasam*” stage.

More details at this post: “[Anidassana Viññāna – What It Really Means.](#)”

Bhavaṅga Citta Is Not a Pabhassara Citta

12. Some commentaries say that *bhavaṅga citta* are *pabhassara citta*. **That is absolutely incorrect.** All living beings have *bhavaṅga citta* that depend on one's *bhava*; see “[Bhava and Bhavaṅga – Simply Explained!](#).”

- *Bhavaṅga* comes from “*bhava*” + “*anga*,” where “*anga*” is “a part”. So, *bhavaṅga* means “associated with a given *bhava*.” *Bhavaṅga* is obviously different for different *bhava*.
- An animal also gets into the *bhavaṅga* state. **Does that mean an animal has a “radiant mind” when it is in the *bhavaṅga* state?**
- Furthermore, sometimes “*anidassana viññāṇa*” is also incorrectly explained as the base level of *viññāṇa*. Per #11 above, it is clear that *anidassana viññāṇa* just explains that *viññāṇa* cannot be “seen.”

13. In fact, **it is not correct to say *bhavaṅga citta***. *Bhavaṅga* is a “state of mind”, no *citta vīthi* run during *bhavaṅga*.

- For example, a living being in the *asañña* realm does not experience any thoughts. There are absolutely no *citta vīthi* running during the whole time there. However, the body is maintained by *bhavaṅga* that corresponds to that *bhava*.

No Pabhassara Citta Below Arahant Stage

14. So, the point here is that as long as one has bad *gati* (or *anusaya*, *āsava*, etc., which are all inter-related and can be just called *avijjā*), one's thoughts **will be contaminated as they arise**.

- Therefore, we cannot control our thoughts as they arise: **a *citta* is contaminated to the *viññāṇa* stage in a billionth of a second, which is unimaginably fast.** This is why the Buddha said a *citta* is the fastest entity in the world (we loosely call “a thought” a *citta*, even though it is really *viññāṇakkhandha* that we experience).
- All we can do is to REDUCE *avijjā* (and thus all those related entities of *gathi*, *āsava*, *anusaya*) by learning *Dhamma* and then practicing *Ānāpāna* (not breath meditation) and *Satipaṭṭhāna* meditation.
- As one proceeds in the Path, one's bad *gati* (and *āsava* and *anusaya*) will start decreasing, one's *citta* will tend to be more “cleaner and brighter.”
- Once one gets to a certain level, one can start contemplating on those key concepts like *anicca*, *dukkha*, and *anatta*, i.e., *vipassanā* meditation, and attain *magga phala*.

Contamination of a Citta Depends on the Ārammaṇa and Gati

15. Not all *citta* get contaminated at the same level. A *citta* arises when one of our six sense faculties makes a sense contact, and the level of contamination of the *citta* depends critically on what that sensory input is.

- Let us take some examples. When we taste delicious food or see an attractive object, greedy thoughts may arise. But we know that we all don't have the same cravings for a given item. Some foods that some people crave can be repulsive to some others. In another example, a given person may be liked by some but disliked by others (think about a famous politician).

- Furthermore, we don't generate defiled thoughts in many cases. Billions of *citta* flow through our minds as we look at scenery passing by while riding in a car; they are mostly neutral, but still are contaminated to a certain level.
- But the level of contamination will be stronger when one sees an eye-catching object.
- Details at, "[Ārammaṇa Plays a Critical Role in a Sensory Event](#)."

A Newborn Baby Does Not Have a *Pabhassara Citta*

16. I have seen some people say *citta* that arise in a baby are *pabhassara citta*. *Anusaya* ALWAYS remains with a lifestream regardless of whether it is a baby, animal, *Brahma* until that lifestream attains the *Arahant* stage.

- A baby's brain has not developed so it cannot experience the world as we do, and it also cannot express itself. But a baby's *citta* are also contaminated due to *anusaya* being there.
- Only when one attains *magga phala* that a part of one's *anusaya* (and *āsava* and *saṃyojana*) is removed permanently; see, "[Conditions for the Four Stages of Nibbāna](#)."

How to Attain a *Pabhassara Citta*

17. As one starts at the *Sotāpanna* stage of *Nibbāna*, and advance through *Sakadāgāmī*, *Anāgāmī* stages to the *Arahant* stage, one's *avijjā* (and thus bad *gathi*, *anusaya*, *āsava*, etc.) decrease permanently.

- Thus a *Sotāpanna*'s thoughts will not be defiled beyond a certain level of contamination. Indeed, a *Sotāpanna* will not generate strong *akusala citta* that are capable of leading to rebirth in the *apāyā*.
- By the time one gets to the *Anāgāmī* stage, one has removed all *kāmāsava* (*kāmā āsava*), and thus will not be tempted by any sensual object in the *kāmā loka*. Therefore he/she will not be reborn anywhere in the *kāmā loka* (four *apāyā*, human realm, and the six *deva* realms).
- When one gets to the *Arahant* stage, one has removed all *avijjā* (and all bad *gathi*, *anusaya*, *āsava*, etc.): One has attained *Nibbāna*, and thus one will not be reborn anywhere in the 31 realms at death.
- All the above have been discussed in detail in many posts at the site. One can use the site map "[Pure Dhamma – Sitemap](#)" or use the "Search" box on top right to look for posts for given keyword(s).

14.1 Historical Background – Introduction

One of the earliest posts: Revised May 27, 2017

1. Today, we have three main “schools” of “Buddhism” that include the Theravāda Buddhism in Sri Lanka, Burma, Thailand, and few other South Asian countries, Mahāyāna Buddhism in the form Zen in Japan, China, and several other Asian countries, and Vajryāna Buddhism in Tibet.

- All these are being practiced in other countries in varying degrees. How the original teachings of the Buddha got branched out over 2500 years is discussed in, “[Historical Timeline of Edward Conze](#).”

2. The vast literature in Theravāda Buddhism, which is contained in the Tipiṭaka (three baskets of Sutta, Vinaya, and Abhidhamma) are mostly self-consistent.

- Considering the vastness of the material in these documents, the consistency is amazing, and gives one confidence that any “contamination” would be small indeed.

3. However, even the *Theravāda* literature has been contaminated with incorrect interpretations of the *Tipiṭaka*.

- The root causes of misinterpretations of key terms are discussed at several posts below in this section, but specifically two major historical events can be pointed out: “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#)” and “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”
- These inconsistencies were first pointed out by my teacher *Thero* who recently passed away, and my goal with this website is to point out those errors and illustrate that those correct interpretations provide a fully-consistent picture: “[Parinibbāna of Waharaka Thero](#).”

4. It is hard for me to fathom how a normal human being, regardless of how intelligent he is, could teach the doctrine in such different ways over forty five years, yet be so consistent in multiple ways (the discourses range from simple one-to-one question answer sessions with individuals to lengthy discourses delivered to audiences of thousands of people, not to mention the complex Abhidhamma material).

- Even with the help of a computer, it is hard for me to keep track of the intricacy of Abhidhamma. The complex workings of the mind has been analyzed in multiple ways, and they are all consistent within the Abhidhamma and also with the Suttā.

5. Teachings of the Buddha, as given in the Theravāda Tipiṭaka, are confirmed and solidified with each new scientific discovery (in contrast, the mythical aspects introduced in various forms of Mahāyāna Buddhism are facing problems in light of scientific progress).

Buddha Dhamma is like a diamond covered in the dirt of ignorance. The more we find about the world through scientific methods (thus removing more dirt from the diamond), the more of the diamond’s luster become apparent. Not too far into the future, Buddha Dhamma will shine brightly and will greatly help the humanity all over the world.

6. It is ironic in a way how the “materialistic science” is helping to clarify and confirm the teachings of the “mind-based” Buddha Dhamma. Yet the humanity is still only enamored with the truly amazing materialistic advances based on scientific discoveries, and is for most part unaware of its primitive stage compared to ultimate knowledge contained in Buddha Dhamma.

- The real breakthrough may come when science will be forced to embrace the mind as yet another fundamental property of nature.
- The discovery of quantum mechanics has clearly laid the foundation for this next breakthrough. It has been more than hundred years since the advent of quantum mechanics, but it is only within the past two to three decades that real progress has been made in this direction. I discuss these developments in detail in the “[Dhamma and Science](#)” section.

Next, “[Methods of Delivery of Dhamma by the Buddha](#)”,

14.2 Counterfeit Buddhism – Current Mainstream Buddhism

June 30, 2023; Revised July 4, 2023 (#4)

Counterfeit Buddhism (mainstream Buddhism today) appears like Buddha's teachings but has deviated much from the original teachings. The Buddha foresaw that, as we discuss.

Counterfeit Gold – Buddha's Analogy

1. The Buddha stated that his teachings tend to “go underground” quickly because there is a tendency to replace more profound concepts with simple/mundane interpretations that most people can easily understand. Unfortunately, as discussed below, that prediction came true only 500 years after the Buddha.

- The tendency to deviate from the profound teachings became clear even during the life of the Buddha. During the first 20 years, the Buddha did not declare any *Vinaya* (disciplinary) rules for the *bhikkhus*. Even after the Buddha started enacting *Vinaya* rules (they grew to 227 for the *bhikkhus* and 311 for *bhikkhunis* before the *Parinibbāna* of the Buddha), many started behaving inappropriately and also misinterpreting Buddha's teachings.
- Thus, after the initial “surge” of *Arahants*, the progress slowed even during the latter years of the Buddha.
- One time, Ven. Mahākassapa asked the Buddha why fewer *Arahants* were produced even with established *Vinaya* rules.

2. That question and Buddha's answer are in the “[WebLink: suttacentral: Saddhammappatirūpaka Sutta \(SN 16.13\)](#).” Here, “*saddhamma*” (“*sath*” + “*dhamma*”) means the “good/true teachings,” and “*patirūpa*” means “imitation” (something that looks like the original but is not.)

- Ven. Mahākassapa asked the Buddha, “There used to be fewer training rules but more *Arahants* (*bhikkhū aññāya*). But now there are more training rules and fewer *Arahants*. Why is that?”

The Buddha explained as follows (only the meaning): “Those who could easily grasp my teachings attained *Arahanthood* in the early days. It is more difficult for those remaining to comprehend this profound Dhamma. Even with more *Vinaya* rules (*sikkhāpadāni*), it is difficult for them to tame their minds and grasp the deep teachings.”

Then the Buddha predicted that it would get worse: “The true teaching will go underground when a counterfeit of the true teaching appears. It's like genuine gold going underground when counterfeit gold appears because most cannot distinguish between pure gold and counterfeit gold. **Only a few will be able to make the distinction between my Dhamma and the counterfeit Dhamma.**”

Buddha Did Not Provide a Time Limit

3. There is a widespread belief that Buddha Gotama's Buddha *Sāsana* will last 5000 years. However, I have not seen it in the *Tipiṭaka*. It could be in a later Commentary, but I have not seen such a commentary either.

- In the above, the Buddha stated that his teachings would go “underground” gradually as “fake teachings (that look like the true teachings)” take hold.
- That happened around 2000 years ago (or roughly 500 years after the *Parinibbāna* of the Buddha, with the emergence of “*Mahāyāna* Buddhism” in India.
- Thus, the Buddha foresaw the upcoming decline, but he stated that as long as there are at least *Sotāpannas* among the humans, his teachings will survive “in the underground” where those who can understand and appreciate its value.

The Emergence of *Mahāyāna* With Counterfeit Dhamma

4. Around 100 BCE, some in India started translating Pāli *suttās* into Sanskrit. Some of those Sanskrit translations have survived in other countries, even though no literature related to Buddhism remained in India after about 1000 AD. The following is one of the *suttās* translated into Sanskrit: “[WebLink: suttacentral: The Questions of Nālaka](#).” There seems to be only a handful of such *suttās* translated into Sanskrit that have survived, and they are at the Sutta Central: see “[WebLink: suttacentral: Sanskrit Canonical Discourses](#).”

- Starting around 100 BCE, a group of *Mahāyāna* philosophers started compiling Sanskrit *śūtrās*; **these were not even translations of the Pāli suttas but were “new interpretations” of Buddha’s teachings**. They asserted that old interpretations had become obsolete and needed to be “upgraded” with new concepts.
 - The only consolation is that it is easy to distinguish the *Mahāyāna* versions because they are *śūtrās* (Sanskrit term for *suttās*). If you see a *śūtrā*, that is one compiled by a philosopher like Nagarjuna. Of course, the exception is the handful of surviving direct translations; but those can be identified as translations. Furthermore, they clearly show the direct translation of *anicca, dukkha, and anatta* with the Sanskrit words *anitya, duḥkha, and anātma*. I will discuss that in the next post.
 - All original *suttās* remain intact in the Pāli *Tipiṭaka*. Yet, most current translations of those Pāli *suttās* are incorrect because *Theravāda* adopted SOME of the *Mahāyāna* distortions (including the replacement of *anicca, dukkha, and anatta* with the Sanskrit words *anitya, duḥkha, anātma*) during the peak of *Mahāyāna* Buddhism in India.
5. In the analogy provided above, when counterfeit gold appears, it becomes widely used because it is cheaper, and most people cannot distinguish the difference.

- In the same way, when the deeper meanings of Buddha’s fundamental concepts are replaced by easy-to-understand (but incorrect), superficial, and mundane explanations, most people latch on to such incorrect explanations. That is why *Theravādins* readily adopted some of the “proposed improvements” put forth by *Mahāyāna* philosophers.
- For example, *anicca* and *anatta* are complex Pāli words that CANNOT be translated into any language as single words. Yet, they were first translated to Sanskrit as *anitya* (pronounced “*anithya*”) and *anātma* (pronounced “*anāthma*”) only 500 years after the passing away of the Buddha.
- **Just like now, most people quickly adopted those simpler explanations. They were praised as “new interpretations for the obsolete teachings,”** as the historian Edward Conze pointed out; see “[Historical Timeline of Edward Conze](#).”

The Buddha Predicted the Timeline

6. The Buddha also foresaw the timeline of the “emergence of counterfeit Dhamma.” In the “[WebLink: suttacentral: Gotamī Sutta \(AN 8.51\)](#),” **he stated that his teachings, in their “full glory,” would last only 500 years**. That matches the emergence of *Mahāyāna* roughly 500 years after the *Parinibbāna* of the Buddha.

- The Buddha made that prediction after the establishment of the *bhikkhuni* order. The Buddha first declined to establish the *bhikkhuni* order. After establishing the *bhikkhuni* order, the Buddha told Ven. Ānanda that instead of lasting for 1000 years after his passing away, it would last only 500 years.
- As the Buddha predicted, the “peak period” lasted only about 500 years after the *Parinibbāna* of the Buddha to roughly 100 AD. The emergence of *Mahāyāna* Buddhism started gradually around 100 BC and peaked around 400-500 AD; see the “*Mahāyāna* Buddhism” section in the Wikipedia article “[WebLink: wikipedia.org: History of Buddhism](#).”

- However, the Buddha also emphasized that his teachings (among humans) will not disappear as long as there are at least *Sotāpannas* among humans who can keep passing down the teachings to the next generation.

Historical Timeline by Edward Conze

7. The historical timeline is also discussed in detail by Edward Conze in his book, “A Short History of Buddhism” (1980; last edition 2008). According to Conze, the history of Buddhism can be conveniently divided into four periods:

1. The old Buddhism largely coincided with what later came to be known as *Theravāda*.
2. Rise of *Mahāyāna*,
3. Rise of the *Tantra* (*Vajrayāna*) and *Ch’an* (*Zen*),
4. No further divisions.

8. During the heyday of *Mahāyāna*, it became highly influential for about 500 years. As Edward Conze put it, **“The creation of this literature is one of the most significant outbursts of creative energy known to human history, and it was sustained for about four to five centuries.”**

- I highly recommend reading the post “[Historical Timeline of Edward Conze](#),” where I discussed Conze’s book.
- Even though no trace of Buddhism was left in India by the time Europeans took control in the 1800s, the damage had been done, and the consequences have lasted to the present time.

Mahāyāna Influence Led to the Distortion of *Theravāda* Buddhism

9. I have discussed the fact that even the mainstream *Theravāda* Buddhist texts today — which are the closest to the teachings of the Buddha compared to *Mahāyāna*, *Vajrayana*, Tibetan, and other versions — interpret many of the fundamental teachings of the Buddha incorrectly. See “[Incorrect Theravada Interpretations – Historical Timeline](#).”

- When the Europeans discovered Buddhism in the 1800s, they found that contaminated version. With the newly discovered printing press, that version got firmly established worldwide. Details in “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”
- However, the Pāli *Tipiṭaka* has been faithfully preserved by a generation of a small number of *bhikkhus*. As discussed in the post “[Preservation of the Dhamma](#),” they kept re-writing the whole *Tipiṭaka* on ola leaves every 100-200 years (lifetime of manuscripts made of ola leaves.) **That also served the unintended benefit of taking into account the changes in the Sinhalese alphabet over 2000 years.**
- How could Buddha’s teachings get distorted so quickly? The Buddha addressed that in his first discourse: **The worldview he discovered during the night of his Enlightenment was radically different from any known worldview.**

The inability of Many to Comprehend the True Teachings

10. **The Buddha explained the root problem of the inability of most people to comprehend the profound — and unimaginably different — worldview he realized during the night he attained the Buddhahood.**

- *Dhammacakkappavattana Sutta* was the first *sutta* delivered by the Buddha just after attaining Enlightenment.

- The following verse appears in the “[WebLink: suttacentral: Dhammacakkappavattana Sutta \(SN 56.11\)](#)” twelve times: “*.pubbe ananussutesu dhammesu.*” It means “**this Dhamma that I just discovered has not been known to the world previously.**”
- It is a teaching that goes against all mundane views/perceptions about our world. Because of that, there is a high probability that many deep concepts would be easily replaced (and accepted) by people who cannot grasp those more profound meanings. **This is the root cause for the vulnerability of Buddha's teachings to be “easily distorted.” People tend to drift toward “simple and mundane concepts.”** The obvious example is the currently deeply-embedded view that *Ānāpānasati* is “breath meditation.”

11. The Buddha has repeatedly emphasized the need to pay serious attention to comprehending his Dhamma.

- As we know, Ven. Ānanda had an excellent memory (he had memorized the whole *Sutta Piṭaka* and recited it at the First Buddhist Council.)
- Yet, when he told the Buddha that it was easy for him to understand *Paṭicca Samuppāda*, the Buddha admonished him not to take it lightly: “[WebLink: suttacentral: Mahānidāna Sutta \(DN 15\).](#)”

12. **The difference between Buddha's worldview and any other worldview ever proposed by a human can be stated simply as follows:** “Humans perceive that happiness is in the material world; they are delighted when able to acquire “valuable worldly entities,” whether in desirable partners or expensive things like gold, cars, houses, etc. **However, the Buddha's new found worldview says pursuing those worldly things will — without any doubt — lead to suffering. That suffering manifests not only in future lives but also in this life. The relief from suffering can be experienced in this life itself by comprehending Buddha's true teachings.**”

- One truly comprehends the “*anicca* nature” upon seeing the truth of that last part. **Then one would realize how silly it is to translate “*anicca*” as “impermanence.”**
- Thus, “*Nibbānic Bliss*” can be experienced in this life! The way to get there is to become a *Sotāpanna* and diligently practice *Satipaṭṭhāna/Ānāpānasati* (practically the same; *Satipaṭṭhāna* is a longer systematic version.) . I will write more in the coming months.
- Understanding “[Paticca Samuppāda During a Lifetime](#)” is critically important; also see “[Paticca Samuppāda in Plain English](#).”

Unimaginable Harm Inflicted by *Mahāyāna* Buddhism

13. The Buddha had prohibited even translating the *Tiṭṭaka* to Sanskrit; see #13 of “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).” However, *Theravāda bhikkhus* started learning Sanskrit during the peak of *Mahāyāna* in India.

- During that time, *Mahāyāna* (based on Sanskrit *sutrās*) became so influential even in Sri Lanka that the *bhikkhus* at the *Theravāda* Center of *Mahāvihāra* in Anuradhapura had to take some controversial steps to stay relevant. One time, the *Mahāvihāra* was burnt to the ground by a King under the influence of the *Abhayagiri Vihāra*, which adopted *Mahāyāna* teachings; it was rebuilt later.
- Those details are discussed in the Introduction to “[WebLink: PDF Download: The Path of Purification](#)” by *Bhikkhu Ñāṇamoli* (BPS Pariyatti, 1999.) The pdf version of the complete book is available in the link provided; **the Introduction section extends from p. 36 to p. 111** and is a MUST READ for those who like to “dig in.” I have separated the Introduction to a separate pdf that you can view/download: “[WebLink: PDF Download: The-Path-of-Purification-Introduction](#).”
- In the following, I present a few extractions from that Introduction section by *Bhikkhu Ñāṇamoli*.

A Few Highlights from the Introduction section by *Bhikkhu Ñāṇamoli*

14. **Starting at the bottom of p. 36 through the top of p. 38:** “Before dealing with those facts, however, and in order that they may appear oriented, it is worthwhile first to digress a little by noting how Pāli literature falls naturally into three main historical periods.

The early or classical period, which may be called the First Period, begins with the Tipiṭaka itself in the 6th century BCE and ends with the Milindapañhā about five centuries later. These works, composed in India, were brought to Sri Lanka, where they were maintained in Pāli but written in Sinhalese. By the first century CE, Sanskrit (independent of the rise of Mahāyāna) or a vernacular had probably displaced Pāli as the medium of study in all Buddhist “schools” on the Indian mainland. Literary activity in Sri Lanka declined and, it seems, fell into virtual abeyance between CE 150 and 350, as will appear below.

The first Pāli renaissance was underway in Sri Lanka and South India by about 400 CE and was made viable by Bhadantācariya Buddhaghosa. This can be called the Middle Period. Many of its principal figures were Indian. It developed in several centers in the South Indian mainland and spread to Burma, and it can be said to have lasted till about the 12th century. Meanwhile, the renewed literary activity again declined in Sri Lanka till it was eclipsed by the disastrous invasion of **Magha** in the 11th century. [In 1214 **Magha** of the Kalingas invaded Sri Lanka with the help of thousands of such mercenaries, and he took control of the whole island. See “[WebLink: britannica.com: The fall of Polonnaruwa](http://www.britannica.com/The-fall-of-Polonnaruwa).”]

The second renaissance, or the Third Period as it may be termed, begins in the following century with Sri Lanka’s recovery, coinciding more or less with major political changes in Burma. In Sri Lanka, it lasted for several centuries, and in Burma for much longer, though India lost all forms of Buddhism about that time or soon after.” (My comment: Unfortunately, Buddhaghosa only made the situation worse. He misinterpreted *Ānāpānasati* as “breath meditation” in his Pāli compilation, *Visuddhimagga*“; see “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#).”)

On p. 46: “In the first century CE, Sanskrit Buddhism (“Hīnayāna,” and perhaps by then Mahāyāna) was growing rapidly and spreading abroad. The Abhayagiri Monastery would naturally have been busy studying and advocating some of these weighty developments while the Great Monastery had nothing new to offer: (Comment: highlighting mine; note that Bhikkhu Ñāṇamoli specifically called the altered Hīnayāna “Sanskrit Buddhism”) the rival was thus able, at some risk, to appear go-ahead and up-to-date while the old institution perhaps began to fall behind for want of new material, new inspiration, and international connections, because its studies being restricted to the orthodox presentation in the Sinhalese language, it had already done what it could in developing Tipiṭaka learning (on the mainland Theravāda was doubtless deeper in the same predicament). Anyway, we find that from the first century onwards, its constructive scholarship dries up, and instead, with the reign of King Bhātika Abhaya (BCE 20–CE 9), public wrangles begin to break out between the two monasteries. This scene indeed drags on, gradually worsening through the next three centuries, almost bare as they are of illuminating information. King Vasabha’s reign (CE 66–110) seems to be the last mentioned in the Commentaries as we have them now, from which it may be assumed that soon afterward, they were closed (or no longer kept up), nothing further being added. Perhaps the Great Monastery, now living only on its past, was itself getting infected with heresies. But without speculating on the immediate reasons that induced it to let its chain of teachers lapse and to cease adding to its body of Sinhalese learning, it is enough to note that the situation went on deteriorating, further complicated by intrigues, till in Mahāsena’s reign (CE 277–304) things came to a head.

▪ **The excerpts end here.**

15. Note that *Abhayagiri* (which readily adopted *Mahāyāna* concepts) had been a rival to the *Theravada* Center of *Mahāvihāra* (**Great Monastery** in the above quote) for a long time.

- Reading the whole Introduction section (pp. 36-111) is necessary to get a good idea.
- Also, note that the periods mentioned in Conze’s book (and also in other sources like Wikipedia) can vary. The first written historical record was in the Sinhalese *Mahāvamsa*, compiled around 450 CE. **Thus, there are many “unverified historical accounts” up to at least 400 CE.**

True Teachings Must Be Pursued by Those Interested

16. After spending several years on internet forums trying to explain the glaring contradictions with current “mainstream Buddhism,” I recently realized that such “engagements” are stressful, a hindrance to my progress, and also can be harmful to those who are on the “other side” (believing their interpretations are correct.) I will focus on posting on this website and not get involved in any “debates.” Buddha Dhamma cannot be understood by engaging debates; it is fruitless to engage in debates. My only regret is not realizing it sooner.

- It is up to each person to decide which version is correct. My responsibility is to present my understanding to the best of my ability.
- How can someone decide which version is correct? As the Buddha pointed out, anyone should be able to figure that out by checking for consistency within the three *Piṭakas*: *Sutta*, *Vinaya*, and *Abhidhamma*.
- Only the Pāli *Tipiṭaka* remains faithful to Buddha's teachings because it has remained in Pāli, unaltered for 2000 years. Most current translations have grievous errors, and many of my posts point them out. I even started a new section, “[Elephants in the Room](#),” to point out the apparent logical contradictions that even an intelligent child can see. Also see “[Buddha Dhamma: Non-Perceivability and Self-Consistency](#).”

14.3 Methods of Delivery of Dhamma by the Buddha

December 12, 2015

1. Buddha Dhamma is undoubtedly the most complex “theory” in the world. It is truly amazing that such a deep philosophical doctrine has survived over 2500 years.

- However, we can be confident that the pure Dhamma still survives, because the three baskets of *sutta*, *vinaya*, and *abhidhamma* were written down in 29 BCE when there were still numerous *Arahants* were present.
- After about 100 - 200 CE, people started translating the *Tipiṭaka* into *Sanskrit* and also the *Mahāyāna* sect started writing their own *suttā* in *Sanskrit*; see, “[Historical Timeline of Edward Conze](#).”

2. Another important point to remember is that there is no single discourse in which the Buddha has drawn together all the elements of his teaching and assigned them to their appropriate place within some comprehensive system; see, “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).”

- Therefore, the same material was delivered in a variety of different ways over the 45-year “ministry” of the Buddha. If some mistakes were made in the transmission of one of the *suttā* or discourses, that would become apparent when compared with the numerous other discourses or the *Abhidhamma*.

3. The Buddha tailored his discourses to his audience at hand. Thus his teachings that have been transmitted encompass a broad spectrum, ranging from one-to-one conversations with people who had particular questions in mind to long discourses to audiences consisting of groups with wide-ranging mental capabilities.

- If the Buddha realized that it was not fruitful to explain a deep concept to an individual, he remained silent. One example cited is Buddha’s silence when a certain wanderer named Vacchagotta asked him whether there was an *Atman* or *āthma* (permanent soul) or not. Even though Buddha had clearly explained in *Paṭicca Samuppāda* that the concept of a lifestream with changing “*gathi*,” in this case, he remained in silence when Vacchagotta asked him the question twice. Vacchagotta then left.
- After Vacchagotta left, Buddha’s personal attendant, Ven. Ānanda, asked him why Buddha did not explain the concept that it is not correct to say “there is no soul” or “there is a soul” to Vacchagotta. The Buddha told Ānanda that he did not think Vacchagotta was mentally capable at that time to understand the concept, and that he did not want to confuse him. See the post, “[What Reincarnates? – Concept of a Lifestream](#)” for the correct explanation.
- It turned out that Vacchagotta later became a disciple and even attained *Nibbāna* through his efforts.

4. Other times, he would enunciate invariable principles that stand at the heart of the teaching: for example, *Abhidhamma* is a complete description of the working of the mind. The Buddha delivered this *Abhidhamma* material in summary form to his chief disciple, Ven. Sariputta, and it was Ven. Sariputta and his followers who expanded that summary to the form that we have today in the *Tipiṭaka*; see, “[Abhidhamma – Introduction](#).”

- But in most cases, instead of trying to provide the most thorough and intellectually deep answers, he tried to find the best way to steer people to the truth according to their mental capabilities. Some recent books have misrepresented such isolated one-to-one correspondence as indications that some fundamental issues have not been addressed by the Buddha. They are probably unaware that such questions have been answered in other *suttā*. I will point such instances as they come up in other posts.

Next, “[Misconceptions on the Topics the Buddha “Refused to Answer”](#)”,

14.4 Misconceptions on the Topics the Buddha “Refused to Answer”

Revised January 25, 2019; March 26, 2021; re-written October 9, 2022

The “Unanswered Questions”

1. Some say that the Buddha refused to answer a set of questions; see “[WebLink: en.wikipedia.org: The unanswered questions](https://en.wikipedia.org/wiki/The_unanswered_questions).” According to that article and others, the four questions that the Buddha did not answer are:

1. Is the world eternal?
2. Is the world finite?
3. Is the “self” identical to the body?
4. Does *Tathāgata* (Buddha/*Arahant*) exist after death?
 - Buddha did provide answers to those questions. But the answers depend on what one understands by the words “*loko*” (the world) and “*jīvaṃ*” (life.)

Buddha’s Method of Answering Questions

2. Buddha’s main concern at any given instance was to provide an answer that the audience at hand was able to comprehend.

- If the correct answer had befuddled the audience, he remained silent on that question. There are some *suttā* with such accounts.

3. A good example is when a monk named Mālun̄kyaputta came to the Buddha and asked several questions regarding the universe and stated that he would leave the order if the Buddha refused to answer them; see “[WebLink: suttacentral: The Shorter Discourse to Mālun̄kyaputta \(MN 63\)](#)”.

The Buddha told Mālun̄kyaputta, “Suppose Mālun̄kyaputta, a man is wounded by a poisoned arrow, and the friends and relatives bring him to a surgeon. Suppose the man should then say: ‘I will not let this arrow be taken out until I know who shot me; whether he is a Ksatriya or a Brahmana or a Vaisya or a Sudra (i.e., which caste); what his name and family may be; whether he is tall, short, or of medium stature; whether his complexion is black, brown, or golden; from which village, town, or city he comes. I will not let this arrow be taken out until I know the kind of bow shot me; the kind of bowstring used; the type of arrow; what sort of feather was used on the arrow, and with what kind of material the arrow was’. Mālun̄kyaputta, that man would die without knowing any of these things. Even so, Mālun̄kyaputta, if anyone says: ‘I will not follow the holy life under the Blessed One until he answers these questions such as whether the universe is eternal or not,’ he would die with these questions unanswered by the Blessed One.”

4. However, other *suttā* provided the answers, or they are inherent in the doctrine itself.

- For example, the answer to the fourth question should be evident to anyone who has understood the primary goal of an authentic Buddhist: “to stop the rebirth process”; see “[Four Noble Truths – Suffering and Its Elimination](#).”

5. The Buddha seems to have followed four ways of treating questions:

- i. Should answer some directly,
 - ii. others should be answered by way of analyzing them,
 - iii. counter-questions should answer some others, and
 - iv. put aside some since they serve no purpose.
- This is stated in the “[WebLink: suttacentral: Pañhabyākaraṇa Sutta \(AN 4:42\)](#).”

- As mentioned in the above section, depending on the audience, he chose the method that he deemed appropriate.

Answers According to Mundane Meanings

6. Nowadays, the words “*loko*” and “*jīvam*” are taken as “the world out there/cosmos” and “self,” as Wikipedia article of #1 indicates. Here, the short answers are: Yes; No; It is not correct to say there is a “self” or “no-self”; No.

The answers to the first two questions are in several *suttā*, but mainly in the *Aggañña Sutta* (DN 27). An introduction to that *sutta* is in [“Buddhism and Evolution – Aggañña Sutta \(DN 27\)”](#).

- As you can see in that post, the Buddha’s version sharply contrasts the current scientific understanding. For example, Earth was exclusively populated by humans who had subtle, invisible bodies in the beginning. This is the reverse of the currently adopted “theory of evolution” in science.
- However, as pointed out in that post, Buddha’s version had survived previous scientific theories. I have no doubts that further scientific discoveries will confirm Buddha’s version; also see [“Dhamma and Science – Introduction.”](#)

7. Think about the fact that starting with the Greek philosophers at the time of the Buddha (a coincidence), Western science took over 2500 years to reach the current level of understanding of the universe.

- Even two hundred years ago, the scientific understanding was limited to the Solar system and nothing beyond that. Now we know that there are billions of galaxies, each with billions of stars (most of which have planetary systems like our Solar system) and that all this started with the big bang.
- This slow transition took the genius and courage of people like Galileo, who sometimes sacrificed their lives to bring out the truth.
- But the Buddha knew all about the universe and how the mind worked 2500 years ago!

8. Buddha has explained that both theories of a “self” and “no-self” are wrong. That is discussed in detail in many *suttā*; see, for example, [“What Reincarnates? – Concept of a Lifestream”](#) and [“Anattā – A Systematic Analysis.”](#)

The Buddha’s following answer illustrates the urgency with which he asked the followers to “follow the path” diligently instead of wasting valuable time on metaphysical questions.

9. Buddha’s perspectives on many issues ranging from the working of the mind to those on the universe, are apparent in his teachings on *Abhidhamma* (and also in some main *suttā*, such as the *Aggañña sutta*). Fundamental aspects of the universe (infinite in space and time) are inherent in the doctrine.

- For example, his teachings are based on cause and effect (principle of causality). There can be no effects without prior causes. This is the opposite of the “Creator model,” which requires a Creator of the world. The causality principle NECESSARILY requires that there can be no beginning!
- Those principles are embedded in the teachings, but the Buddha avoided giving answers to specific questions, especially from individuals, because it would have confused those people.

Answers According to “Buddhist Meanings”

10. In most cases, by “*loko*” (and also “*sabba*” or “all,”) the Buddha meant “one’s world” and NOT the conventional meaning that scientists use for the “world out there” with innumerable stars and planets.

- One’s world is the five aggregates. That is all each “person” has ever experienced. But there is no “person” that “travels the rebirth process.” Each existence arises depending on causes and conditions (*Paṭicca Samuppāda*.)

- The Buddha has given clear answers based on the above in “[WebLink: suttacentral: Sassataditthi Sutta \(SN 24.9\)](#)” and “[WebLink: suttacentral: Asassataditthi Sutta \(SN 24.10\)](#).” The Buddha describes the five aggregates (*rūpa, vedanā, saññā, saṅkhārā, viññāṇa*) as the “*loka*.”
- The first position (“*loka*” is eternal) is *sassata ditthi* and the second position is *uccheda ditthi*.
- **Note:** The translator (of the English versions in the links) incorrectly translated “*loko*” as “cosmos,” the mundane meaning we discussed earlier. Also, he has truncated the five aggregates in the second *sutta* and the following *suttas*. The complete versions are there in the *Buddha Jayanthi Tipiṭaka* Edition.

11. The following two *suttas* address the issue of whether “*loka*” is infinite or not: “[WebLink: suttacentral: Antavā Sutta \(SN 24.11\)](#)” and “[WebLink: suttacentral: Anantavā Sutta \(SN 24.12\)](#).”

- The two *suttas* following that “[WebLink: suttacentral: Tamjīvamāṃsaṃsarīraṃ Sutta \(SN 24.13\)](#)” and “[WebLink: suttacentral: Aññamjīvamāṃsaṃsarīraṃ Sutta \(SN 24.14\)](#)” state that it is not correct to say either life (*jīva*) is the same as the body (*sarīra*) or not.
- Here, those with *uccheda ditthi* believe that life (*jīva*) is associated with the physical body (*sarīra*) in this life. When the body dies, that is the end of *jīva*.
- Those with *sassata ditthi* refer to *jīva* as a “lifestream that continues without end” because it has a permanent entity (*ātman*) associated with it.

12. There are four more *suttas*, “[WebLink: suttacentral: Hotitathāgato Sutta \(SN 24.15\)](#)” through “[WebLink: suttacentral: Nevahotinānahotitathāgato Sutta \(SN 24.18\)](#)” stating that it is not correct to take those positions on the “status of a Buddha/Arahant” after *Parinibbāna*. That is because we cannot express anything about *Nibbāna* in the terminology of “this world.”

- *Mahayanists* believe that *Buddha/Arahants* still exist in this world of 31 realms. That is the wrong view of the first *sutta* in the four *suttas*.
- The other three wrong views arise because of not understanding the following fact. Once attaining *Parinibbāna*, the “status” of *Buddha/Arahants* cannot be expressed with the vocabulary of “this world of 31 realms.” We can only say that *Buddha/Arahants* will not be reborn in this world.

14.5 Misinterpretations of Buddha Dhamma

Revised October 5, 2016; rewritten February 27, 2023

Misinterpretation of Buddha Dhamma (Buddhism) started with the emergence of *Mahāyāna* in India and was accelerated by the commentaries of Buddhaghosa.

1. After Emperor Asoka's reign [[WebLink: en.wikipedia.org: c. 304 – 232 BCE](https://en.wikipedia.org/wiki/Asoka)], no further steps were taken to hold back the inevitable *Brahminic* influence on Buddhism in India. Buddhism went through a gradual decline in India (despite or even because of the resurgent philosophical activity led by Nagarjuna, Asanga, Vasubhanudhu, and others around the beginning of the first millennium) and virtually disappeared from India during the first millennium.
2. The *Mahāyāna* version of Buddhism started with the works of Nagarjuna [[WebLink: britannica.com: 2nd century C.E.](https://www.britannica.com/topic/nagarjuna) or [WebLink: en.wikipedia.org: ca. 150–250 C.E.](https://en.wikipedia.org/wiki/Nagarjuna)], who, in all likelihood, had the best intentions for promoting Buddhism (even though he was naive enough to assume that Buddha Dhamma can be refined for the “new ages”).
 - These refinements became significant when [WebLink: D. T. Suzuki's books](#) were written in the early 1900s, and the original teachings were severely distorted. This is why I am so obsessive about ensuring my essays are compatible with Buddha's original teachings.
3. All these distortions in both *Mahāyāna* and Theravada versions have their origins in various philosophers (such as Nagarjuna and Buddhaghosa) trying to interpret Buddha Dhamma in terms of mundane concepts.
 - However, as pointed out in many posts on this website (see #8 below), it is easy to point out the inconsistencies with such mundane interpretations by Nagarjuna, Buddhaghosa, and others, especially with the evidence gained by the scientific advances made during the past few hundred years.
 - And such scientific evidence and those that are yet to be discovered will only confirm the pure Dhamma that stays intact in the *Tipiṭaka* to the day, as also pointed out in that post.
4. The *Tipiṭaka* (Pāli Canon) has the correct teachings of the Buddha. However, it is in a condensed form fit for listening, retention, recitation, memorization, and repetition – the five major elements in oral transmission.
 - Commentaries were composed to explain condensed versions, especially in some deep *suttas*. Even though many of the original commentaries (“*Sinhala Atthakata*”) have been lost, three commentaries compiled by *Arahants* at the time of the Buddha are still there with the *Tipiṭaka*: *Paṭisambhidāmagga*, *Petakopadesa*, and *Nettipakarana*. See “[Preservation of the Buddha Dhamma](#).”
 - This is a critical point. For example, the Buddha orally delivered the main *Suttas* over many hours; the *Dhamma Cakka Pavattana Sutta* was delivered to the five ascetics over several days. For easy transmission, these discourses were SUMMARIZED in *Magadhi* (and that particular format of “lining up” was termed Pāli); see “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).”
 - Each line, sometimes even a word in a *Sutta*, needs a further explanation; see “[Satipatthāna Sutta – Structure](#)” and follow-up posts. Such “explanatory texts” or “commentaries” were initially written in *Sinhala* and were called “*Sinhala Atthakata*.”
5. Commentaries in *Sinhala* accumulated for centuries, and in the fourth or fifth century CE, these commentaries were translated to Pāli (and edited with his ideas incorporated) by Buddhaghosa. **Subsequently, most of the original *Sinhala* commentaries were lost, and today we only have the edited summaries of Buddhaghosa, where he incorporated his *Vedic* concepts.**
 - Among the “tainted” commentaries to the *Tipiṭaka*, those on the *Abhidhamma* are dominated by the three commentaries of Buddhaghosa: (i) the *Atthasālinī*, “The Expositor,” the commentary to the *Dhammasaṅgaṇī*, (ii) the *Sammohavinodanī*, “The Dispeller of Delusion,” the commentary to the *Vibhaṅga*, and (iii) the *Pañcappakaraṇatthakatha*, the combined commentary to the other five treatises in the *Abhidhamma*.

- But it must be remembered that Buddhaghosa wrote those commentaries with his ideas as a former Hindu Brahmin.
- **The original *Tipiṭaka* remains unaltered, including those three original commentaries mentioned in #4 above.**

6. Besides writing those commentaries on the *Tipiṭaka* while he was in Sri Lanka, Buddhaghosa also wrote the *Visuddhimagga* (The Path of Purification) around 430 CE, wrongly considered an essential treatise on *Theravada* doctrine.

- I have pointed out many problems with Buddhaghosa's writings – including *Visuddhimagga* — at this site. See [“Buddhaghosa and Visuddhimagga – Historical Background”](#) and [“Buddhaghosa's Visuddhimagga – A Focused Analysis.”](#)
- The most common problems include misinterpretation of *Ānāpānasati Bhāvanā* as “breath meditation”; see, [“7. What is Ānāpāna?”](#) and [“Mahā Satipatthāna Sutta.”](#)
- He also incorporated *anāriya* versions of *kasiṇa* meditations. In *Ariya* (or true Buddhist) meditations, the object of meditation is *Nibbāna*, not a mundane object like a *kasiṇa* object.

7. This is a critical issue since most current *Theravada* institutions teach mainly the works of Buddhaghosa since those works are supposed to be reliable summaries of the teachings in the *Tipiṭaka*. Therefore, it is good to have the works of Buddhaghosa reviewed extensively.

- I will point out the most critical misrepresentations on this website. The Dhamma that I present here is, in my opinion, the correct interpretation of the *Tipiṭaka*. I hope you will come to that conclusion after carefully examining the material.
- More details can be found in [“Incorrect Theravada Interpretations – Historical Timeline”](#) and other posts in the [“Historical Background”](#) section.

8. Another critical point is that the Buddha advised not translating the *Tipiṭaka* word-by-word into any other language. See #5 of [“Preservation of the Buddha Dhamma.”](#)

- Of course, this tradition was broken with the emergence of the *Mahāyāna* version of Buddhism just 500 years after the Buddha. *Vedic* teachings highly influenced *Mahāyāna* Buddhism and both those highly influenced Buddhaghosa. That is how incorrect translations of *anicca* as “impermanence” and *anatta* as “no-self” got incorporated into *Theravada* Buddhism. See [“Misinterpretation of Anicca and Anatta by Early European Scholars.”](#)
- The problems with such incorrect translations can be easily seen because they lead to inconsistencies with the *Tipiṭaka*. The following section discusses these critical issues: [“Elephants in the Room.”](#)
- However, the teachings of the Buddha are entirely self-consistent. Those original teachings are in the *Tipiṭaka* and remain unaltered, including those three original commentaries mentioned in #4 above. See [“Buddha Dhamma: Non-Perceivability and Self-Consistency.”](#)

14.6 Preservation of the Buddha Dhamma

Revised October 28, 2017; November 11, 2017; January 9, 2019; re-written January 26, 2020; (revised June 19, 2021;) re-written June 25, 2021; revised August 29, 2022; November 19, 2022

Tipiṭaka – The Pāli Canon

1. After the passing away of the Buddha, his teachings were handed down verbally from one generation to the next over three to four hundred years. Preservation in the written form took place 2000 years ago.

- *Tipiṭaka* was composed into a form suitable for easy verbal transmission, in many cases in SUMMARY form. See, “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).” That is why it survived almost entirely in content over this long period.
- It was written down in Matale, Sri Lanka, at the turn of the first century, 2000 years ago. See “[Welcome to Aluvihāra Rock Cave Temple](#)” for information about where the *Tipiṭaka* writing took place.
- The other earliest written Buddhist documents are from Gandhāra in modern northwestern Pakistan; see “[The Buddhist Literature of Ancient Gandhāra](#)” by Richard Salomon (2018.) However, those do not provide a complete version of the *Tipiṭaka*; see p. 83 of the book.
- All other documents in Chinese, Tibetan, etc., date later and are derived from the Pāli *Tipiṭaka*.

Initial Oral Transmission

2. The discourses of the Buddha were said to have been delivered in the *Māgadhi* language. The written form was called Pāli. But Pāli does not have its script, so it was written down with Sinhala script.

- **That provides a straightforward way of sorting out the Mahāyāna literature, written in Sanskrit and never written in Pāli. Mahāyānic philosophers wrote all the Sanskrit *suttā* in Sanskrit.**
- Around the turn of the first millennium, translations of the *Tipiṭaka* to Chinese and Tibetan also took place. The original manuscripts in Pāli can be expected to contain most of the original discourses delivered by the Buddha.

3. Today, it is hard to fathom (especially for Westerners) that such accuracy would be possible in verbally transmitted material.

- However, we need to understand the background traditions and the monks’ determination over thousands of years that helped preserve most of the original teachings.
- Even today, some people have memorized large sections of the *Tipiṭaka*, especially in Myanmar (formerly Burma). In Myanmar, there are special examinations to test memorization. See, “[WebLink: myanmarnet.net: Tipitakadhara Sayadaws of Myanmar \(Burma\) in Five Decades](#).” Also, see “[WebLink: dhammadharo: Memorizing the Tipitaka](#).”
- During oral transmission, groups of *bhikkhus* memorized (overlapping) sections of the *Tipiṭaka*. Then during a *Sangāyanā* (Buddhist Council), they all got together and compared each other versions to make sure they were all compatible.

It Took Three Councils to Finalize the *Tipiṭaka*

4. A major reason for the assembly of the First Buddhist Council within three months of the Buddha’s *Parinibbāna* — around 480 BCE — was to organize the vast material.

- Within the next two hundred years, two more Councils were held to recite and verify the teachings and to finalize the *Tipiṭaka* in three broad categories (“*tī*” + “*piṭaka*” or “three baskets”). The second was held about a century after the first one.

- The third was held in 250 BC at Pataliputra under the patronage of King Asoka. The “three baskets” were completed at this Council with the finalization of the *Abhidhamma Piṭaka*; see #15 below.
- This completed *Tipiṭaka* was written down in 29 BCE at the Fourth Buddhist Council in Matale, Sri Lanka. This was the last Council attended ONLY by Arahants. Thus, we can be assured of its authenticity. Since Pāli does not have its script, it was written in the Sinhala language.

The authenticity of the *Tipiṭaka*

5. Another critical point is hidden in the history of the *Tipiṭaka*. Even up to the 20th century, the whole *Tipiṭaka* was written on specially prepared ola (palm) leaves. They typically deteriorate over 100 years or so and need to be rewritten. Even though that was a very labor-intensive process (about 60 large volumes in the modern printed version of the *Tipiṭaka*), it served another essential purpose.

- Sinhala language (both spoken and written) changed over the past 2000 years. **The need to re-write it every 100 or so years made sure that they took account of the changes in the Sinhala script.** Of course, the Pāli language has not changed.
- The following video gives an idea about the preparation process and the tools used to write:

[WebLink: youtube: Ola Leaf manuscripts](#)

- European Civil Servants saved existing Pali manuscripts of the *Tipiṭaka* in the 1800s. See “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).” The original documents on Palm leaves are still kept at the British Museum:

[WebLink: youtube: Sinhalese Palm Leaf Manuscripts Digitisation | The University of Manchester John Rylands Library](#)

Most *Suttā* Are Condensed Versions of the Discourses

6. **A critical point here is that a *sutta* is a CONDENSED version of discourse in many cases.** For example, the *Dhamma Cakka Pavattana sutta* was delivered to the five ascetics overnight. Imagine how many written pages would be if written verbatim! Yet, it is summarized in a few pages. The same is true for all the deeper *suttā*. Otherwise, it would have been impossible to transmit all those thousands of *suttā*.

- **The Buddha delivered most of his discourses in the *Māghadhi* (*māghadhi* = “*maga*” + “*adhi*” or Noble path) language.** *Tipiṭaka* was written in Pāli with Sinhala script. Pāli is a version of *Māghadhi* suitable for writing down oral discourses in a summary form suitable for transmission.
- Each Pāli word is packed with a lot of information, and thus commentaries (called “*Attha Kathā*”) were written to expound on the meaning of critical Pāli words and to explain the key phrases in the *suttā*.

Importance of the Commentaries

7. **Pāli *suttā* are not supposed to be translated word-by-word.** see, “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).” The *Tipiṭaka* was meant to be used with the commentaries. Commentaries compiled by *Arahants* at the time of the Buddha are still there with the *Tipiṭaka*: *Paṭisambhidāmagga*, *Petakopadesa*, and *Nettippakarana*. Venerable Mahinda started compiling Sinhala Commentaries 200 years later.

- Sadly those Sinhala commentaries were burned during the Anuradhapura era; see, “[Incorrect Theravāda Interpretations – Historical Timeline](#).”
- Fortunately, three original commentaries prepared by the foremost disciples of the Buddha (Ven. Sariputta, Ven. Kaccayana, etc.) during the Buddha's time were included in the *Tipiṭaka* (in the *Khuddhaka Nikāya*) and thus survived. The current revival of pure Dhamma by the Waharaka Thero in Sri Lanka was partially due to his perusal of these three documents (*Paṭisambhidāmagga*, *Petakopadesa*, and *Nettippakarana*).

8. With the loss of most of the commentaries and the non-prominence of the surviving three commentaries mentioned above, people started translating the *Tipiṭaka* word by word, a practice that continues to date: “[Elephant in the Room](#)” – [Direct Translation of the Tipiṭaka](#).” The problem was compounded by the increasing usage of the Sanskrit language beginning around the first century CE.

- For example, “*anicca*” was translated first to Sanskrit as “*anitya*,” and then the same Sanskrit word “*anitya*” was ADOPTED as the Sinhala translation for *anicca*. Similarly, “*anatta*” was translated to Sanskrit as “*anāthma*” and again was adopted as the Sinhala word for “*anatta*.” **This has prevented millions of people from attaining Nibbāna all these years**; see “[Anicca, Dukkha, Anatta – Wrong Interpretations](#).”
- Another good example is the translation of *Paṭicca Samuppāda* to Sanskrit as *Pratītyasamutpāda*; see, “[Paṭicca Samuppāda – “Pati+ichcha” + “Sama+uppāda”](#)” and the Wikipedia article, “[Pratītyasamutpāda](#).”
- It is NOT POSSIBLE to translate some critical Pāli words to Sanskrit, English, or any other language without losing their true meaning. **In many cases, I prefer to keep the original words (e.g., *anicca*, *anatta*, *taṇhā*) and explain their meanings.**

Buddha Prohibited Translation of the *Tipiṭaka* to Sanskrit

9. **The Buddha foresaw this and warned not to TRANSLATE the *Tipiṭaka* to Sanskrit.** There were two *Brahmins* by the names of Yameḷa and Kekuṭa who were experts on the *Vedic* Texts; they became *bhikkhus* and asked the Buddha whether they should translate the Pāli *suttā* to Sanskrit.

- The Buddha admonished them that Sanskrit was a language with musical overtones developed by the high-minded *Brahmins*. Thus, it was impossible to convey the true meanings of *Māghadhi* (Pāli) words in Sanskrit; see, [WebLink: tipitaka.fandom.com/wiki: Chulavagga 5.33](#). He admonished them not to translate his teachings to Sanskrit.
- In the Sutta Central English translation, the Pāli word for Sanskrit (*chandasa*) is mistranslated as “metrical”; see, “[WebLink: suttacentral: 15. Minor matters \(Khuddaka\)](#),” The relevant Pāli text starts as, “*Tena kho pana samayena yameḷakekuṭā nāma...*”.

10. **One grave problem today is that many people try to translate a given *sutta* word by word to other languages. Thus the Dhamma Cakka Pavattana sutta that we mentioned above is translated into a few pages.**

- For a comprehensive translation of that *sutta*: “[Dhammacakkappavattana Sutta](#).”
- **That is why most of the existing translations are inadequate at best and erroneous in most cases; see, “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).”**

Buddhaghosa’s Commentaries

11. Finally, just before the burning of the Sinhala commentaries, Buddhaghosa translated **and edited** those commentaries back to Pāli in his *Visuddhimagga* and other books.

- Even though he had made many errors (like including *kasiṇa* meditation and substituting the *ānāpānasati bhāvanā* with “breath meditation”), he had used the words *anicca* and *anatta* in the Pāli version of the *Visuddhimagga*; see, “[Buddhaghosa and Visuddhimagga – Historical Background](#)” and “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#).”
- Thus the incorrect translations of the words “*anicca*” (as “impermanence”) and “*anatta*” (as “no-self”) may have happened more recently; see, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”
- Now, let us systematically review the timeline of the *Tipiṭaka*.

Timeline – First Buddhist Council

12. That first Buddhist council was held three months after the *Parinibbāna* at Rājagaha, the capital of Māgadha.

- Shortly after the Buddha passed away, Ven. Mahakassapa, the *de facto* head of the Saṅgha, selected five hundred monks, all Arahants, to meet and compile an authoritative version of the teachings.

13. The *Cullavagga*, one of the books of the Pāli *Vinaya Piṭaka*, gives an account of how the authorized texts were compiled at the First Buddhist Council:

- Based on Venerable Upāli's recitation of *Vinaya*, the *Vinaya Piṭaka*, disciplinary matters were compiled.
- Venerable Ānanda then recited "the Dhamma" or the *Sutta Piṭaka*, i.e., the discourses, and based on this recitation the *Sutta Piṭaka*, the Compilation of Discourses, was compiled (Venerable Ānanda was supposed to have an amazing memory and had memorized all the *Suttā* preached by the Buddha).
- The *Abhidhamma* was rehearsed by all the *Arahants* present at the Council. Although they recited parts of the *Abhidhamma* at these earlier Buddhist Councils, it was not until the Third Council that it became finalized to its present form as the third and final *Piṭaka* of the Canon.

Finalization of *Tipiṭaka* at the Third Council

14. The Moggaliputta-Tissa *Thero* compiled the proceedings of the Third Council in the Kathavatthu, which became part of the *Tipiṭaka* (Three Baskets). During the Third Council, Arahants compiled the final version of the *Tipiṭaka* (as available today). It finalized the *Abhidhamma Piṭaka* and added several books on the *Khuddaka Nikāya*, and the *Kathavatthu*.

The composition of the *Tipiṭaka* is as follows:

1. The *Vinaya Piṭaka* is composed of five books: Major Offenses (*Prajika Pāli*), Minor Offenses (*Pacittiya Pāli*), Greater Section (*Mahavagga Pāli*), Smaller Section (*Culavagga Pāli*), and Epitome of the *Vinaya* (*Parivara Pāli*).
2. The *Sutta Piṭaka* consists of five *Nikāyas*: *Digha Nikāya* (Collection of Long Discourses), *Majjhima Nikāya* (Collection of Middle-Length Courses), *Saṃyutta Nikāya* (Collection of Kindred Sayings), *Aṅguttara Nikāya* (Collection of Discourses arranged by a number), and *Khuddaka Nikāya* (Smaller Collection).
3. The *Abhidhamma Piṭaka* consists of the following categories: *Dhamma Saṅghani* (Classification of Dharmas), *Vibhanga* (The Book of Divisions), *Kathavatthu* (Points of Controversy), *Puggala Paññatti* (Description of Individuals), *Dhātukatha* (Discussion regarding Elements), *Yamaka* (The Book of the Pairs), and *Paṭṭhāna* (The Book of Relations). Venerable Moggaliputta Tissa COMPILED *Kathavatthu* at the Third Buddhist Council.
 - That collection is the *Tipiṭaka* (Three Baskets) or the Pāli Canon that exists today.

Abhidhamma Piṭaka Finalized at the Third Council

15. The work on the *Abhidhamma Piṭaka*, started during the time of the Buddha by Ven. Sāriputta was not finalized until the Third Council. **The Buddha only taught the basic framework to Ven. Sāriputta.** It was completed over roughly 250 years by the lineage of *bhikkhus*, starting with Ven. Sāriputta. Of course, Ven. Sāriputta was one of the two chief disciples of the Buddha: While Ven. Moggallāna excelled in supernatural powers, Ven. Sāriputta excelled in Dhamma. He was only second to the Buddha in Dhamma knowledge.

- The minute details on the structure of a *citta vūthi* (a series of *citta*) of 17 thought moments, with each *citta* lasting sub-billionth of a second, can be seen only by a Buddha. The Buddha described only the

underlying principles to Ven. Sāriputta. Then Ven. Sāriputta and his group of *bhikkhus* (and their subsequent lineage) completed the monumental task of categorizing the Abhidhamma, starting with the fundamental entities.

- Bhikkhu Bodhi describes the origins of *Abhidhamma* in his book, “[Comprehensive Manual of Abhidhamma](#),” (2000); see pp. 9-11.
- As I mentioned, compiling *Abhidhamma Piṭaka* (after the Buddha described it in summary form to Ven. Sāriputta) was not a trivial task. That is why it took 250 years to finalize that work. Anyone with even a little knowledge of *Abhidhamma* would realize that it must be the work of a Buddha. See the “[Abhidhamma](#)” section at puredhamma.net.
- **The *Abhidhamma Piṭaka* is fully consistent with the *Sutta Piṭaka*.** I would be happy to discuss any perceived inconsistencies.
- **However, it is not necessary to learn *Abhidhamma* to attain *magga phala*.** It is an additional tool for those who like to get into details. It is truly a joyful experience to “see” how phenomena can be explained at a deeper level.

Writing Down the *Tipiṭaka* at the Fourth Council

16. This enlarged Canon, completed at the Third Council, was committed to writing in Sri Lanka in the first century BCE (29 BCE) at the Aluvihara Monastery at the Fourth Buddhist Council. The material in Pāli was written down in the Sinhala language (Pāli does not have its script).

Bhikkhus wrote on palm leaves with styluses, a pointed steel dagger-like instrument, which scratched the letters into the soft leaves. Ink made from berries was rubbed over the whole page and gently removed so that only the indentations retained the color. It is said that *Tipiṭaka* was also written down on gold leaves as well. These could be entombed inside *stupās*; see, the Wikipedia article “[Stupa](#)”

Translation of the *Tipiṭaka* to Other Languages

17. It is to be noted that Theravāda Buddhism was brought to Burma and Thailand from Sri Lanka in the first century CE. Over the next two centuries, it diffused into adjoining countries of Laos and Cambodia and survived in its purity in those countries as well to the present day. (In Cambodia, the Khmer Rouge regime in the 1970s massacred most monks, and the Buddha Dhamma is virtually extinct).

- However, the Chinese/Tibetan versions of the *Tipiṭaka* seem to have come from India. The Tibetan version seems to have undergone many revisions/additions and, in some cases, is far removed from the original teachings.
- While the *Saṅgha* (with the aid of most of the kings) in Sri Lanka took pride and honor in keeping the teachings intact, Buddhism underwent many changes in India, China, Japan, and Tibet. It then finally disappeared altogether from India around 1200 CE.

14.7 Historical Timeline of Edward Conze

Revised September 8, 2021; June 25, 2023

Edward Conze was a Mahāyāna scholar and translated the Mahāyāna Prajnapāramitā or *Perfection of Wisdom* sutras from original Sanskrit to English. See, [WebLink: WIKI: Edward Conze](#)

(Note that Sanskrit *sutrā* (sutra is the Sanskrit word for *sutta*) were composed by Mahāyāna philosophers like Nagarjuna (who were just philosophers) and are NOT original Pāli *suttā* delivered by the Buddha).

Conze was impressed with the Mahāyāna *sutrā*, and in the book, “On Indian Mahāyāna Buddhism” (1968), he analyzed the works of the Mahāyāna/Zen scholar D. T. Suzuki. Even though his bias towards Mahāyāna *sutrā* are clear, I selected his timeline, which clearly shows how Mahāyāna scholars wrote their own *suttā* and tried later to attribute those to the Buddha.

This historical timeline is discussed in detail by Edward Conze in his book, “A Short History of Buddhism” (1980). According to Conze, the history of Buddhism can be conveniently divided into four periods:

1. The old Buddhism largely coincided with what later came to be known as Theravāda
2. Rise of Mahāyāna,
3. Rise of the Tantra (Vajrayāna) and Ch’an (Zen),
4. No further divisions.

The first period is roughly 500 years; the second and third periods roughly cover the first thousand years of the current era (CE); the last thousand years can be considered as the fourth period. During this whole period, the Theravāda Dhamma was kept mostly intact. In the following description, the differences between the original teachings and the Mahāyāna ideology are also evident.

In the following I will present this story verbatim as told by Conze (starting at p. 45 of his book):

“.....About 100 BCE (roughly 400 years after the Buddha’s Parinibbāna) a number of Buddhists in India felt that the existing statements of the doctrine had become stale and useless. In the conviction that Dhamma required ever new re-formulations so as to meet the needs of new ages, new populations and new social circumstances, they set out to produce new literature which ultimately came to be known as Mahāyāna Buddhism. The creation of this literature is one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries. Repetition alone, they believed, cannot sustain a living religion. Unless counterbalanced by constant innovation, it will become fossilized and lose its life-giving qualities, they believed.

So far the Mahayanistic attitude seems quite logical. What is more difficult to understand is that they insisted in presenting the new writings, manifestly composed centuries after the Buddha’s Parinibbāna, as the very words of the Buddha himself. They followed the Mahasanghikas in minimizing the importance of the historical Gautama Buddha, whom they replaced by the Buddha who is the embodiment of Dhamma (dharmakaya). In the “Lotus of the Good Law”, we are told that the Buddha, far from having reached his enlightenment at Bodhgaya, abides for eons and eons, from eternity to eternity, and that He preaches the Law at all times in countless places and innumerable disguises.

.....Not content with this, the Mahayanists tried to link their own writings with the historical Buddha by a number of mythological fictions. They asserted that they had been preached by the Buddha in the course of his life on Earth, that parallel to the (First Buddhist) Council at Rajagaha, which codified the *Suttā* of the Theravāda, the Mahāyāna *suttā* had been codified by an assembly of Bodhisattvas on the mythical mountain of Vimalasvabhava; that the texts had been miraculously preserved for five centuries and stored away in the subterranean palaces of the Nagas, or with the king of the Gandharvas, or the king of the Gods. Then, as Nagarjuna puts it, “five hundred years after the Buddha’s Nirvana, when the Good Law, after having

gradually declined, was in great danger”, these treasures from the past were unearthed, revealed and made known, so as to revivify the doctrine.

What then were the main doctrinal innovations of the Mahāyāna? They can be summarized under five headings:

1. As concerns the goal there is a shift from the Arhat-ideal to the Bodhisattva-ideal;
2. A new way of salvation is worked out, in which compassion ranks equal with wisdom, and which is marked by the gradual advance through six “perfections” (*pāramitā*);
3. Faith is given a new range by being provided with a new pantheon of deities, or rather of persons more than divine;
4. “Skill in means” (*upayakausalya*), an entirely new virtue, becomes essential to the saint, and is placed even above wisdom, the highest virtue so far;
5. A coherent ontological doctrine is worked out, dealing with such items as “Emptiness”, “Suchness”, etc”.

We will now consider them one by one.

1. The goal of Arhantship is now relegated to second place. The Mahayanists strive to be a “Bodhisattva”. A Bodhisattva is distinguished by three features: (a) In his essential being he is actuated by the desire to win the full enlightenment of a Buddha, (b) He is dominated by two forces, in equal proportion, i.e., by compassion and wisdom. From compassion, he selflessly postpones his entrance into the bliss of Nirvana to help suffering creatures,..... (c) Although intent on ultimate purity, a Bodhisattva remains in touch with ordinary people by having the same passions they have. His passions, however, do not either affect or pollute his mind.

2. A Bodhisattva’s compassion is called “great” because it is boundless and makes no distinctions..... This enlightenment does not automatically entail the desire to assist others. Among the enlightened, they distinguish three types, two of them “selfish”, one “unselfish”. The “selfish” types are Arahants and Pratyekabuddhas, who are said to represent the idea of the Hinayana, of the “inferior vehicle”. The “unselfish” ones are the Buddhas, and the pursuit of the unselfish quest for enlightenment on the part of a Bodhisattva is called the “Buddha-vehicle”, of the “Great Vehicle” (*mahā-yana*).

A Bodhisattva must be a patient man. He wants to become a Buddha, but his distance from the transcendental perfection of a supreme Buddha, who both knows and is everything, will obviously be infinite. In one life it could not possibly be traversed. Countless lives would be needed, and a Bodhisattva must be prepared to wait for eons and eons before reaching his goal. Yet, he is separated from Buddhahood only by one single obstacle, i.e., his belief in a personal self. To get rid of himself is the Bodhisattva’s supreme task. By two kinds of measures he tries to remove himself – actively by self-sacrifice and selfless service, cognitively by insight into the objective non-existence of a self. The first is due to compassion, the second to wisdom.

The unity of compassion and wisdom is acted out by the six “perfections”, or “*pāramitā*”, the six “methods by which we go to the Beyond”. A person turns into a Bodhisattva when he first resolves to win full enlightenment for the benefit of all beings. The six are: the perfections of giving, morality, patience, vigor, meditation, and wisdom”.

This ends the quotation from Edward Conze’s book. (I have not added or edited anything other than to skip some text to make it concise).

Criticism of Conze’s Analysis

I agree with Conze’s analysis except for the statement in the very first paragraph: “The creation of this literature is one of the most significant outbursts of creative energy known to human history and it was sustained for about four to five centuries.” This literature, even though voluminous, only made a simple theory

much more seemingly confusing, and contradictory. See “[Key Problems with Mahāyāna Teachings](#),” “[Saddharma Pundarika Sutra \(Lotus Sutra\) – A Focused Analysis](#),” and “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”

- **The only fortunate thing about it is that *Mahayana* sutras are written entirely in Sanskrit and thus are easily distinguished from the original *suttās* in the Pāli *Tipiṭaka*.**
- In addition to the “improvements” that were added in India, further material associated with national customs was added when Mahāyāna Buddhism spread to China, Japan, and Tibet (and came to be known by different names such as Zen, Vajrayāna, etc.). See “[Background on the Current Revival of Buddha Dhamma](#).”

So, the premise of the Mahāyāna re-formulation of the Buddha Dhamma was to “refine and improve” the Dhamma of the Buddha. This is in sharp contradiction with one of the most fundamental concepts in Dhamma that only a Buddha can discover these laws of nature and BY DEFINITION, it is impossible to improve upon them. They themselves admit that a Buddha appears in the world after a long time, and **thus their attempt to change Buddha Dhamma is one of the fundamental contradictions in Mahāyāna.**

- We need to understand the essential difference between Buddha Dhamma and any other human accomplishment: All other human accomplishments involve the cumulative effort of many, whether it is science, philosophy, engineering, etc.; see, “[Dhamma and Science – Introduction](#).” **In contrast, Buddha Dhamma was the product of a single human who transcended the “human-ness” and became a Buddha.**

Furthermore, all those mundane human efforts are made within the system, using the knowledge acquired by the experience within the system; see, “[Gödel’s Incompleteness Theorem](#).” A Buddha transcends the human realm and discovers the “whole existence” of the 31 realms; see, “[The Grand Unified Theory of Dhamma](#).” The Mahāyānists took a “watered-down” version of the Buddha’s worldview, (which is not accessible to normal human beings but only to a Buddha,) **and then added their own theories.**

- This is why there are so many apparent contradictions in various versions of “Buddhism” today. Adding more “pluff”, which is wrong anyway by definition, only distorts the correct picture.
- I attempt to provide a self-consistent picture of the genuine teachings in the *Tipiṭaka* throughout this website. See “[Buddha Dhamma: Non-Perceivability and Self-Consistency](#).”

14.8 Why is it Critical to Find the Pure Buddha Dhamma?

Pre-2016 post; revised July 18, 2022

1. In 2014, I participated in an online discussion group on “Buddhism” for a few days. A couple of things that struck me were:

- There are a lot of people out there who see that there is something valuable in Buddha Dhamma. But there is a lot of confusion because so many conflicting ideas are brought up and discussed without a conclusion.
- Each person seems to have their version their own “theory” of what Buddha Dhamma is. In many forums, instead of having an honest discussion about what ideas are right and what is wrong, many people use the forums for “entertainment.” It is their “coffee break” to sit around and show off their “knowledge” and “wisdom.” **(I must say that I regularly participated in a couple of other discussion groups in 2014 where people seemed to be genuinely interested in having an open exchange of ideas; due to lack of time, I don’t participate in such discussions any more).**

2. It is a good idea to first decide what the goal of such a forum is. I think the goal should be to find and confirm the core ideas that the Buddha taught 2500 years ago. Let us eliminate all these different labels, Mahāyāna, Theravāda, etc. Since it does not appear to happen any time soon, I have decided to just present what I have found. I call it Buddha Dhamma. And that is what it was called until the term “Buddhism” came into vogue in the 19th century.

3. I have two key points to make:

- We can remove many bad ideas that crept into Dhamma by looking at the historical “evolution” of “Buddhism”; The main problem with the “evolution” of Dhamma is that it is not a germ idea that needs to be nurtured and refined: **Buddha Dhamma is the set of ultimate natural laws that a Buddha DISCOVERS.** Now, one can be skeptical about that, which is perfectly fine. Confidence in that belief comes from critically examining the evidence, which may come later. But let us make that assumption because that is a key idea in Buddha Dhamma: It is a rare event that a human being can discover the ultimate laws of nature; see [“Power of the Human Mind – introduction,”](#) and the follow-up posts.
- Modern science can be another useful tool in finding the truth or fallacy of some concepts involved; the “theories” of science are continually being tested and verified by thousand of independent scientists, so even though they are not infallible, they are better than many speculations by individuals. And there is a key difference between finding nature’s laws via the scientific method and how a Buddha finds them; see [“Dhamma and Science – Introduction.”](#)

I will use both these tools in presenting my case.

4. The goal (and the motivation) in finding true Dhamma (or any kind of true salvation for those who believe in any other religion or belief system) is different compared to a philosophical debate. One could “win an argument” in a philosophical debate, especially if “winning” means persuading more people in the audience. One could thus “win a debate,” but deep inside, one knows the argument has flaws. It is like winning a court case and freeing a criminal. The criminal (and may be even the lawyer) knows that he/she committed the crime. Even though the consequences will not be paid in prison, they will be paid according to the Dhamma or nature’s laws.

5. If we can recover those correct laws that the Buddha taught, we can gain the benefits of knowing them and following them. It is not about winning an argument. It is ALL about finding the truth for oneself. If what Buddha said is true, then this world is much more complex than most people think, and there is much more suffering if one does not use the remaining time in this life wisely.

6. Then there is this naive argument: “All religions work for the good of mankind. Do not criticize any religion or sect within Buddhism.” But some of those people also say, “Our sect of Buddhism is the best version because we are so compassionate that we will not attain Enlightenment until EVERYONE is ready”. As we

will see below, this oath is against one of the five precepts in Buddha Dhamma, promising not to lie. I will not talk about other religions, but I will point out the flaws in many existing versions of “Buddhism” today because **that is the compassionate thing to do.**

7. If one is truly compassionate, one should try to find the true Dhamma (because there is only one set of natural laws) and SHARE it with anyone interested. Dhamma is not something that anyone can GIVE to anyone else. Even the Buddha could only teach those who would listen to him. Some people even question the compassion of the Buddha when they hear this story from the Tipiṭaka:

- A butcher named Cundasukara lived right next door to the Jetavanaramaya, where the Buddha resided for a long time. Some may wonder why the Buddha did not try to “save” Cundasukara by teaching him the right path. *Bhikkhus* could hear the screams of the pigs being slaughtered and asked the Buddha why he would not try to teach Dhamma to Cundasukara. The Buddha told them that Cundasukara would accrue much more bad kamma if he tried to do that. Killing pigs leads to much bad kamma, but unimaginable bad kamma could be accumulated by having hateful thoughts towards a Buddha: see, “[How to Evaluate Weights of Different Kamma](#).” One could accumulate more bad kamma by hurting the feelings of a human being than by killing an animal, and hateful thoughts towards a Buddha can be infinitely worse than hurting a normal human being. Therefore, sometimes true compassion can be hidden.
- In my way of thinking, I would not be acting compassionately if I did not point out these flaws in both Mahāyāna and Theravāda because I have experienced the benefits of the true and pure Dhamma.
- My goal is not to try to “convert” anyone to anything. The Buddha did not try to convert anybody. It is up to each person to make their own decisions because one is responsible for one’s future, and no one else is. Most of us are lucky to live in societies where we can make our own decisions.
- As I keep emphasizing, Buddha Dhamma describes the ultimate laws of nature. Anyone with any religious background, or an atheist, can follow Dhamma and should be able to see that it does describe the laws of nature. However, it is critical to find the true Dhamma. The only way to do that is to check for consistency at ALL TIMES and to weed out the bad versions.

8. In the following few posts we will examine the problems in many different versions of Mahāyāna and Theravāda. If you see any flaws in my arguments, please send me a comment. **It is possible that I could make a mistake, and if so I will correct them.** I hope all those who read these posts will keep an open mind because we all should have the same goal: finding the pure Dhamma that will benefit us all.

Problems with Mahāyāna and Theravāda are discussed in the section “[Historical Background](#).”

14.9 Key Problems with Mahāyāna Teachings

Revised September 2, 2019; June 11, 2021; re-written September 28, 2022

Main Contradictions

1. The following are just three major contradictions of “*Mahāyāna Buddhism*” with the teachings of the Buddha.
 - i. *Mahāyānists* say that each person needs to attain *Buddhahood*. By “*Buddhahood*,” they mean a “*Sammā Sambuddha*” like Buddha Gotama. They say even *Arahants* like Ven. Sāriputta needs to attain the *Buddhahood*!
 - ii. “*Bodhisatta* vow” is even worse. Not only each person needs to become a *Sammā Sambuddha*, but they need to wait until “everyone” is ready to become a *Sammā Sambuddha*. They have no idea how hard it is to become a *Sammā Sambuddha*.
 - iii. Those who initiated the *Mahāyāna* version (a mere 500 years after the *Parinibbāna* of the Buddha Gotama) declared that the teachings had become “outdated” and needed to be “updated.”
 - iv. Any sentient being can attain the state of a *Sammā Sambuddha* (all have the “Buddha nature.”)
 - I discussed (i) and (ii) above in the post “[Saddharma Pundarika Sutra \(Lotus Sutra\) – A Focused Analysis.](#)”
 - This post will discuss (iii) and (iv) below. But let me first emphasize the problems with (i) and (ii) above.

Summary of the First Two Contradictions

2. The main problem with (i) and (ii) above is a conflict with a fundamental tenet of Buddha Dhamma. A Buddha comes to this world after a very long time and DISCOVERS the laws of nature; *Mahāyānists* agree that it takes eons (billions of years) to fulfill the “*pāramitās*” and to become a Buddha.
 - Then they turn around and say that EVERYONE (meaning all sentient beings) must SIMULTANEOUSLY attain the *Sammā Sambuddha* status. Given that there are an uncountable number of sentient beings, that is utterly foolish.
 - Furthermore, the Buddha has clearly described the uniqueness of a *Sammā Sambuddha* (“[WebLink: suttacentral: Ekapuggalavagga \(AN 1.170-187\)](#)”) and the difference between a *Sammā Sambuddha* and an *Arahant*: “[WebLink: suttacentral: Sammāsambuddha Sutta \(SN 22.58\)](#).”
 - Thus, the “gap” between a *Sammā Sambuddha* and an *Arahant* is enormous. Similarly, a huge difference exists between an *Arahant* and an average human (*puthujjanika*.) [*puthujjanika* : [adj.] [fr. *puthujjana*] common, ordinary J. I,360 (of iddhi).]
3. The first thing one is supposed to do in becoming a *Mahāyāna* Buddhist is to take the “*Bodhisattva* vow.” They say each being should endeavor to become a Buddha, i.e., each person should be a *Bodhisattva*.
 - Those who initiated this idea a long time ago probably did not know that there is an infinite number of sentient beings in this world. Each human body has a vast number of microscopic beings. See, “[There are as many creatures on your body as there are people on Earth!](#)”.
 - There are 1000 trillion just ants on this Earth: “[WebLink: gotreequotes.com: How Many Ants Are There in the World?](#).” Or do they not count other living beings?
 - In this eon (basically the lifetime of the Solar system of about 4.5 billion years), there have been four Buddhas. One more Buddha is to appear. That is truly an exception. Before this eon, 30 eons (trillion years!) did not have a single Buddha appearing. So, how long would one wait to become a Buddha, i.e., remain a *Bodhisattva*? **And will all beings (or even the human population today) be able to become Buddhas in the same eon, let alone at the same time?** Utterly foolish!

Teachings of a *Sammā Sambuddha* Can Be Outdated?

4. Getting to the issue (iii), *Mahāyānist* forefathers stated Buddha Dhamma needed to be “refined” for the changing times. See “[Background on the Current Revival of Buddha Dhamma](#).” **How can the ultimate laws of nature discovered by a Buddha be “refined” or “revised”? I hope someone can answer this fundamental question.**

- Within 500 years of the passing away of the Buddha, the Indian *Mahāyānists* started not only refining but incorporating concepts that were alien to Buddha Dhamma.
- If it needed refining after 500 years, how come they have not kept up with the updating process? **One would think they would be doing a significant revision these days with so many changes in science and technology.**
- What has happened is the opposite: Science and technology are consistent with the original Dhamma. People will gradually realize that those alien concepts in Mahāyāna do not make sense.

Treating Buddha's Teachings as Philosophy

5. Those who started this revision did not understand the central idea of *Nibbāna*. They never mention concepts like *anicca*, *dukkha*, or *anatta*. So, they defined those in their terms and then got into a slippery slope in explaining those terms by inventing more concepts. It snowballed, and in the words of Edward Conze, who translated many *Mahāyāna* texts to English:

- “.....About 100 BCE (roughly 400 years after the Buddha's Parinibbāna), many Buddhists in India felt that the existing statements of the doctrine had become stale and useless. They were convinced that Dhamma required new reformulations to meet the needs of new ages, new populations, and new social circumstances. So they set out to produce new literature, which ultimately became known as Mahāyāna Buddhism. The creation of this literature was one of the most significant outbursts of creative energy known to human history and sustained for about four to five centuries. Repetition alone, they believed, cannot sustain a living religion. Unless counterbalanced by constant innovation, it will become fossilized and lose its life-giving qualities, they believed”.
- (See “[Historical Timeline of Edward Conze](#)”).
- For someone who is not familiar with the Buddha's original teachings, those philosophical arguments may look impressive, as they did for Edward Conze. We will examine those concepts in detail in upcoming posts. I have discussed the concept of “emptiness”; see the link below.

Forefathers of *Mahāyāna* Were Philosophers, Not *Ariyas*

6. None of the *Mahāyānist* “philosophers” such as Nagarjuna, Vasubandhu, and Asanga are documented as *Arahant* or even a *Sotāpanna*. They were like the philosophers of today with their “theories about the world.” They also had an aversion to the concept of an *Arahant*.

- The *Mahāyāna sutras* originated with Nagarjuna, who lived 150-250 CE in India. Thus, the Buddha's original teachings went underground somewhere before 200 CE, within about 700 years of the Buddha's *Parinibbāna* (passing away).
- **Thus those Indian intellectuals like Nagarjuna were just like the philosophers from the time of Socrates. They make all kinds of speculations consistent with the “knowledge” about the “world” at any given time.**
- The Buddha did warn of this outcome: He said: “there will be other versions that look like Dhamma and feel like Dhamma. Just like when there are imitations of gold coming to the market, the real gold goes underground” ([WebLink: suttacentral: Saddhamma Patirupaka Sutta \(SN 16.13\)](#)). That has been the case for over 1800 years.

- But the truth comes out eventually. That time could well be now. The correct interpretations of *anicca*, *dukkha*, and *anatta* have been hidden for hundreds of years.

The “Updates” Violate the Core Teachings of the Buddha

7. So, what are these revisions that the *Mahāyāna* forefathers made?

Edward Conze has listed five doctrinal “innovations” of the *Mahāyānists*; see “[Historical Timeline of Edward Conze](#).” They are:

- As concerns the goal, there is a shift from the “*Arahant-ideal*” to the “*Bodhisattva-ideal*.”
- A new way of salvation was worked out: compassion ranked equal with wisdom.
- Faith is given a new range by being provided with a new pantheon of deities.
- “Skill in means” (*upāyakaśalya*), an entirely new virtue, becomes essential to the practitioner. That is placed even above wisdom, the highest virtue in Buddha Dhamma.
- A coherent ontological doctrine was worked out, dealing with such items as “Emptiness,” “Suchness,” etc..” But it is philosophy; see, “[What is Sunyāta \(Emptiness\)?](#)”.

8. We will discuss the critical contradictions of these revisions with the Buddha’s original teachings (see i-v below) and go into detail later.

- The basic idea of Buddha Dhamma is that each human being has a unique mind. But greed, hate, and ignorance defile a mind. Because of that, each person commits immoral acts and subsequently “pays for those actions,” suffering is the net result of the cycle of rebirths. One gets out of this cycle of rebirth by purifying one’s mind; one who has accomplished this task is an *Arahant*. No person can purify another person’s mind. *Nibbāna* is not an abstract concept. See the subsection “[Nibbāna](#).”
- One attains *Nibbāna* when one purifies the mind of ALL defilements. That is when one has ultimate wisdom or *paññā*. There is no way to equate compassion with *paññā*. One can be compassionate to the maximum, but that does not mean one has gotten rid of ignorance. Those beings in the *Brahma* world do not generate any hateful thoughts; they have perfected the four *Brahmavihara*: *mettā*, *karunā*, *muditā*, and *upekkhā*. They don’t have a trace of hateful thoughts. Yet, they have ignorance (of the Four Noble Truths) and will one day be reborn in the four lower realms. Therefore, this is also a significant contradiction. See, “[Sotāpanna Stage of Nibbāna](#).”
- Buddha said life in the human realm is better than any other (except for those reserved for the *Anāgāmis*.) That is because the easiest to attain *Nibbāna* is from the human realm. Some beings in higher realms can be helpful to us, and we should share our merits with them. However, a human is not supposed to worship any other being. One must only have faith in the Buddha, Dhamma, and Saṅgha. No other living being can help with our goal of attaining *Nibbāna*.
- “Skill in Means,” or whatever other term anyone comes up with, runs into the same problem as compassion above in (ii). Such ideas run against the core teachings of the Buddha. Even if one gets rid of greed and hate but still has ignorance, one will get back the greed and hate DUE TO ignorance. One attains *Nibbāna* by cultivating wisdom.
- Mahāyāna*’s descriptions of all these philosophical concepts like emptiness or *sunyāta* are just a lot of empty words. They have simpler explanations consistent with original teachings; see the links below. The *Mahāyānists* had to re-invent alternate descriptions for these terms. The original meanings conflicted with their “revisions” discussed in i-iv.

Now, to address the issue (iv) in #1 above.

Buddha Versus *Sammā Sambuddha*

9. Buddha means “to stop *bhava*” (*bhava* + *uddha*.) Only a *Sammā Sambuddha* can figure out how to stop grasping various types of *bhava* (*kammic* energies) that we have accumulated, thus stopping future suffering.

- In principle, it is possible to call an *Arahant* a Buddha since an *Arahant* has stopped grasping a new *bhava*. However, no *Arahant* could have gotten to the “*bhava uddha*” status without learning/comprehending the teachings of a *Sammā Sambuddha*.
- But it has become customary to reserve the term “Buddha” as a shortened version of “*Sammā Sambuddha*.”
- The term “Buddha nature” is discussed without the above understanding. See “[WebLink: en.wikipedia.org: Buddha-nature](http://en.wikipedia.org: Buddha-nature).”

Summary

10. Those who follow the Mahāyāna version do that for several reasons. (i) They are born into *Mahāyāna* tradition (just like I was born to Theravada.) (ii) They have had no exposure to other versions of Buddhism. The problems with *Mahāyāna* versions are not due to their making. But it is time to start changing those features that contradict Buddha's original teachings.

- Teachings of a *Sammā Sambuddha* like Buddha Gotama cannot be “updated.” Buddha Dhamma is “timeless” (*akāliko*.) Of course, the teachings of a *Sammā Sambuddha* only last a relatively short time (in the *Samsaric* scale.) Those “timeless truths” about nature are re-discovered by the next Buddha. All *Sammā Sambuddhas* re-discover and teach the same *Paṭicca Samuppāda*.
- There needs to be an open discussion about weeding out the inconsistent material from all sects and recovering the pure Buddha Dhamma for all to benefit.

14.10 Saddharma Pundarika Sutra (Lotus Sutra) – A Focused Analysis

Revised August 13, 2019; July 26, 2020; December 3, 20121 (#3); August 24, 2022; September 27, 2022

Saddharma Pundarika Sutra (Lotus Sutra) is a famous *Mahāyāna sutra*. It is full of contradictions with the genuine teachings of the Buddha.

Difference Between a *Sutra* and *Sutta*

1. This *śūtrā*, written by several Indian philosophers over hundreds of years, led to the gradual formation of Mahāyāna Buddhism over that period. Note that I am NOT referring to it as a *sutta*. *Suttā* are the original teachings of the Buddha delivered in the *Māghadhi* language. They were subsequently written down in Pāli and are available in the *Tipiṭaka*.

- In contrast, all Mahāyāna *śūtrās* were written after the *Parinibbāna* (passing away) of the Buddha. Furthermore, they all are in Sanskrit without exception.
- Thus at least we have a clear way of distinguishing the original discourses by the Buddha (*suttā*) and the Mahāyāna *śūtrās* written by laypeople hundreds of years after the Buddha.
- Even in the Theravāda tradition, the question often arises regarding the interpretation of key concepts. As mentioned in the *Tipiṭaka*, this problem was there, even DURING the time of the Buddha.

How to Verify the Authenticity of Buddha Dhamma

2. Once, Mahā Prajapathi Gotami *bhikkhuni*, Prince Siddhartha's stepmother, approached the Buddha and pointed out that some *bhikkhus* were teaching incorrect interpretations of the Dhamma. She feared things would get out of hand after the *Parinibbāna* of the Buddha. "How can the future generations figure out the correct version of Dhamma?" she asked the Buddha.

- The Buddha agreed that it is inevitable that wrong interpretations will always be there but said there is a way to identify the correct version. He always said to look for consistency with the Four Noble Truths, as explained in the *suttā*. The Buddhist principle of Cause and effect is defined in the *Paṭicca Samuppāda*. How to live a moral life by getting rid of *lobha/rāga* (greed), *dosa* (anger/hate), and *moha/avijjā* (ignorance of the Four Noble Truths) is laid out in the *Vinaya*.
- These teachings lead to *rāgakkhaya*, *dosakkhaya*, and *mohakkhaya* (getting rid of *rāga*, *dosa*, and *moha*).
- If a version of Dhamma does not lead to *rāgakkhaya* (reduction of greed), *dosakkhaya* (reduction of hate), and *mohakkhaya* (reduction of ignorance), then that version should be discarded. Internal consistency must be there too.

Three Ways to Attain *Nibbāna*

3. A bit of background material before we discuss this *śūtrā*. According to the Buddha, there are **three ways** to attain *Nibbāna*:

- A **Sammā Sambuddha** (like Buddha Gotama) discovers the Noble Eightfold Path and achieves *Nibbāna* through his efforts, AND he can teach the doctrine to others.
- A second way to attain *Nibbāna* is to learn Dhamma from a *Sammā Sambuddha* or a true disciple of his. That is how **an Arahant** reaches *Nibbāna*. An *Arahant* is also a **Sāvaka Buddha**. Note that a "Sāvaka Buddha" is different from a "Buddha Sāvaka" (or "Ariya Sāvaka") which identifies any Noble Person above the *Sotāpanna Anugāmi* stage.
- Then there are **pacceka Buddhas** who discover the Path by themselves but are not capable of explaining it to other people.

- The three types are in the “[WebLink: suttacentral: Nidhikanda Sutta \(KN Kp 8\)](#)” in the following verse: “*Paṭisambhidā vimokkhā ca, yā ca sāvakaṇāramī; Paccekabodhi buddhabhūmi, sabbametenā labbhati.*”

Only One Vehicle to *Nibbāna* (the “Great Vehicle” or Mahāyāna)?

4. Now, let us discuss how this *sutrā* paved the way for the *Bodhisattva* concept in Mahāyāna.

This *sutrā* starts with the Buddha saying that even though he had taught previously there were three paths to *Nibbāna*, he now admits that there is only one. When Ven. Ānanda asked why, he said he did not think people were “ready” for this higher doctrine. Instead of three vehicles (or paths) that one can take, there is only one. It is the great vehicle or the Mahāyāna (“*mahā*” is great, and “*yāna*” is a vehicle). And this is the path he took by striving for eons as a *Bodhisattva* to become a Buddha.

- Continuing with this *sutrā*, now he (the Buddha) was advising everyone to become a *Bodhisattva* and to attain Buddhahood!
- They have no idea how difficult it is to attain *Buddhahood*.
- Then he assures all those *Arahants* present there, including Ven. Sāriputta that they will become Buddhas. That is a complete lack of understanding of the concept of an *Arahant*. An *Arahant* will not be reborn; thus, there is no way for an *Arahant* to become a Buddha.
- Furthermore, the Buddha has clearly described the difference between a *Sammā Sambuddha* and an *Arahant*: “[WebLink: suttacentral: Sammāsambuddha Sutta \(SN 22.58\)](#).” The uniqueness of a *Sammā Sambuddha* is described in a series of short *suttas*: “[WebLink: suttacentral: Ekapuggalavagga \(AN 1.170-187\)](#).”

Now let us go through a few more “obvious inconsistencies” in the *sutrā*.

The *Sutrā* Opens With a Lie (*Musāvāda*)

5. Astonishingly, the *sutrā* opens with, “Thus have I heard...”, a big *musāvāda* (an untruth) Ven. Ānanda is providing the details of the *sutrā*.

First, a brief background is in order. Venerable Ānanda, who knew all the *suttā* by heart, recited them at the First Buddhist Council. Thus any given *sutta* in the *Tiṭṭaka* starts with clarification, “Thus have I heard...” to indicate that this was what Venerable Ānanda had heard himself. In trying to give the impression that this *sutrā* was also one delivered by the Buddha, the authors of the *Lotus sutrā* attempted to deceive the readers.

- Historians generally accept that the *Lotus sutrā* was written much later after the passing away (*Parinibbāna*) of the Buddha Gotama. That is true of all other *sutrās* written in Sanskrit.
- The oldest parts of the text (Chapters 1–9 and 17) were probably written between 100 BCE and 100 CE, and most of the text was complete by 200 CE. See, for example, [WebLink: WIKI: Lotus Sutrā](#). Thus it was written by several authors over 100 years or more. A translation was made from Sanskrit to Chinese in 255 CE, the earliest historical documentation of its existence.

Reads Like a Fairytale

6. The middle of the *sutrā* is devoted to describing the “universal accessibility” of the Buddhahood to anyone. Here it reads like a fairytale with astounding stories of accomplishments. For example, the daughter of the dragon king Sagara astonishes the assembly by performing various supernormal acts and says she can attain the Buddhahood “in an instant.”

- However, those *sutrā* also stress the importance of faith and devotion to get to Enlightenment. There is less emphasis on the need for wisdom. That is blind faith!

The *Bodhisatta* Vow

7. A critical problem is the *Bodhisatta* vow that a Mahāyāna Buddhist agrees in advance to take (see, [WebLink: WIKI: Bodhisattva vow](#)). The promise is to wait until “everyone is ready to attain the Buddhahood.” It is not clear how or who can determine WHEN everyone is ready.

- Current scientific facts point to the existence of an innumerable number of living beings; see, “[There are as many creatures on your body as there are people on Earth!](#)” Therefore, it is a critical question how all these beings can attain Buddhahood simultaneously.
- Furthermore, it seems contradictory that Buddha Gotama and other previous Buddhas did not wait for anyone else.

Is a Buddha Eternal?

8. The story gets even more fascinating in Chapter 16 (presumably as a different writer of the *śūtrā* comes up with another idea). That is when Buddha Gotama reveals that he is an eternal being. He had attained the Buddhahood an incalculably distant time in the past. Even though he sometimes seems to pass away to *nirvāṇa* (Sanskrit word for *Nibbāna*), he periodically makes appearances in the world.

- This declaration makes the Buddha more like a Creator God who has always been there! And there is no discussion on the issue of whether there was a beginning to this world.
- It seems to me that the philosophers who wrote Mahāyāna *śūtrās* had no idea of the concept of *Nibbāna*! By the very definition, the whole idea of attaining *Nibbāna* is to dissociate from this suffering-filled material world: There are several posts on this website ranging from “[Three Kinds of Happiness – What is Nirāmisa Sukha?](#)” to “[What are Rūpa? – Relation to Nibbāna](#)” on the concept of *Nibbāna*.
- Then there is the issue of other Buddhas being present at that assembly too. And they all seem to be “at the same level.” Thus the question arises as to who was the first Buddha and why those other Buddhas “did not wait until everyone else was ready for the Buddhahood.”

Absence of Key Doctrinal Concepts

9. Most of the sections of the *śūtrā* hyperbolize the value of the single, great vehicle (Mahāyāna) to attain *Nibbāna*. That is in contrast to the three vehicles of *Sammā Sambuddha*, *Pacceka Buddha*, and *Arahant*; see #3 above. **There is no discussion on the actual distinguishing doctrinal concepts of the single vehicle other than just saying that it has the advantage of “easy accessibility of the Buddhahood.”** What makes this “single-vehicle” approach different from the original “three-vehicle” approach in terms of details in Dhamma? For example, does it have a new way of describing the Noble Eightfold Path, *Paṭicca Samuppāda*, or the Four Noble Truths?

- The *śūtrā*, like many other Sanskrit *śūtrās*, only mentions those critical foundational concepts of Buddha Dhamma in passing. There is no discussion on them, let alone pointing out any difference from the original doctrine. **I am amazed that no one even refers to this glaringly obvious point. What sets the “single-vehicle” approach apart from the original “three-vehicle” approach other than the name change?**
- But the real problem is that in changing some key concepts. For example, getting rid of the *Arahant* concept and making the Buddha effectively a Creator God. This *śūtrā* paved the way to distort the Buddha Dhamma for generations.
- In terms of the necessary conditions set forth by the Buddha, does this *śūtrā* clarify how to reduce greed, hate, and ignorance? Can anyone point to such aspects? Besides grandiose descriptions, there is nothing substantial in terms of doctrine, let alone a revised doctrine. All it does is gravely distort foundational concepts like *Nibbāna*, *Buddhahood*, and *Arahanthood* with the concept of a “single-vehicle.”

Numerous Untruths, Inconsistencies, and Exaggerations

10. There are so many untruths, inconsistencies, and exaggerations in this *sutrā* that I only have space in this essay to point out the gross problems that are vividly displayed. That is why the post is a “focused analysis.”

- Here is an English translation of the *sutrā* available online, so that anyone can peruse through and see the apparent difference between this *sutrā* and any Pāli *sutta* that is in the *Tipiṭaka*: [WebLink: PURIFYMIND: Lotus Sutra](#)
- One could compare this *sutrā* with the actual Pāli *suttā* that I started discussing; see “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#),” and the posts on the *Mahā Satipaṭṭhāna Sutta* below that.
- I must emphasize that one needs to evaluate this *sutrā* in the context of the profound and self-consistent Buddha Dhamma. One can get a glimpse of this by examining the “[Key Dhamma Concepts](#),” “[Paticca Samuppāda](#),” and “[Abhidhamma](#)” sections on this website, where I have only begun to lay out the teachings, especially in the Abhidhamma section.

11. I would be happy to respond (and correct any legitimate errors in the analysis) if anyone can point out any problems with my analysis. Please send me a comment at lal@puredhamma.net.

- This analysis is consistent with the central theme of this website. To point out problems with both Mahāyāna and Theravāda versions as being practiced today. Several posts criticizing both *Mahāyāna* and the current versions of *Theravāda* at “[Historical Background](#).”
- It is for the benefit of everyone that we should remove (or at least be aware of) all inconsistencies and untruths. Then the current and future generations will have a version of Buddha Dhamma close to the original version.

14.11 What is Sunyata or Sunnata (Emptiness)?

Revised (added #6) December 28, 2015; November 26, 2017; December 16, 2017; July 1, 2022

1. In Mahāyāna Buddhism, there are books written about *Suñyāta* (actually it is *Suññāta* in Pāli) or emptiness. Mahāyāna Buddhism tries to make a big deal out of *suñyāta* because their forefathers (those who started the Mahāyāna tradition) could not understand the concept of *Nibbāna*. It is unfortunate that many people who are only introduced to Mahāyāna teachings (and are not aware of the original teachings of the Buddha) believe that *Nibbāna* is an abstract concept.

- However, *Nibbāna* is a very simple concept if one understands pure Buddha Dhamma; see, “[Nibbāna – Is it Difficult to Understand?](#).”
- But it can be examined at deeper levels too: “[Nibbāna “Exists”, but Not in This World.](#)”
- See more at “[Nibbāna.](#)”

2. What is emptiness?

- When entity A is devoid of entity B, then it can be said that entity A is devoid of B, or empty of B. That is the emptiness or *suñyāta*.
- For example, if we take a water bottle and pour the water out, we say we have an empty bottle. But in reality, there is air in the bottle, so the bottle is empty only with regard to water; it is not empty with regard to air.
- Emptiness is relative. One has to say what it is empty of. There is no absolute “emptiness”. It is meaningless to say “this is emptiness”, because there may be something there that we are not aware of.
- For example, up until recently, scientists thought deep space is “empty”. But now they know that it is full energy. Still, one could say that “deep space is empty of tangible matter” to a good approximation.

3. The Buddha said when the mind becomes empty of greed (*rāga*), hate (*dosa*), and ignorance (*moha*) it becomes empty of those defilements: “*ragakkhayo Nibbanan, dosakkhayao Nibbanan, mohakkhayo Nibbanan,*” and that mind has attained *Nibbāna*. That is emptiness, *suñyāta* with respect to defilements, and also with respect to anything material in this world of 31 realms; see below. VERY SIMPLE explanation, even though it is not easy to get there.

- When one attains the *Arahant phala*, one’s mind becomes *suñya* of *rāga*, *dosa*, and *moha*. But one still has *saññā* (perception), *vedanā* (feelings), etc. and lives like a normal human being until death.
- But his/her mind is devoid of greed, hate, and ignorance so that he/she will not do any immoral act, under any circumstance.
- At the death of an *Arahant*, “this world of 31 realms” becomes devoid of any trace of that lifestream, except for the *Arahant’s nāma gotta* (*mano* imprints or memory records, for previous lives; see, “[Difference Between Dhamma and Saṅkhāra \(Sankata\)](#)”); there is no rebirth. So that is another *suñyāta*.

4. There is a *sutta* in *Tipiṭaka* that is about *suñyatā* (emptiness), and was delivered by the Buddha, called the *Cula-Suññāta sutta*. I actually wrote the original post before I knew about this *sutta*. When a friend of mine told me about the *sutta*, I was glad to see that the *sutta* described emptiness very similar to the way I described it above. This does show that the Dhamma is internally self-consistent.

- Please click the link below for its translation that I extracted from, [WebLink: ACCESSTOINSIGHT: Cula-suññāta Sutta: The Lesser Discourse on Emptiness](#). Normally, I come across many English translations that are bad and even erroneous, but fortunately, this translation is fairly good.

The highlighting in the link below is mine, and I have made some comments:

[WebLink: Cula-Suññāta Sutta](#)

There is no need to write books on emptiness that are full of meaningless words. The above *sutta* says it all.

5. In an online discussion forum in 2014, I saw a comment saying that emptiness describes *Paṭicca Samuppāda*. This was really a surprise because in Mahāyāna texts it is not explained what *Paṭicca Samuppāda* is.

- I have not seen the *Paṭicca Samuppāda* explained in even a remotely sensible way in a Mahāyāna text, Zen, Vajrayana, or any other form. If you know of such a book, please send me a comment giving the name of the book (or any other source), and I would appreciate it.

6. Anything in this world of 31 realms arise due to *avijjā* (ignorance of the real nature of that world): This is the step, “*bhava paccayā jātī*” in *Paṭicca Samuppāda*. See the [Paṭicca Samuppāda](#) section for details.

- When *avijjā* is dispelled through the removal of greed, hate, and ignorance via comprehending Dhamma, NOTHING in this material world can arise, because it all starts with “*avijjā paccayā saṅkhāra*,” i.e., via thinking, speaking, and doing things with *avijjā*.
- At *Arahanthood*, even the slightest bondage to anything material in the 31 realms is discarded, and all causes for anything material (which is the cause of suffering at a deeper level) to arise. This is real emptiness or *Nibbāna*. Also see, “[What Are Rūpa? \(Relation to Nibbāna\)](#).”

7. “*Yo paticcasamuppadam passati, so Dhammam passati*” or, “One who understands *Paṭicca Samuppāda*, understands Dhamma”

- The Mahāyāna sects have moved so far away from the Buddha Dhamma, I cannot fathom why they still call it Buddha's Dhamma.
- It is very easy to get the idea behind *Paṭicca Samuppāda* because it is in the words; see, “[Paṭicca Samuppāda – “Pati+ichcha”+“Sama+uppada”](#),” and follow-up posts. Buddha Dhamma is all about cause and effects, and that is what is described in *Paṭicca Samuppāda*.

8. There is a deeper way to analyze *Suññata*. However, one needs to know the meanings of the Three Characteristics of Nature (*Tilakkhaṇa* or *anicca, dukkha, anatta*) first. It is not possible to attain *Nibbāna* without knowing *Tilakkhaṇa* or the real nature of this world; see, “[Anicca, Dukkha, Anatta](#).”

- One can get to *Nibbāna* (also called *vimokkha*) via contemplating on *anicca, dukkha*, or *anatta* (of course they are inter-related). Contemplation of *anicca* leads to *animitta vimokkha*. Contemplation of *dukkha* leads to *appaṇihita vimokkha*. Contemplation of *anatta* leads to *suññata vimokkha*. [*vimokkha* : (m.) liberation, deliverance; release; emancipation.] [The 3 liberations are: 1. the conditionless (or signless) liberation (*animitta-vimokkha*), 2. the desireless liberation (*appaṇihita-vimokkha*), 3. the emptiness (or voidless) liberation (*suññatā-vimokkha*).]
- However, regardless of the path taken, the end result is the same: one gets to *Nibbāna*, release (or freedom) from this world.

9. Finally, at the very basic level, *Nibbāna* means getting rid of greed, hate, and ignorance. That REQUIRES comprehension of *anicca, dukkha, anatta*, or the real nature of this world.

- Put in a different way, greed, hate, and ignorance need to be removed via *Ānāpāna* and *Satipaṭṭhāna* meditations; see, “[Satipaṭṭhāna Sutta – Structure](#).” But those meditations need to be done with the comprehension of *anicca, dukkha*, and *anatta*.
- More details on the correct versions of those meditations can be found at: “[Bhāvanā \(Meditation\)](#)” and “[Maha Satipaṭṭhāna Sutta](#).”

Next, “[Incorrect Theravāda Interpretations – Historical Timeline](#)”,

14.12 **Incorrect Theravada Interpretations – Historical Timeline**

April 29, 2017; revised December 8, 2021

1. Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 1500 years. Still, two drastic changes took place during that time: (i) Buddhaghosa's introduction of Hindu meditation techniques 1500 years ago, (ii) misinterpretation of *anicca* and *anatta* by the European scholars when they translated both *Tipiṭaka* and *Visuddhimagga* to English in the late 1800's.

- In several posts in this section, I will provide evidence for the above (see bullet #7 below).
- I will discuss the historical timeline in this post, which is critical to the discussion. I have combined two previous posts, "Theravada: Problems with Current Interpretations of Key Concepts" and "Historical Timelines of Buddha Dhamma and Sri Lanka – End of Sinhala Commentaries" (and removed them) to come with this more concise post.
- As I explained in earlier posts in this section, much worse distortions to Buddha Dhamma were branching out of various sects based on Mahāyāna, Zen, and Tibetan (*Vajrayāna*). It started with the rise of Mahāyāna in India about 500 years after the Buddha. Here we are focusing only on **Theravāda Buddha Dhamma**.

2. Here we look at the timeline of Theravāda Buddha Dhamma from the beginning, and see whether we can discern when the pure Dhamma started going underground. There are a few historical facts that most people agree on.

(BCE = Before Current Era, CE = Current Era = AD):

- **563 – 483 BCE:** Buddha Gotama
- **377-307 BCE:** The city of Anuradhapura, Sri Lanka, was established by King Pandukabhaya. But there is evidence that human colonization in Sri Lanka goes back to at least 30,000 years; see the detailed article on Sri Lanka on Wikipedia : [WebLink: Wikipedia: History of Sri Lanka](#)
- **247 BCE:** Buddha Dhamma was introduced to the Sinhala Kingdom in Anuradhapura, Sri Lanka by Ven. Mahinda Thero.
- **161-137 BCE:** For the first time in history, King Dutugemunu united all of Sri Lanka under one kingdom.
- **29 BCE:** *Tipiṭaka* (the version recited at the Third Buddhist Council —*Dhamma Sangayana* — around 247 BCE), was written down in Sri Lanka at the Fourth *Sangayana*, which was the last *Sangayana* attended by all *Arahants*. This is the Pāli *Tipiṭaka* that has survived to this date.
- **100-200 CE:** Ven. Maliyadeva, the Last *Arahant* by some accounts, lived in Sri Lanka : [WebLink: Wikipedia: Maliyadeva](#) (However, it is likely that there have been "*jāti Sotāpannas*" who attained *Arahanthood* since then but may not be that many).
- **100 BCE:** It is likely that Mahāyāna Buddhism originated when the earliest Mahāyāna sūtras to include the very first versions of the *Prajñāpāramitā* series, along with texts concerning *Akṣobhya* Buddha, probably written in the 1st century BCE in the south of India : [WebLink: Wikipedia: Mahāyāna](#)
- **150-250 CE:** Life of Nagarjuna; considered the founder of Mahāyāna Buddhism. Nagarjuna's central concept was the "emptiness" (*śūnyata*) of all *dharmas*. The most influential work is *Mūlamadhyamakakārikā* (Fundamental verses on the middle way).

2. It is clear that the Pāli *Tipiṭaka* that we have today has the Buddha's original teachings since *Arahants* wrote it down. However, Buddha Dhamma started to decline within 100-200 after being written down.

- Still, there was no significant impact on *Theravāda* Buddhism up to the writing of *Visuddhimagga* by Buddhaghosa around 450 CE.
- The other major work that influenced *Theravāda* teachings to date was *Abhidhammattha Sangaha* by *Acariya* Anuruddha, who was there around the same time as *Acariya* Buddhaghosa. However, since not

many people are knowledgeable in Abhidhamma, it has not impacted *Theravāda* to the same extent as *Visuddhimagga*.

- By this time, a critical had already taken place. The *Mahāyāna* influence had successfully introduced two new words to the Sinhala language: අනිත්ය(*aniyta*) and අනත්ම(*anātma*.) Those two words replaced the Sinhala words අනිච්ඡ(*anicca*) and අනත්ත(*anatta*); see #4 below. It is critical to note that many Pāli words Like *saṅkhāra* and *viññāṇa* do not have separate Sinhala words, i.e., the exact words (සංඛාර and විඤ්ඤාන) appear in the Sinhala language.
- Another critical development took place much later, in the late 1800s, when early European scholars started translating the *Tipiṭaka* to English. That was when the key Pāli terms *anicca* and *anatta* were incorrectly translated as impermanence and “no-self.” By that time, even in *Theravada*, *anicca*, and *anatta* had been established to be the same as Sanskrit words *aniyta* and *anātma*.

3. To first discuss the influence of Buddhaghosa, let us look at the timeline of events that led to his visit to Sri Lanka roughly 950 years after the *Parinibbāna* of the Buddha. Here is a timeline compiled by *Bhikkhu Nyanamoli*, taken from his introduction to [Ref. 1](#) (see the references below).

King Devanampiyatissa (307-276 BCE):

- The arrival of Ven. Mahinda in Anuradhapura and establishing Dhamma in the kingdom of King Devanampiyatissa.
- *Mahāvihāra* monastery founded by Ven. Mahinda.

King Vattagamini (104-88 BCE):

- Abhayagiri monastery was founded by the King and became separate from the Mahāvihāra monastery.
- Sensing insecurity, Mahāvihāra monastery writes down *Tipiṭaka* (away from the royal capital).

King Bhatikabhaya (20 BCE-9 CE):

- Public disputes started to break out between Abhayagiri and Mahāvihāra monasteries.

King Vasabha (66-110 CE):

- Sinhala commentaries on *Tipiṭaka* ended being recorded at any time after his reign.

King Voharika-Tissa (215-237 CE):

- King supports both Mahāvihāra and Abhayagiri monasteries.
- Abhayagiri adopts Vetulya (Mahāyāna?) *piṭaka*.
- King suppresses Vetulya doctrines.

King Gothabhaya (254-267 CE):

- King supports Mahāvihāra monastery.
- 60 bhikkhus in Abhayagiri were banished by King for upholding Vetulya doctrines.
- Indian Bhikkhu Sangamitta supports Abhayagiri monastery.

King Jettha-Tissa (267-277 CE):

- King favors Mahāvihāra monastery; Sangamitta flees to India.

King Mahasena (277-304 CE):

- King supports Sangamitta, who returns from India.
- Persecution of Mahāvihāra by King; its Bhikkhus are driven from the capital for 9 years.
- Mahāvihāra (with its libraries of seven stories) burnt to the ground.

- Sangamitta assassinated.
- Rebuilding of Mahāvihāra.

King Sri Meghavanna (304-332 CE):

- King favors Mahāvihāra.
- Sinhala monastery was established at Buddha Gaya in India.

King Jettha-Tissa II (332-334 CE):

- Dipavamsa composed.
- Some of Buddhadatta Thera's works.

King Mahanama (412-434 CE):

- Buddhaghosa arrives in Sri Lanka and composes *Visuddhimagga* and other works.

4. I really recommend reading the Introduction to the English translation of *Visuddhimagga* by Ven. Nyanamoli ([Ref. 1](#)). To quote Ven. Nyanamoli (starting on p. xxvii of [Ref. 1](#)):

“...Now by about the end of first century B.C. E. (dates are very vague), with Sanskrit Buddhist literature just launching out upon its long era of magnificence, Sanskrit was on its way to becoming a language of international culture. In Ceylon the Great monastery (Mahāvihāra), already committed by tradition to orthodoxy based on Pāli, had been confirmed in that attitude by the schism of its rival, which now began publicly to study the new ideas from India.In the first century C.E., Sanskrit Buddhism (“Hinayana”, and perhaps by then Mahāyāna) was growing rapidly and spreading abroad. The Abhayagiri monastery would naturally have been busy studying and advocating some of these weighty developments while the Mahāvihāra has nothing new to offer.King Vasabha's reign (66-110 CE) seems to be the last mentioned in the Commentaries as we have them now, from which it may lie dormant, nothing further being added. Perhaps the Mahāvihāra, now living only on its past, was itself getting infected with heresies.in King Mahasena's reign (277-304 CE) things came to a head. With the persecution of Mahāvihāra with royal assent and the expulsion of its *bhikkhus* from the capital, the Abhayagiri monastery enjoyed nine years of triumph. But the ancient institution rallied its supporters in the Southern provinces and the king repented. The *bhikkhus* returned and the king restored the buildings, which had been stripped to adorn the rival”.

“Still, the Mahāvihāra must have foreseen, after this affair, that unless it could successfully compete with the “modern” Sanskrit in the field of international Buddhist culture by cultivating Pāli at home and abroad it could assure its position at home. **It was a revolutionary project, involving the displacement of Sinhala by Pāli as the language for the study and discussion of Buddhist teachings, and the founding of a school of Pāli literary composition.**It is not known what was the first original Pāli composition in this period; but the *Dipavamsa* (dealing with historical evidence) belongs here (for it ends with Mahasena's reign and is quoted in the *Samantapasadika*, and quite possibly the *Vimuttimaggā* (dealing with practice), was another early attempt by the Mahāvihāra in this period (4th century) to reassert its supremacy through original Pāli literary composition”.

5. Here is another account of the destruction of the original Mahāvihāra during the reign of King Mahasena (277-304 CE) from [Ref. 2](#) (p. 46): “..the Mahā-Vihāra, the Brazen Palace, and all such religious edifices, built by generosity of devout kings and pious noblemen for the use of the orthodox Saṅgha, were razed to the ground. Some three hundred and sixty-four colleges and great temples were uprooted and destroyed, says an ancient chronicle (Nikāya-Sangraha, p.14), ...”

6. **Thus it is clear that the historical tradition of compiling Sinhala commentaries (on *Tipiṭaka*) was abandoned somewhere in the 4th century or even before that**, and many of the original Sinhala *Atthakatha* could have been burnt when the original Mahāvihāra was burned. A concerted effort was initiated by the Mahāvihāra to compile literature in the Pāli language to counter the onslaught by Sanskrit

Mahāyāna literature in India that was benefiting the Abhayagiri monastery. The appearance of Buddhaghosa on the scene in the early fifth century accelerated this effort to compile Pāli literature.

- More details can be found in the *Mahāvamsa*, the Pāli historical account of the history of Sri Lanka compiled in the 5th century ([Ref. 3](#)).
- **However, most accounts in the *Mahāvamsa* — especially regarding the history of Sri Lanka — are not correct.** I will write a post on this issue later.
- However, since *Mahāvamsa* was written around the time of Buddhaghosa, it is possible that accounts about Buddhaghosa may be correct.

7. In the next two posts, “[Buddhaghosa and Visuddhimagga – Historical Background](#)” and “[Buddhaghosa's Visuddhimagga – A Focused Analysis](#),” I will discuss the events leading to Buddhaghosa's writing of *Visuddhimagga*, and how it introduced the **first major contamination** of Buddha Dhamma by incorporating Hindu *vedic* meditations — breath meditation and *kaṣiṇa* meditation.

The second major contamination — which has been even more damaging — was the incorrect translation of *anicca* and *anatta* as impermanence and “no-self”. This is discussed in the last two posts: “[Background on the Current Revival of Buddha Dhamma](#)” and “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”

14.13 Buddhaghosa and Visuddhimagga – Historical Background

April 8, 2017; Revised April 29, 2017; August 28, 2022

1. *Ācariya* Buddhaghosa has strongly influenced *Theravāda* Buddhism for the past 1500 years. Before examining his commentaries — especially the *Visuddhimagga* (Path of Purification) —, we will discuss some significant events before his time and why he came to Sri Lanka to compose those commentaries. [*ācariya* : [m.] teacher.]

- The historical time-lines up to the arrival of Buddhaghosa in Sri Lanka are given in the previous post in this section: “[Incorrect Theravāda Interpretations – Historical Timeline](#).”
- I have used material from the three references below to create this post.

2. First, we note that only *Arahants* participated in the first four Buddhist Councils (*Sangāyanā*), and the fourth one was held at the Aluvihāra Monastery (a rock temple) near present-day Mātale in the Central Province of Sri Lanka in 29 BCE; see, “[Preservation of the Dhamma](#).”

- The *Tipiṭaka* was **written down fully** (as it exists today) for the first time in this fourth *Sangāyanā* in Pāli with Sinhala script (**Pāli does not have its alphabet**).
- So, it is important to keep three things in mind: (i) Genuine *Dhamma* existed in 29 BCE with *Arahants* also completing the *Abhidhamma Piṭaka*, (ii) What we have in the *Tipiṭaka* today is this version, and therefore we can have confidence that the true teachings of the Buddha are in the *Tipiṭaka*, (iii) *Tipiṭaka* was written down in Pāli with Sinhala alphabet.

3. Secondly, many parts of the *Tipiṭaka* are in a condensed form, as discussed in “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).” Today, there is a tendency to translate *Tipiṭaka suttā* word-by-word, which has led to significant confusion and many contradictions, as discussed in that post.

- **Starting at the time of the Buddha, commentaries were composed to expand and explain the key concepts in a condensed form designed for easy oral transmission.** We must remember that the *Tipiṭaka* was not written down for around 500 years after the *Parinibbāna* of the Buddha. **During that whole time, it survived only because it was in a designed form for ease of remembering; thus, many details were omitted.**
- For example, Buddha’s first discourse, “[WebLink: suttacentral: Dhammacakkappavattana Sutta \(SN 56.11\)](#),” took many hours to deliver, but the *sutta* was condensed to just a few pages of verse. It is impossible to condense all that information in a *sutta* for mostly oral transmission that was available at the time. **In those early days, *Bhikkhus* explained the details when they delivered *desanā* or discourses to the public.**
- **Therefore, in addition to the *Tipiṭaka* being orally transmitted through generations, the details were also orally transmitted.** However, when Buddha *Dhamma* started declining around 100-200 CE, those details stopped being transmitted (there were not enough *Ariyā*, or those who attained *magga phala*, to pass down correct explanations). Of course, the easy-to-memorize verses of the *Tipiṭaka* were faithfully transmitted.
- That last bullet explains a key problem that we have today. Even though the *Tipiṭaka* remains intact, there have not been many *Ariyā* within the past hundreds of years to explain the key concepts in the *Tipiṭaka*; but thanks to late Waharaka Thero, that has changed; see, “[Parinibbāna of Waharaka Thero](#).”

4. **Even though a few commentaries were composed in the time of the Buddha in Pāli (we have three in the *Tipiṭaka*; see below), most of them were written later on in Sinhala (especially after the time of Ven. Mahinda) when written language became more common.**

- Up to the time of Buddhaghosa (after about 700 years from the time of Ven. Mahinda), there would have accumulated a vast number of such commentaries called Sinhala *Atthakathā*, which means “accounts of

the truth" (*attha + kathā*). However, most of those were likely destroyed when the *Mahavihara* was burned before Buddhaghosa arrived in Sri Lanka; see below.

- **Buddhaghosa's task was to translate those from Sinhala to Pali. Instead, he just made a few of his commentaries — especially the *Visuddhimagga* — where he incorporated his Vedic concepts in them; see below.**

5. As given in the timeline in the post mentioned in #1, an important event occurred before the arrival of Buddhaghosa in Sri Lanka, which led to the possible destruction of many original commentaries; this was the establishment of the *Abhayagiri Vihara* in Anuradhapura around 100 BCE. This led to the degrading of Buddha Dhamma in Sri Lanka, which was then accelerated by the writing of the *Visuddhismagga*, as we discuss below.

- Over several decades, *Abhayagiri Vihara* became a rival to the *Mahavihara*, which had been the center of religious activity since Ven. Mahinda (King Devanampiyatissa).
- The arrival of a body of monks from Pallarama in India, who belonged to the *Vajjiputta Nikāya*, apparently started this schism between the two *Vihara* (p. 29, [Ref. 3](#)). This sect descended from those who were expelled from the *Theravāda* by Ven. Moggaliputta Tissa Thero at the Third *Sangāyanā*.

6. Later, during the reign of King Voharaka Tissa (215-237 CE), *Abhayagiri Vihara* adopted the *Vaitulya Piṭaka*. It is no coincidence that by this time, *Mahāyāna* had become dominant in India.

- When the *Mahavihara* raised objections to this new development, King Voharaka Tissa appointed minister Kapila to investigate and, on his recommendation, ordered all *Vaitulya* books to be burnt.
- A key point to remember is that "Literary activity in Ceylon (Sri Lanka) declined and, it seems, fell into virtual abeyance between 150 CE and 350 CE, as will appear below" ([Ref. 1](#), p. xxiii).

7. During King Gothabhaya's reign (254-267 CE), the *Vaitulyan* heresy raised its head again, and the King took action. He not only burnt their books but branded 60 of their leaders and expelled them.

- Those expelled settled down at Kavira in South India. While they were there, a recruit by the name of Sangamitta joined them.
- One day, while bathing, Sangamitta saw the branding on the backs of the others and learned what had happened in Sri Lanka. He vowed to take revenge.

8. Sangamitta went to Sri Lanka and won the confidence of King Gothabhaya, who appointed Sangamitta to tutor his two sons.

- When King Gothabhaya died, his elder son Jettha Tissa became King, but he was not that attached to Sangamitta, so Sangamitta returned to India. When Jettha Tissa died 14 years later, the younger brother, Mahasena, became King.

9. Mahasena was very much attached to Sangamitta, and Sangamitta decided to return to Sri Lanka, realizing that his time to take revenge had come.

- On Sangamitta's advice, King Mahasena started a process of damaging the *Mahavihara* and the Buddha Dhamma in Sri Lanka. He prohibited providing alms to Mahavihara, and *bhikkhus* at *Mahavihara* migrated to other parts of the country over time.
- By this time, Buddhism in Sri Lanka was in decline due to other factors, including the rise of *Mahāyāna* in India. *Arahants* were scarce on the Island; if there were some, they would have been in remote regions.

10. For nine years, Sangamitta lived in glory, plundering the properties of Mahavihara and eventually burning down the seven story building with its libraries (p. 47 of [Ref. 3](#)). People became angry with what happened to *Mahavihara*, and a rebellion was started by a minister of the King named Meghavaranaabhaya.

- However, before a battle took place, the minister was able to meet the King and explain why he needed to make amends to the *Mahavihara* to appease the populace. The King apologized and rebuilt the *Mahavihara*.
- However, people were quite angry at Sangamitta, who was killed on the orders of a queen of the King, probably without the knowledge of the King.

11. The damage had been done. It is also said that when the King rebuilt the *Mahavihara*, it was mostly those at the *Abhayagiri* who took residence at the restored *Mahavihara*. **Therefore, when Buddhaghosa visited the *Mahavihara*, the *bhikkhus* there could have been those originally belonging to the *Abhayagiri* sect.**

- Furthermore, It is possible that many of the original Sinhala *Atthakathā* were destroyed when the *Mahavihara* was burned to the ground. Even though copies of the *Tipiṭaka* were at many different locations scattered throughout the country, it is not known how many of the *Atthakathā* had copies.
- In any case, none of those original Sinhala commentaries exist today.
- *Mahāyāna* was taking root in India and possibly contributed to the degrading of *Theravāda* in Sri Lanka as well. Sanskrit became the “language of the pundits” (with many new Sanskrit *sutras* written by Nagarjuna, Vasudeva, etc), and Pāli was losing the battle; see, “[Incorrect Theravāda Interpretations – Historical Timeline](#).”

12. By the time Buddhaghosa arrived in Sri Lanka (during the reign of King Mahanama between 412-434 CE), some of those *Atthakathā* might have still been there.

- Ven. Nyanamoli says (p. xviii of [Ref. 1](#)), “..There are references in these works (by Buddhaghosa) to “Ancients (*Porana*) or “Former Teachers (*Pubbacariya*)” as well as to several Sinhalese Commentaries additional to the three referred to in the quotation given earlier. The fact is that a complete body of commentary had been built up during the nine centuries or so that separate Bhandantacariya Buddhaghosa from the Buddha..” and “..This body of material — one may guess that its volume was enormous — Bhandantacariya Buddhaghosa set himself to edit and render into Pāli (the *Tipiṭaka* itself had been left in the original Pāli)..”
- By the way, “*Porāna*” is a Sinhala word (now *Purāna*), meaning ancient.
- The detailed explanations in those *Atthakathā* were held in high esteem among the remaining Buddhists in India. As we see below, this is where Buddhaghosa came into the picture.
- So, it appears that even though some of the Sinhala *Atthakathā* were burned with the destruction of the *Mahavihara*, some had survived in other locations and brought back to the rebuilt *Mahavihara*.

13. Buddhaghosa was born into a *vedic brahmin* family who lived close to the *Bodhi* Tree in India. He mastered the three *Vedas* and was a well-known *vedic* scholar. He was converted to Buddhism by a *Bhikkhu* Revata who lived in that region in India.

- Law (p. 6 of [Ref. 2](#)) writes that Ven. Revata told Buddhaghosa, “..The Sinhalese *Atthakatha* are genuine. They were composed in the Sinhala language by the inspired and profoundly wise Mahinda, who had previously consulted the discourse of the Buddha, authenticated at the three convocations (*Sangāyanā*), and the dissertations and arguments of Sāriputto and others, and they are extant among the Sinhalese. Repairing thither, and studying the same, translate (them) according to the rules of the grammar of the Maghadhas (Pāli). It will be an act conducive to the welfare of the whole world”. Malalasekara (p.66 of [Ref 3](#)) gives a very similar account of that request.
- Ven. Nyanamoli also gives a detailed account of how Ven. Revata recruited Buddhaghosa for the project on pp. xxxiv-xxv (Introduction) of [Ref. 1](#). Also see pp. 31-39 of [Ref. 2](#) and pp. 64-69 of [Ref. 3](#).

14. The important position assigned in the *Theravāda* tradition to the work of Buddhaghosa is evident from the following quote from [Ref. 1](#) (p. xli):

- “..The doctrines (*Dhamma*) of the Theravāda Pāli tradition can be conveniently traced in three main layers. (1) The first of these contains the main books of the Pāli *Sutta Piṭaka*. (2) The *Abhidhamma Piṭaka*, notably the closely related books, the *Dhammasaṅgāyāni*, *Vibhaṅga Paṭṭhāna*. (3). The system the author of the *Visuddhimagga* completed, or found completed, and he set himself to edit and translate back into Pāli ...”
- Even today, many *Theravādins* use the *Visuddhimagga* and don't bother to consult the *Tipiṭaka*.

15. Sinhala tradition assigns the arrival of Buddhaghosa in Sri Lanka 965 years after the *Parinibbāna* of the Buddha, according to Malalasekara (p. 66). This is consistent with the above timeline.

- Upon arriving at the Mahavihara in Anuradhapura, Sri Lanka, Buddhaghosa requested those *Atthakathā* from the authorities. They were initially reluctant, but after verifying that he was a scholar, they gave him access to the books (Refs. 1-3).
- Law (p. 8 of Ref 2) says, “..Taking up his residence in the secluded Ganthakaro viharo at Anuradhapura, he translated, according to the rules of the *Maghdhas*, **which is the root of all languages**, the whole of the Sinhalese *Atthakathā* (into Pāli)”.

16. This assertion that Buddhaghosa “**translated** Sinhalese *Atthakathā* into Pāli” is incorrect.

- He incorporated many of his *vedic* concepts (breath meditation, *kaṣiṇa* meditation, etc) and made his commentaries, as I will discuss in the next post.
- The obvious inconsistencies of the *Visuddhimagga* with the *Tipiṭaka* and the remaining three original Pāli commentaries (still in the *Tipiṭaka*) are discussed in “[Buddhaghosa's Visuddhimagga – A Focused Analysis](#).”

17. Law makes the following interesting statement (p. 38 of [Ref. 2](#)): “..Buddhaghosa's task of translating was finished in three months. Having observed the *Pavarana*, he informed the congregation's chief of completing his task. **The Samgharaja praised him much and set fire to all the works written by Mahinda in Sinhalese...**” We can make two observations:

- If the work was completed in three months, as Law says, Buddhaghosa did not even have time to go through the whole of the Sinhalese *Atthakathā*, even if only a part of it was left.
- It is hard to believe that the chief *Bhikkhu* set fire to the original books. However, ALL those Sinhalese *Atthakathā* were indeed lost after the Buddhaghosa.

18. In the next post in this section, “[Buddhaghosa's Visuddhimagga – A Focused Analysis](#),” I discuss why *Visuddhimagga* does not represent Buddha Dhamma.

- However, as we discussed above, all of the Sinhala *Atthakathā* were lost soon after the publication of *Visuddhimagga*, and *Visuddhimagga* became the sole source for explaining *Tipiṭaka* material.
- It became customary just to use the *Visuddhimagga* and not even consult the *Tipiṭaka* until recent times, especially until the “discovery of Buddhism” by the Europeans who started translating the *Tipiṭaka* and Buddhaghosa's works. See the details in the “[Historical Background](#)” section.

19. Furthermore, When Europeans started translating the *Tipiṭaka* (starting with Rhys Davis and others), they translated *suttā* word-by-word to English, a practice that continues today.

- However, It is not a good idea to translate Pāli *suttā* word-by-word, and those early commentaries were critically important to expand on the *Tipiṭaka* material. This is discussed in “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).”
- In addition, those early European scholars made a huge mistake by incorrectly translating the Pāli words *anicca* and *anatta* as impermanent and “not-self”; see, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”

- This is why the work of the late Waharaka Thero is so important. He was able to “re-discover” the meanings of the key Pāli words by perusing the remaining three original Pāli commentaries of *Patisambhidamagga*, *Petakopadesa*, and *Nettippakarana*; see “[Preservation of the Dhamma](#).”

14.14 **Buddhaghosa's Visuddhimagga – A Focused Analysis**

April 29, 2017; revised March 16, 2021; major revision September 3, 2021

Two Major Distortions to Buddha Dhamma

1. The first distortion occurred about 1500 years ago with the introduction of “breath meditation” as the Buddhist *Anāpānasati* meditation by Buddhaghosa in his commentary *Visuddhimagga*.

- The second significant distortion took place more recently by European scholars by an honest mistake. They were unable to distinguish between Sanskrit-based Mahayana Buddhism and Pali-based Theravada Buddha Dhamma. That led to the mistranslation of *anicca* as impermanence and *anatta* as “no-self.”
- We will discuss the background to the first issue in this post.
- An introduction to the second issue is in the post, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”

Historical Background on Buddhaghosa

2. In the previous post in this series, “[Buddhaghosa and Visuddhimagga – Historical Background](#),” we discussed why Buddhaghosa traveled to Sri Lanka. Here is a summary of that post:

- Many parts of the *Tiṭṭaka* are in condensed form. Starting from the Buddha's time, commentaries were written to expand and explain the key concepts in the *Tiṭṭaka*.
- Most of those commentaries — at least from the time of Ven. Mahinda — was written in the Sinhala language by Ven. Mahinda himself and many Sinhalese *Arahants* for over 950 years up to the time of Buddhaghosa. These were called Sinhala *Atthakathā* (true accounts).
- A certain *bhikkhu* by the name of Ven. Revata in India recruited Buddhaghosa to travel to Sri Lanka and translate those Sinhala *Atthakathā* to Pāli (see Refs. 2-4 ([Ref. 2](#), [Ref. 3](#), and [Ref. 4](#)) below).
- In this post, I will point out that instead of translating those Sinhala *Atthakathā*, Buddhaghosa incorporated his own *vedic* ideas into his commentaries in Pāli, especially describing *Anāpānasati* as breath meditation.

Demise of Sinhala *Atthakathā* (Original Commentaries in Sinhala)

3. Those Sinhalese *Atthakathā* disappeared from existence not long after Buddhaghosa completed his work (most of them were likely burnt with the *Mahavihara* well before Buddhaghosa's time). Regardless of what happened to those original *Atthakathā*, *Theravāda* tradition accepted *Visuddhimagga* to represent those original *Atthakathā* as well as the *Tiṭṭaka*. To date *Visuddhimagga* is regarded in high esteem.

- When he edited those Sinhala *Atthakathā* and composed the *Visuddhimagga*, Buddhaghosa, a scholar in *Vedic* literature, incorporated Hindu *Vedic* concepts to the *Visuddhimagga*.
- In particular, he replaced real Buddhist *Anāpāna Bhāvanā* with breath meditation and also introduced Hindu *kaśīna* meditation.
- **Buddhaghosa also disregarded the importance of the *Tilakkhaṇa* (*anicca, dukkha, anatta*), but I will show evidence that he never distorted their meanings.** That happened only when the Europeans translated the *Tiṭṭaka* and the *Visuddhimagga* to English; see, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”
- He also reportedly wrote other commentaries on *Tiṭṭaka*, but they are not widely used.
- I guess that Buddhaghosa did not consult the Sinhala *Atthakathā* even for the *Visuddhimagga*. Certainly, *Visuddhimagga* is not compatible with the remaining original three commentaries and the *Tiṭṭaka* regarding meditation techniques.

Final Buddhist Council Attended by *Arahants*

4. As I discussed in the post, “[Buddhaghosa and Visuddhimagga – Historical Background](#),” pure Dhamma existed until the fourth Buddhist Council (*Sangāyanā*) held in 29 BCE in Matala, Sri Lanka.

- By the time Buddhaghosa arrived in Sri Lanka roughly 450 years later, drastic changes had taken place (with the Buddhist center of Anuradhapura *Mahā Vihara* burnt down once) and a Mahayanist sect the landscape for a while; see the above post among other things.
- So, the degradation of Theravāda Buddha Dhamma occurred gradually over two thousand years. Still, two drastic changes took place during that time: (i) Buddhaghosa’s introduction of Hindu meditation techniques in the fifth century, (ii) misinterpretation of *anicca* and *anatta* by the European scholars when they translated both *Tipiṭaka* and *Visuddhimagga* to English in the late 1800s.
- Even though there was a resurgence of Buddha Dhamma since the late 1800s due to those Europeans’ efforts like Rhys Davids, Eugene Burnouf, and Thomas Huxley, unfortunately, it was this “distorted Dhamma” was what spread throughout the world in the past 200 years.

Three Original Commentaries in Pāli

5. Even though those old Sinhala commentaries were lost, three commentaries composed in Pāli (*Paṭisambhidāmagga*, *Petaḥkopadesa*, and *Nettipakaraṇa*) at the time of the Buddha remained intact with the *Tipiṭaka*; see, “[Preservation of the Dhamma](#).”

- After Buddhaghosa composed *Visuddhimagga*, *Theravādins* almost exclusively used *Visuddhimagga* instead of the *Tipiṭaka*, and those original Pāli commentaries were totally neglected.
- With the help of those three original Pāli commentaries, Waharaka Thero was able to “re-discover” the Buddha’s original teachings over the past 25 years or so. Unfortunately, Waharaka Thero attained *Parinibbāna* recently; see, “[Parinibbāna of Waharaka Thero](#).”
- After the “re-discovery” of the Buddha’s true teachings by Waharaka Thero over the past 25 years or so, it became clear that several key misinterpretations crept into Buddha Dhamma over the past two thousand years. But the actual timeline of contamination was not clear.
- For example, it was not clear whether Buddhaghosa himself was responsible for *anicca* and *anatta*’s misinterpretations. In this post, I will show that Buddhaghosa was not responsible for that part. In the post, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#),” I presented evidence that it was done by the European pioneers when they assumed that the Pāli words *anicca* and *anatta* were derived from *anitya* and *anathma* in Sanskrit.

Buddhaghosa Not Responsible for Misinterpretation of *Anicca* and *Anatta*

6. First, I will show evidence that Buddhaghosa did not distort the meanings of the words *anicca* and *anatta*, even though he did not realize the importance of the *Tilakkhaṇa*.

- We need to remember that Buddhaghosa was supposed to take material from Sinhala *Atthakathā* and compose his own commentary, *Visuddhimagga*, in Pāli. One can purchase that original Pāli version, [Ref. 1](#) below, from Amazon.
- When comparing the Pāli and English texts below, I will be using [Ref. 2](#).

7. On p. 271 of the Pāli *Visuddhimagga* ([Ref. 1](#)), for example, it says, “*Catutthacatukke pana aniccānupassi ettha tava aniccata veditabbaṃ. Aniccata veditabba. Aniccānupassanā veditabba. Aniccānupassi veditabbo.*”

- This is translated in the book by *Bhikkhu* Nyanamoli (p. 282, vol. I) as, “But in the fourth tetrad, as to contemplating *impermanence*, here; firstly, the *impermanent* should be understood, and *impermanence*, and the contemplation of *impermanence*, and one contemplating *impermanence*.”
- So, in this case, Buddhaghosa used the correct Pāli words, *anicca*. Still, *Bhikkhu* Nyanamoli incorrectly translated it as “impermanence” following the European pioneers’ misinterpretation before him, as we discussed above.

8. Buddhaghosa’s original Pāli version also states the relations among the three characteristics, as I discussed in the post, “[Anicca, Dukkha, Anatta – Wrong Interpretations](#).” On p. 617 of [Ref. 1](#), “*Yadaniccaṃ taṃ dukkhaṃ*”*ti* (SN 3.15) *vacanato pana tadeva khandhapancakam dukkham. Kasmā? Abhiñhapatipīḷana, abhinhapatipīḷanā kāro dukkhalakkhaṇam.*” AND

“*Yaṃ dukkhaṃ tadanattā*”*ti* (SN 3.15) *vacanato pana tadeva khandhapancakam anattā. Kasmā? Avasavattanato, avasavattanā kāro anattalakkhaṇam.*”

- This really means, “*dukkha* arises (based on attachments to things of) *anicca* nature, therefore (such attachments are of) *anatta* nature,” as I explained in my post too.

Incorrect Translation by *Bhikkhu* Nynamoli

9. However, *Bhikkhu* Nynamoli, following the incorrect interpretation by the early European pioneers in the 1800’s, translates those two verses as (p.663 of [Ref. 2](#)): “Those same five aggregates are painful because of the words, ‘**What is impermanent is painful**’ (S. iii,22). Why? Because of continuous oppression. The mode of being continuously oppressed is the characteristic of pain.”, AND

“Those same five aggregates are not-self because of the words, ‘**What is painful is not-self**’ (S. iii,22). Why? Because there is no exercising of power over them. The mode of insusceptibility to the exercise of power is the characteristic of not-self.”

10. Thus, it is obvious that it was not the Buddhaghosa who interpreted *anicca* as impermanent and *anatta* as not-self, but those early Europeans in the late 1800s. As explained in those previous posts, subsequent scholars from Sri Lanka and other Asian countries propagated those two incorrect interpretations.

- For example, early Sinhala scholars like Malalasekara, Jayatilaka, and Kalupahana, learned Buddhism (and received Doctoral degrees in Buddhism!) from those European pioneers at universities in the United Kingdom.
- One needs to contemplate on how the authority of those early Europeans on Buddha Dhamma. As explained in those other posts, they merely translated the *Tiṭṭaka* word-by-word (using perceived etymologies to Sanskrit).
- We must realize that translating *Tiṭṭaka* is not the same as translating any other book from one language to another. One has to have a deep background in Buddha Dhamma to do that.
- The key mistake made by Rhys Davids, Bernouf, and others, was to assume that Pāli *anicca* and *anatta* are the same as Sanskrit *anitya* (which does mean impermanence) and *anathma* (which does mean no-self).

Buddhaghosa Introduced Breath Meditation as *Ānāpānasati*

11. Now we turn to the issue of Biddhaghosa introducing Hindu *Vedic* meditation techniques to Buddha Dhamma in his *Visuddhimagga*.

Here is a key passage from Buddhaghosa’s original Pāli *Visuddhimagga* (p. 254 [p. 274] of [Ref. 1](#)): “*Tattha dīghaṃ vā assasantoti dīghaṃ vā assāsaṃ pavattayanto, assāsoti bāhi nikkhamanavāto, passāsoti anto pavisanavātoti vinayaṭṭhakathāyaṃ vuttaṃ. Suttantaṭṭhakathāsu pana uppaṭipāṭiyā āgataṃ. Tattha sabbesampi gabbhaseyyakānaṃ mātukucchito nikkhamanakāle paṭhamam*

abbhantara vāto bahinikkhamati, pacchā bāhiravāto sukhumarajam gahetvā abbhantaram pavisanto tālum āhacca nibbāyati, evaṃ tāva assāsapassāsā veditabbā.”

Bhikkhu Nyanamoli CORRECTLY translates this passage to English as follows (p. 265 of Ref. 2): “Herein, breathing in long (*assasanto*) is producing a long in-breath. ‘**assāsa is the wind issuing out; passāsā is the wind entering in**’ is said in the *Vinaya* Commentary. But in the *Suttanta* Commentaries, it is given in the opposite sense. Herein, when an infant comes out from the mother’s womb, first the wind from within goes out, and subsequently, the wind from without enters in with fine dust strikes the palate and is extinguished [with the infant’s sneezing]. This, firstly, is how *assāsa* and *passāsā* should be understood”.

- So, above is concrete evidence that Buddhaghosa himself referred to *Ānāpānasati* as breath meditation. He specifically talked about inhaling and exhaling air.
- However, actual Buddhist *Ānāpāna Bhāvanā* is not breath meditation; see, “[7. What is Ānāpāna?](#).”

Buddhist Meditations Do Not Use *Kasiṇa* Objects

12. The second problem that Buddhaghosa introduced in his *Visuddhimagga* was to present mundane *kasiṇa* meditation as a viable path to *Nibbāna*. He gives detailed explanations on making *kasiṇa* objects in chapters 4 and 5 in [Ref. 1](#).

- For example, he goes to minute details describing how to make an “earth *kasiṇa*” starting on. 118 [p 124] of [Ref. 1](#): “..*Nīlapītalohitodātasambhedavasena hi cattāro paṭhavikasiṇadosā, tasmā nīlādivaṇṇam mattikaṃ agahetvā gaṅgāvahe mattikāsadisāya aruṇavaṇṇāya mattikāya kasiṇam kātabbam,..*”.
- **Bhikkhu Nyanamoli translates (p. 123 of Ref. 2):** “..Now the four fruits of the earth *kasiṇa* are due to the intrusion of blue, yellow, red, or white. So instead of using clay of such colors, he should make the *kasiṇa* of clay like that in the stream of Ganga, which is the color of the dawn...”
- In the same way, Buddhaghosa goes into great detail to describe how to make other types of *kasiṇa* objects.

13. **The critical point is that true Buddhist *kasiṇa* meditation does not involve any physical *kasiṇa* objects.** If anyone can find a reference in the *Tipiṭaka* where it is described how to make a physical *kasiṇa* object, I would appreciate receiving that reference.

- The Buddha describe the true Buddhist *kasiṇa* meditation to Ven. Rahula in the [WebLink: suttacentral: Mahā Rahulovada Sutta \(MN 62\)](#) (*Majjhima Nikāya*, MN 62). It was explained to him as a part of *Ānāpānasati Bhāvanā*, which can be done in many ways, but here by contemplating on internal body parts made of *cattāro mahā bhūta* and realizing that external objects are also made with the same *cattāro mahā bhūta*. Furthermore, that means nothing can be considered in one’s body as. “me, myself, etc..”

“..*Ekāmantam nisinno kho āyasmā rāhulo bhagavantam etadavoca: “katham bhāvitā nu kho, bhante, ānāpānassati, katham bahulīkatā mahapphalā hoti mahānisaṃsā”ti? “Yaṃ kiñci, rāhula, ajjhattam paccattam kakkhaḷam kharigatam upādinnaṃ, seyyathidaṃ—kesā lomā nakhā dantā taco maṃsaṃ nhāru aṭṭhi aṭṭhimīṇjaṃ vakkam hadayaṃ yakanam kilomakam pihakam papphāsam antam antagaṇam udariyam karisaṃ, yaṃ vā panaññampi kiñci ajjhattam paccattam kakkhaḷam kharigatam upādinnaṃ—**ayaṃ vuccati, rāhula, ajjhattikā pathavīdhātu. Ya ceva kho pana ajjhattikā pathavīdhātu yā ca bāhirā pathavīdhātu, pathavīdhāturevesā. Tam ‘netam mama, nesohamasmi, na meso attā’ti—evametam yathābhūtam sammappaññāya datṭhabbam.** Evametam yathābhūtam sammappaññāya disvā pathavīdhātuyā nibbindati, pathavīdhātuyā cittaṃ virājeti.”.*

- The other three, *āpo*, *tejo*, *vāyo* are discussed in the same way there. **One does not need to make *kasiṇa* objects for true Buddhist *kasiṇa* meditation**, and as I said there is nowhere in the *Tipiṭaka* that discusses preparing *kasiṇa* objects.

The Second Issue of Misinterpretation of *Anicca* and *Anatta*

14. In the next post, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#),” we will wrap up this section on “[Historical Background](#).” With that post, I would have summarized the historical background from the Buddha’s time to the present day. This is probably the only section that can be said to be “finished,” even though I may edit the posts in this section as needed.

14.15 Background on the Current Revival of Buddhism (Buddha Dhamma)

Revised April 29, 2017; January 27, 2020

Critical Role of the British Civil Servants

1. Ironically, the current revival of Buddhism (Buddha Dhamma) is also due to the same reason that led to the decline in Buddha Dhamma in most Buddhist countries for hundreds of years. That decline was in the latter part of the second Millennium, i.e., the colonization of Asia by the Western powers starting with the Portuguese and ending with the British.

- The civil servants of the British East India Company came across ancient Buddhist literature in various Asian countries in the 1800s. Some of them realized the importance of these documents and started deciphering the documents themselves (e.g. Thomas W. Rhys Davids, 1843-1922.) They became motivated and learned Pāli and Sanskrit languages.
- Others sent documents universities in Europe. There, mostly French and English philosophers (e.g., Eugene Burnouf, 1801-1852) studied them and translated them to French and English.
- A thorough account of the efforts by the British civil servants in India, Sri Lanka, and other Asian countries in uncovering the “lost knowledge” has been given by Charles Allen in his excellent book, “The Search for the Buddha” (2003). It also covers restoration of historical Buddhist sites in India.

Early European Scholars

2. These Westerners realized that there was something profound in this ancient doctrine which exposed them for the first time to a religion that was not based on a Creator.

- Thomas Huxley captured the essence this new religion brilliantly as follows (Thomas H. Huxley, *Evolution and Ethics and Other Essays*, 1894, pp. 68-69): “A system which knows of no God in the Western sense; which denies a soul to man; which counts the belief in immortality a blunder and the hope of it a sin; which refuses any efficacy to prayer and sacrifice; which bids men look to nothing but their own efforts for salvation; which, in its original purity, knew nothing of vows and obedience, abhorred intolerance, and never sought the aid of the secular arm; yet spread over a considerable moiety of the Old World with marvelous rapidity, and is still, with whatever base admixture of foreign superstitions, the dominant creed of a large fraction of mankind”.
- It is amazing that even at that early stage, when there must have been some confusion about the mythical aspects of especially the Tibetan and Zen Buddhist practices, Huxley was able to express the essence of Buddha Dhamma.

3. Based on their interest in the documents from Asia on Buddhism and Hinduism, Madame Helena Petrovna Blavatsky and Colonel Henry Steel Olcott founded the Theosophical Society in New York City in 1875. They subsequently traveled to India and Sri Lanka and became Buddhists.

- Olcott published “A Buddhist Catechism” in 1881. This book together with the “Light of Asia” by Edwin Arnold in 1871 (which went through 100 printings), led to much interest in Europe and America about Buddhism. Colonel Olcott opened several Buddhism-oriented schools in Sri Lanka in order to revive the religion. I was fortunate to be able to attend one of those schools.
- These efforts were subsequently augmented by a number of Sri Lankan intellectuals such as Anagarika Dharmapala, G. P. Malasekara, K. N. Jayatilleke, Narada Thera, Walpola Rahula Thera, David Kalupahana, and also by several more Westerners who were impressed by the Buddhist teachings to a point that they came to Sri Lanka, became monks, and wrote many excellent treatises on Theravāda Buddhism; these include Nyanatiloka Thera, Nyanyaponika Thera, and Bhikkhu Bodhi.

A surge of Zen Buddhism

4. Even though those early publications by Rhys Davids, Arnold, and Olcott in the late 1800s were mainly on the Theravāda Buddhism, beginning in the early part of the 1900s, Zen Buddhism became an object of fascination in the West and continues to be a significant presence in the West.

- In contrast to the earlier introduction of (Theravāda) Buddhism to the West by Westerners, Zen made its way into the Western consciousness via the efforts of an elite group of Japanese intellectuals – most notably D. T. Suzuki. Suzuki, who came to America in 1897, wrote several books including “An Introduction to Zen Buddhism”; this book emphasized the transcendent and mystical nature of Zen.

5. Here is an excerpt from the above book by Suzuki, which clearly states the belief of the Mahāyāna thinkers that the original teachings of the Buddha are “primitive” and Mahāyāna provided the needed improvements (p. 1, footnote 1):

- “..to be accurate, the fundamental ideas of the Mahāyāna expounded in the Prajnaparamita group of Buddhist literature, the earliest of which must have appeared at the latest within 300 years off the Buddha's death. The germs are no doubt in the writings belonging to the so-called primitive Buddhism. Only their development, that is, a conscious grasp of them as most essential in the teachings of the founder, could not be effected without his followers' actually living the teachings for some time through the variously changing conditions of life. **Thus enriched in experience and matured in reflection, the Indian Buddhists came to have the Mahāyāna form of Buddhism as distinguished from its primitive or original form.** In India two Mahāyāna schools are known the Madhyamika, of Nagarjuna and the Vijnaptimatra or Yogacara of Asanga and Vasubandhu. More schools developed in China: the Tendai, the Kegon, the Jodo, the Zen, etc. In Japan, we have besides these the Hokke, the Shingon, the Shin, the Ji, etc. All of these schools or sects belong to the Mahāyāna wing of Buddhism”. (Highlighting is mine).

Problems with Mahāyāna Teachings

6. This is in sharp contrast with the basic presumption in Buddha Dhamma that only a Buddha can discover the laws of nature and those teachings CANNOT be improved upon:

I have discussed key problems with Mahāyāna teachings in “[Saddharma Pundarika Sutra \(Lotus Sutra\) – A Focused Analysis](#)” and “[What is Suñyāta or Suññāta \(Emptiness\)?](#).”

- There is only ONE set of natural laws and those were discovered by the Buddha. As one goes through the content in this website, I hope one would be able to see that statement is justified. Also see, “[Dhamma and Science – Introduction](#)”

Role of Dalai Lāma

7. More recently, Tibetan Buddhism (*Vajrayāna*) has gained prominence in the West. This is no doubt the result of the publicity of the Chinese invasion of Tibet in 1953 and the incredible personal charisma of the Dalai Lāma.

- It is unfortunate that the Dalai Lāma has to state that, “My confidence in venturing into science lies in my basic belief that as in science so in Buddhism, understanding the nature of reality is pursued by means of critical investigation: **if scientific analysis were conclusively to demonstrate certain claims in Buddhism to be false, then we must accept the findings of science and abandon those claims.**”(highlighting mine) – cited from “The Universe in a Single Atom: The Convergence of Science and Spirituality” (2005).

8. Both the *Mahāyāna* and *Vajrayāna* sects are now realizing that some concepts in those forms of “Buddhism” have to change with the new findings of science. The fundamental teachings of the Buddha as stated in the Theravāda Dhamma, in contrast, remain unchallenged because no such “improvements” were incorporated to “keep up with the times and cultures”.

- The **Pāli Tipiṭaka** has remained the same since it was written down 2000 years ago. The reality is that science is only now beginning to confirm many things that the Buddha stated 2500 years ago; see, [“Dhamma and Science – Introduction”](#) and the subsequent links.
- Regrettably, the **translated and edited versions** of the *Tipiṭaka*, especially those by Acariya Buddhaghosa, have many misinterpretations.

Scientists’ Role in Recent Years

9. Beginning at the end of the twentieth century, there is a renewed interest in “Buddhism” in the West, based on several books by Western scientists.

- It seems to have started with the publication of “The Tao of Physics” by physicist Fritjof Capra (1975). In the book he describes how, one day quietly sitting by the ocean, he realized that there may be a connection between the subtleties of quantum mechanics and Eastern “mysticism,” in which he included “Hinduism, Buddhism, Chinese Thought, Taoism, and Zen.” It appears that he was trying to make a connection between the world of matter described by quantum mechanics and the “mind” that is predominant in “Eastern mysticism.” Even by the time of the 5th edition (2010), he had not realized that Zen was a branch of Buddhism, and had not been exposed to any Theravāda literature. However, the connection he was trying to establish apparently made an impact on the Western audience and this trend will hopefully continue and be directed in the right direction.
- There are others who have contributed to the recent interest in “Buddhism” in the West: “The Art of Happiness” and other books by Dalai Lāma, “The Embodies Mind” by Francisco Varela et al., “Confession of a Buddhist Atheist” and other books by Stephen Batchelor, are some examples.
- However, most these books have incorrect interpretations of Buddha Dhamma because they are heavily influenced by *Mahāyāna* Buddhism, which has totally veered away from the original teachings of the Buddha, as I have discussed in this section, [“Historical Background.”](#)

Sorting Out the True Teachings of the Buddha

10. The books that I mentioned at the beginning of the essay and several other books by Ven. Ledi Sayadaw, Ven. Bhikkhu Bodhi, Ven. Walpola Rahula, and others (see the References below), are providing the much needed material on *Theravāda* Buddhism to the Western audience, **even though they themselves use some incorrect interpretations due to two main “contamination problems”**.

- One happened 1500 years ago when Buddhaghosa distorted *Ānāpāna Bhāvanā* as “breath meditation” and also introduced Hindu *kaśīṇa* meditation to Buddha Dhamma in his commentary, *Visuddhimagga*.
- The other problem of misinterpreting *anicca* and *anatta* as impermanence and “no-self” was done by those early European scholars who translated *Tipiṭaka* to English; see, [“Why is Correct Interpretation of Anicca, Dukkha, Anatta so Important?”](#) These incorrect interpretations were adopted by the whole world since the late 1800s.
- **Therefore, all Buddhist literature published in all languages since the late 1800s have both these problems. This is a critical point, see, [“Misinterpretation of Anicca and Anatta by Early European Scholars.”](#)**
- We need to resort to the Pāli *Tipiṭaka* that still contains the original teachings of the Buddha, and it is the goal of this website to systematically present those original teachings of the Buddha.

14.16 Misinterpretation of Anicca and Anatta by Early European Scholars

April 29, 2017; revised next day (#12); revised August 14, 2018; February 3, 2020; critical revision on July 14, 2021; major revision September 6, 2021; major revision February 24, 2022; revised May 20, 2023

Introduction

1. Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 1500 years, but **two drastic distortions** took place during that time:

- i. Key Pāli words *anicca* and *anatta* had been mistranslated to give the meanings of the Sanskrit words “*anitya*” and “*anātma*” in the Asian Buddhist countries even before the Buddhaghosa’s time 1500 years ago. That happened due to *Mahāyāna*’s influence on *Theravāda* Buddhism. Those changes have taken root with the influence of the early European scholars and the printing press in the late 1800s.
- ii. Buddhaghosa introduced Hindu meditation techniques in his Commentary, *Visuddhimagga*, 1500 years ago.

2. To understand the current situation, one needs to understand the historical background in this section, “[Historical Background](#),” but at least the posts starting with “[Incorrect Theravāda Interpretations – Historical Timeline](#).”

- As I explained in earlier posts in this section, worse distortions to Buddha Dhamma occurred via branching out of various sects based on *Mahāyāna*, Zen, and Tibetan (*Vajrayāna*). It started with the rise of *Mahāyāna* in India about 500 years after the Buddha, i.e., about 2000 years ago.
- Degradation of *Theravāda* Buddha Dhamma occurred gradually over the past 2000 years. Two drastic changes took place during that time: **(i) misinterpretation of *anicca* and *anatta* as “*anitya*” and “*anātma*” due to *Mahāyāna*’s influence**, and **(ii) Buddhaghosa’s introduction of Hindu meditation techniques 1500 years ago**.
- The subsequent adoption of that by the European scholars when they translated BOTH *Tipiṭaka* and *Visuddhimagga* to English in the late 1800s made those widespread.

Background for This Discussion

3. To set up the context for the present discussion, we also need to know the following facts:

- Pāli is a “phonetic language” (sounds give meanings in most cases, especially for keywords). It comes from *Māgadhi* (*Maga Adhi* or Noble Path) language that the Buddha spoke. Attempts to develop Pāli grammar took place about 1000 years ago.
- Furthermore, Pāli does not have an alphabet. The original *Tipiṭaka*, written 2000 years ago, is in Sinhala script. Details at “[Historical Background](#).”

4. The root problem of writing a given Pāli word in English must have been a critical issue to address for those English, German, and French scholars who took on the daunting task of translating the *Tipiṭaka* in the late 1800s.

- **Now there are two separate key issues: First, the “*Tipiṭaka* English” convention was adopted in the 1800s** to preserve the Pāli sounds and keep the text short. See, “[“Tipiṭaka English” Convention Adopted by Early European Scholars – Part 1](#)” Thus the Pāli word “අත්ත” is written as “atta” instead of “aththa” as one would write in “Standard English.” This was a good step.
- **The second issue** is even more critical: **Translating of key Pāli words to English**. In this particular case, they translated the word “atta” (“අත්ත”) as “self.” That translation is incorrect, but it was also a logical step at that time as I briefly explained above.

- **Now let us see why those early translators like Rhys Davids, Eugene Burnouf, and Edward Muller chose that meaning.**

***Tipiṭaka* Had Not Been Translated Until Recently**

5. Going back to our main discussion. *Tipiṭaka* was not TRANSLATED into the Sinhala language until 2005. It has remained in the Pāli language (written with Sinhala script) since first written down in 29 BCE (2000 years ago). **The practice of translating the *suttas* in the *Tipiṭaka* WORD-FOR-WORD to other languages probably started with the Europeans, as we discuss below.**

- Before being written down 2000 years ago, the *Tipiṭaka* was transmitted orally for over 500 years. It is composed in a special, condensed way to make it easier to recite and remember.
- **It is dangerous to translate the *Tipiṭaka* word-for-word.** That is discussed in detail in “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#)” and “[Word-for-Word Translation of the Tipitaka](#).”
- **Instead of translating the *Tipiṭaka* to Sinhala, *Arahants* in Sri Lanka (including Ven. Mahinda) wrote Sinhala commentaries (called Sinhala *Atthakathā*) explaining the key concepts in the *Tipiṭaka*.** During oral discourses, *bhikkhus* explained those concepts in detail.
- But all those Sinhala *Atthakathā* were lost, and we only have commentaries written after about 500 CE (including *Visuddhimagga*), and they have many errors. See, “[Buddhaghosa and Visuddhimagga – Historical Background](#).” Note that Buddhaghosa wrote *Visuddhimagga* in Pāli (He learned Pāli while in Sri Lanka.) As I pointed out in the previous post, “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#).”

6. Buddhaghosa did use the words *anicca* and *anatta* in *Visuddhimagga* because the words “*anitya*” and “*anātma*” are NOT there in Pāli. But even those days, it is likely that the Sinhala texts used “*anitya*” (අනිත්ය) and “*anātma*” (අනත්ම). Note that the Sinhala words for *anicca* and *anatta* are අනිත්ය and අනත්ම (same pronunciation.) Even today, while the Pāli *Tipiṭaka* has the words *anicca* and *anatta*, the side-by-side Sinhala translation has අනිත්ය and අනත්ම (even though word by word they should be අනිත්ව and අනත්ව).

- **Thus, when *bhikkhu* Nynamoli translated *Visuddhimagga* to English, he also used the words “impermanence” and “no-self” corresponding to අනිත්ය (*anitya*) and අනත්ම (*anātma*).**
- In my earlier versions of this post, I had written that European scholars mistranslated *anicca* and *anatta* because they assumed those were the same as the Sanskrit words *anitya* and *anātma*. **But even *Theravāda* Buddhists had already made that transition by that time.** That likely happened during the peak of *Mahāyāna* Buddhism in India around 100-200 AD.

Confusion With Pāli and Sanskrit Texts

7. **Those Europeans first came across Sanskrit *vedic* texts in India.** Later, they found the Pāli texts in Sri Lanka, Burma, and other countries. **That time sequence is critical to note.**

- By the time of the arrival of English, Buddhism in India had totally vanished. There were no Pāli texts in India except those inscribed on the “[WebLink: en.wikipedia.org: Pillars of Ashoka](#),” the stone columns made by Emperor Ashoka about 300 years after the *Parinibbāna* of the Buddha.
- Another critical point is that Pāli was never a widely-used language in India. It appeared in India briefly while Buddhism flourished for a few centuries encompassing Emperor Ashoka’s reign.

The Book “The Search of the Buddha” by Charles Allen

8. To get an idea of how those European pioneers struggled to interpret the inscriptions on Ashoka pillars and later translate the *Tipiṭaka* itself, I highly recommend the book “The Search of the Buddha” by Charles Allen (2003). His family had been in India for generations serving in the British government, and he was born in India.

- The book has a lot of information and pictures of many historical sites in India before their restoration. It is truly fascinating to read about the efforts of those who dedicated their lives to the effort of uncovering Buddha Dhamma. Even though not shown in that book, historical sites in Sri Lanka and other Buddhist countries were also dilapidated. Also, see #5 of “[Elephant in the Room 1” – Direct Translation of the Tipitaka.](#)”
- The following video is in the Sinhala language. It provides an account of the restoration of *Ruwanvalisāya*, one of the largest *stupās* in Sri Lanka. That project took over 50 years and was completed with assistance from the British Governor in Sri Lanka. You can see the status of Buddhist temples and *stupās* in the 1800s before their restoration:

[WebLink: suttacentral: History of Ruwanwelisaya | රුවන්වෙලියා නැවත ගඩොත් ගසන බැවින් හමුදරුවන් | Naranvita Sumanasara Thero](#)

- In all those Asian countries (Sri Lanka, India, Burma, Thailand, etc.) Buddhism itself was in much worse shape than today. **Those European scholars were hugely responsible for the current revival of Buddhism.**

9. Those European pioneers thought Sanskrit and Pāli were very much related. They are related, but not in a useful way. Sanskrit adapted many Pāli terms but made them “sound sophisticated.” But the true meanings were not as apparent.

- For example, *pabhassara* in Pāli, Pāli became *prabhāsvara* in Sanskrit. While a knowledgeable person can discern the meaning of *pabhassara* from its Pāli roots (see, “[Pabhassara Citta, Radiant Mind, and Bhavaṅga](#)”), that is not true for the Sanskrit word *prabhāsvara*.
- Another example is *Paṭicca Samuppāda* (see, “[Paticca Samuppāda – “Pati+ichcha”+“Sama+uppāda](#)”), which was adapted to Sanskrit as “*Pratityasamutpāda*,” which does not convey any meaning.

Status of Buddhism in the 1800s

10. To complete the historical background relevant to this discussion, let me emphasize Buddhism’s “time evolution” starting in the 1700s.

- The invasions by the Portuguese, Dutch, and finally the British spanned over four centuries starting in 1498; see “[WebLink: en.wikipedia.org: Portuguese presence in Asia.](#)” This led to a drastic decline of Buddha Dhamma in all Asian countries. However, that trend finally changed with the insight of some British civil servants in the 1800s. This is why I recommend the book by Charles Allen in #8 above.
- Due to the efforts of those civil servants and several scholars in European countries, a coordinated effort was undertaken to collect and interpret the vast historical documents found in the Asian countries. Those included not only *Tipitaka* documents but *Mahāyāna* and *Vedic* documents too. **However, even Theravāda bhikkhus had already made the mistake of mistranslating *anicca* and *anatta* to be the same as Sanskrit *anitya* and *anātma* by that time.**
- There were no true Buddhist scholars with deep insight at that time. We can get an idea about the status of Buddhism in Asian countries at that time by the status of Buddhist temples in the video of #8 above.

Academic Credentials Not Enough to Teach Buddha Dhamma

11. Those European scholars did their best to interpret the vast collection of historical documents. Those efforts are well-documented in Charles Allen’s book. **Professor Rhys Davids was among those scholars, and most current interpretations are based on his work.**

- Following the original translations by Rhys Davids, Eugene Burnouf, and others, contemporary Sinhala scholars like Malalasekara (a doctoral student of Rhys Davids) “learned” Buddhism from the Europeans and thus started using wrong interpretations.

- Other Sinhala scholars like Kalupahana and Jayatilake also learned “Buddhism” at universities in the United Kingdom (received Doctoral degrees in Buddhism) and wrote books in English and Sinhala.
- Of course, scholars in other Buddhist countries did the same in their languages, and the incorrect interpretations spread throughout the world.
- So, I hope I have provided enough information to contemplate why the opinions of “scholars” are likely to be wrong due to reasons beyond their control. Again, I admire and appreciate what Rhys Davids, Burnouf, Muller, and others did in those days, and it was not their intention to distort Buddha Dhamma. It is not the fault of current scholars either.
- **Just to emphasize: Buddha Dhamma needs to be learned from a true disciple of the Buddha who has attained at least the *Sotāpanna* stage.** Academic credentials mean NOTHING as far as teaching Buddha Dhamma is concerned. With all due respect to those European scholars, they DID NOT understand the key message of the Buddha. That message is that the rebirth process is filled with suffering, and the goal of a true Buddhist is to stop the rebirth process and attain *Nibbāna*. See, “[Basic Framework of Buddha Dhamma](#).”

Tipiṭaka was written on Ola Leaves

12. It is also important to note that mass printing was not available until recent years and became common only in the 1800s; see, “[WebLink: newworldencyclopedia.org: Printing press](#). “

- In the early days, *Tipiṭaka* was written on specially prepared leaves and needed to be re-written by hand every 100-200 years before they degraded. So, we must be grateful to the *bhikkhus* in Sri Lanka who did this dutifully over almost 2000 years. **That served another important purpose. That process automatically took into account any changes to the Sinhala script over those two thousand years!** See, “[Preservation of the Buddha Dhamma](#).”
- Thus mass production of books became possible only with the new rotary printing presses in the middle of the 1800s. By the time those key concepts had been mistranslated, printing had become widespread.
- [WebLink: en.wikipedia.org: The Pāli Text Society](#) was founded in 1881 by Rhys Davids, who started printing those translations. So, it was unfortunate that those “distorted English translations” spread throughout the world.
- Luckily, we still have the original Pāli *Tipiṭaka* and three original commentaries.
- With the help of those three original Pāli commentaries, Waharaka Thero “re-discovered” the (correct interpretations of) Buddha’s teachings over the past 25 years or so. Unfortunately, Waharaka Thero attained *Parinibbāna* recently; see, “[Parinibbāna of Waharaka Thero](#).”

The Buddha prohibited the translation of *Tipiṭaka* to Sanskrit

13. The Buddha had foreseen the problems of a direct translation of the *Tipiṭaka*. He warned not to TRANSLATE the *Tipiṭaka* to ANY LANGUAGE, particularly to Sanskrit. There were two *Brahmins* by the names of Yameḷa and Kekuṭa who were experts on the *Vedic* Texts. They became *bhikkhus* and asked the Buddha whether they should translate the Pāli *suttā* to Sanskrit.

- The Buddha admonished them that *Sanskrit* was a language with musical overtones developed by the high-minded *Brahmins*. Thus, it was impossible to convey the true meanings of *Maghadhi* (Pāli) words in Sanskrit; see [WebLink: tipitaka.fandom.com: Chulavagga 5.33](#).
- In the Sutta Central English translation, the Pāli word for *Sanskrit* (*Chandasa*) is mistranslated as “metrical”; see, “[WebLink: suttacentral: 15. Minor matters \(Khuddaka\)](#),” which is the translation of “[WebLink: suttacentral: 1. Khuddakavatthu](#).” The relevant Pāli text is located close to the end, and starts as, “*Tena kho pana samayena yameḷakekuṭā nāma...*”

Role of the Commentaries To *Tipiṭaka*

14. Therefore, the *Tipiṭaka* was not translated even to the Sinhala language for 2000 years in Sri Lanka. Instead, commentaries were written in Sinhala to expand and explain the *Tipiṭaka*.

- Unfortunately, ALL those have been lost except for three commentaries in Pāli included in the *Tipiṭaka*. See, “[Buddhaghosa and Visuddhimagga – Historical Background](#).”
- With the above explanation, we can understand why those standards established in the late 1800s actually distorted Buddha Dhamma. Of course, it was not intentional.

Pāli Is a Unique Language

15. I cannot emphasize enough that Pāli is unlike any other modern language. Some meanings even come from how one pronounces words. Again to emphasize:

- Pāli does not have its own alphabet. *Tipiṭaka* was written in Pāli with Sinhala script.
- As the Buddha himself admonished, Sanskrit words cannot convey the meaning of Pāli words. That is because many Pāli words have been “Sanskritized,” which leads to much confusion. For example, there is no corresponding word for *anatta* in Sanskrit. But the Sanskrit word “*anātma*” is regularly used as the translation of “*anatta*.” *Anatta* does not mean “no-self,” but “*anātma*” does have that meaning, as mentioned above.
- While a Pāli-English dictionary could be useful in some cases, there are cases where they give wrong interpretations (*anicca*, *anatta*, *pabha*, etc.); see, “[Pāli Dictionaries – Are They Reliable?](#).”

“*San*” Is a Unique Word in Pāli

16. A key Pāli word, the meaning of which has been hidden for thousands of years, is “*san*” (pronounced like son). See the section on “[What is “*San*”? Meaning of Sansāra \(or Samsāra\)](#).”

17. In the *Dhammapada* verse,

<p>“<i>Aneka jāti sansāraṃ sandā vissan anibbisān gahakaram gavesan to dukkhā jāti punappunam</i>”</p>	<p><i>Aneka-jāti-samsāraṃ sandhāvissam anibbisam Gaha-kāraṃ gavesanto dukkhā jāti punappunam Gaha-kāraka diṭṭho 'si puna gehaṃ na kāhasi Sabbā te phāsukā bhaggā gaha-kūṭaṃ visaṅkhatam Visaṅkhāra-gataṃ cittaṃ taṇhānaṃ khayam-ajjhagā</i> For many lifetimes in the round of birth, Wandering on endlessly, For the builder of this house I searched — How painful is repeated birth. House-builder you’ve been seen, Another home you will not build, All your rafters have been snapped, Dismantled is your ridge-pole; The non-constructing mind Has come to craving’s end.</p>
---------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

- There are four places above where “*san*” comes in. This verse captures the intense joy felt by the Buddha at the moment of attainment of *Buddhahood*.
- The word “*san*” appears very frequently in the *Tipiṭaka*. But it is often masked by the fact that in many places, it rhymes as “*sam*” in many word combinations as in “*samsāra*,” “*sampādetā*,” “*Samma*”; see, “[What is “*San*”? Meaning of Sansāra \(or Samsāra\)](#).”

Critical Role of the Printing Press in Widespread Circulation of the Incorrect Interpretations

18. The printing press became widely available only after the rotary press was invented in 1843: “[WebLink: newworldencyclopedia.org: Printing press](#).” As pointed out above, Rhys Davids started publishing the

English translations of the *Tipiṭaka* in 1881. **That led to the widespread circulation of the incorrect interpretations of those Early European scholars!**

- Up to that time, the printed version of the Pāli *Tipiṭaka* was on specially prepared ola (palm) leaves; see, [“Preservation of the Dhamma.”](#) This was a laborious process, as detailed in that post. Fortunately, *bhikkhus* kept re-writing the *Tipiṭaka* material roughly every hundred years when the “old version” started degrading.
- The critical point is that there were only versions of the original *Tipiṭaka*. It was not in wide circulation until the printing press was invented, just in time for the incorrect interpretations to be widely circulated. Rhys Davids started publishing the English translations of the *Tipiṭaka* in 1881.
- This is why there is no record of the correct interpretations of keywords like *anicca* and *anatta* in Sinhala. Those interpretations were in the original Sinhala commentaries (Sinhala *Atthakathā*.) It is safe to assume that the same holds in other Asian countries.
- The invention of the printing press was a critical factor in spreading the incorrect interpretations that early European scholars came up with (unintentionally)!

14.17 Tipiṭaka Commentaries – Helpful or Misleading?

December 6, 2017; rewritten February 2, 2023; revised April 29, 2023

1. I recently found the following essay on *Tipiṭaka* commentaries: “[WebLink: accesstoinsight.org: Beyond the Tipitaka : A Field Guide to Post-canonical Pāli Literature](https://www.accesstoinsight.org/beyond-the-tipitaka.html)”. It describes the importance of such commentaries in clarifying critical concepts in the *Tipiṭaka*. I will present evidence to the contrary. Such commentaries have introduced contradictory explanations.

- Over the years, on internet discussion boards, I have also seen heated discussions on critical concepts of Buddha Dhamma, like *anicca*, *anatta*, and *anidassana viññāṇa*. For example, see “[Anidassana, Appatigha Rūpa Due to Anidassana Viññāṇa](#).”
- I often wonder about the immense amount of time people waste discussing the meaning of crucial Pāli words in *Tipiṭaka suttā*. They go back and forth between different interpretations without reaching any conclusions. I hardly see any issue resolved fully in such discussions. The same topic is discussed year after year without much progress.
- One key factor contributing to this confusion is those commentaries; they are inconsistent with Buddha’s original teachings in the *Tipiṭaka*. The other key factor is the incorrect translation of crucial Pāli words. Both these issues are discussed below.

2. I hope this post will help you think about a new approach to finding the “correct teachings of the Buddha.” By discarding sources of incorrect interpretations once and for all, one could save a lot of time and focus on making progress.

- When I seriously started studying different versions of Buddhism several years ago, this was the strategy that I used to eliminate “corrupt” or “contaminated” versions. I eliminated Mahāyāna, Vajrayana (Tibetan), and Zen versions first. After I came across *desanās* of Waharaka Thero, I could eliminate Visuddhimagga and other relatively recent commentaries. These steps are discussed in detail below.
- Then I was left out with just the *Tipiṭaka* and its three ancient, original commentaries composed during the time of the Buddha; see below. A consistent picture that is crystal clear has emerged for me.
- I hope others can follow the same procedure. If everything can be understood within that framework, what is the need for more sources? As the principle of philosophy “[WebLink: wiki: Occam’s razor](#)” (or Ockham’s razor,) says, the simplest explanation without any inconsistencies is the best.

3. My crucial assertion is that the *Tipiṭaka* and the three original commentaries of *Paṭisambhidāmagga*, *Peṭakopadesa*, and *Nettipakaraṇa* are sufficient to clarify the original teachings of the Buddha.

- This was made possible by my Noble teacher Waharaka Thero, who was able to discern the true meanings of key Pāli words with the help of those three original commentaries; see, “[Parinibbāna of Waharaka Thero](#).”
- On this website I present this self-consistent picture that came out of the efforts of Waharaka Thero.
- Note that I am not asking anyone to take what I present on this website as the correct version. It is up to each person to look at the evidence and decide. As far as I can see, everything at this site is consistent with the *Tipiṭaka* and self-consistent. I encourage all to point out inconsistencies, because my goal is 100% consistency.
- Self-consistency, i.e., making sure that there are no contradictions is the scientific procedure used by modern scientists to evaluate the validity of a scientific theory. See “[Buddha Dhamma: Non-Perceivability and Self-Consistency](#).”

4. There is no need to consult any commentary besides the three original ones mentioned above. I have explained at length why the other critical commentaries used today provide inaccurate and inconsistent explanations; see, “[Historical Background](#).”

The above mentioned essay (in #1) is a good example of some misconceptions about the importance and validity of *Tipiṭaka* commentaries. **When I say “commentaries” from now on below, they do not include the original three commentaries included with the *Tipiṭaka*.**

- In the following, **the statements within quotation marks and highlighted in red** are from the above essay and are accompanied by my comments pointing out the flaws in those statements.
5. **“The *Tipiṭaka* (Pāli canon) assumed its final form at the Third Buddhist Council (ca. 250 BCE) and was first committed to writing sometime in the 1st c. BCE. Shortly thereafter, Buddhist scholar-monks in Sri Lanka and southern India began to amass a body of secondary literature: commentaries on the *Tipiṭaka* itself...”**
 - Not true. The original three commentaries mentioned in #3 above (*Paṭisambhidāmagga*, *Peṭakopadesa*, and *Nettipakaraṇa*) were compiled during the time of the Buddha, and those still are in the *Tipiṭaka* itself:
 - Those three original commentaries are in Pāli, but many others were written in the Sinhala language, and all of those have been lost, as discussed below.
 6. **“Most of these texts were written in Sinhala, the language of Sri Lanka, but because Pāli — not Sinhala — was the *lingua franca* of Theravāda, few Buddhist scholars outside Sri Lanka could study them. It wasn’t until the 5th c. CE, when the Indian monk Buddhaghosa began the laborious task of collating the ancient Sinhala commentaries and translating them into Pāli, these books first became accessible to non-Sinhala speakers around the Buddhist world”**
 - This statement refers to those early Sinhala commentaries that have since been lost.
 - **It is correct that Buddhaghosa’s** *Visuddhimagga* and other commentaries, such as *Vimuttimagga*, were written in Pāli by Indian scholars.
 - It is also important to note that incorrect translations of those Pāli words led to more problems when those were translated to English; see #7 below.
 7. **“These commentaries (*Atthakatha*) offer meticulously detailed explanations and analyses — phrase-by-phrase and word-by-word — of the corresponding passages in the *Tipiṭaka*.”**
 - First, *Atthakatha* (a Sinhala word meaning “true accounts”) was the ancient commentaries on *Tipiṭaka* written in Sinhala. **They ALL have been lost**; see [“Preservation of the Dhamma.”](#)
 - **So, it is misleading to refer to those *Atthakatha* as the commentaries in question.** In contrast, the commentaries in circulation today are NOT those of ancient *Atthakatha*, but more recent ones like *Visuddhimagga*.
 - Buddhaghosa’s mission was to translate the material in Sinhala *Atthakatha* to Pāli so that those *bhikkhus* in India could read them. **Unfortunately, he incorporated many *Vedic* concepts**; see [“Buddhaghosa’s *Visuddhimagga* – A Focused Analysis.”](#)
 - **Further problems were introduced when *Visuddhimagga* was translated into English in recent times.** Today, the original Pāli version of *Visuddhimagga*, and its recent English translation, are available on Amazon; see Refs. 1 and 2 below.
 8. **“Almost everything we know today about the early years of Buddhism comes to us from these post-canonical books”**
 - This is entirely false. Those **post canonical commentaries** (such as *Visuddhimagga*) have “muddied the waters” than helped; see, [“Buddhaghosa and *Visuddhimagga* – Historical Background”](#) and [“Buddhaghosa’s *Visuddhimagga* – A Focused Analysis.”](#)
 - What I am saying is to examine the evidence presented in those posts. **If one agrees, then one can remove *Visuddhimagga* as a reliable source. That itself will solve half the problem.**

- **The second problem is the incorrect translation of crucial Pāli words in those commentaries and *Tipiṭaka* suttā;** see, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”
 - As I have presented evidence throughout this website, the *Tipiṭaka* and the three original commentaries are enough to guide us.
9. “First, the chronicles and commentaries provide a vital thread of temporal continuity that links us, via the persons and historical events of the intervening centuries, to the *Tipiṭaka*’s world of ancient India. A *Tipiṭaka* without this accompanying historical thread would forever be an isolated anachronism to us, its message lost in clouds of myth and fable, its pages left to gather dust in museum display cases alongside ancient Egyptian mummies...”
- **There are no myths or fables in the *Tipiṭaka*.** I would challenge anyone to show any evidence from the *Tipiṭaka*. This is an irresponsible and egregious statement.
10. “Second, almost everything we know today about the early years of Buddhism comes to us from these post-canonical books..”
- Nothing in these commentaries provides any significant information about the time of the Buddha. They may provide information about the time at which they were written. For example, Visuddhimagga was written about 800 years after the Buddha.
11. “One might reasonably wonder: how can a collection of texts written a thousand years after the Buddha’s death possibly represent his teachings reliably? How can we be sure they aren’t simply derivative works, colored by various irrelevant cultural accretions? First of all, although many of these texts were indeed first written in Pāli a thousand years after the Buddha, most Sinhala versions upon which they were based were written much earlier, having been passed down via an ancient and reliable oral tradition...”
- This is the point I am making. We do know that, for example, Buddhaghosa distorted Buddhist meditation techniques, *Ānāpāna* meditation was misinterpreted as breath meditation and Hindu *kaśiṇa* meditations were also incorporated,
 - For details, see “[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#)” and “[Is Ānāpānasati Breath Meditation?](#).”
12. “But what of the credentials of the commentators themselves: can their words be trusted? In addition to living a monastic life immersed in Dhamma, the compilers of the commentaries possessed unimpeachable literary credentials: intimate acquaintance with the *Tipiṭaka*, mastery of the Pāli and Sinhala languages, and expert skill in the art of careful scholarship. We have no reason to doubt either their abilities or the sincerity of their intentions”.
- This is also a critical issue. As I discussed in those posts mentioned above, Buddhaghosa was a Vedic Brahmin who distorted *Ānāpānasati* to “breath meditation” and incorporated *kaśiṇa* meditations into Visuddhimagga; no such *kaśiṇa* meditations are to be found anywhere in the *Tipiṭaka*.
 - Like so many late commentators, Buddhaghosa was just another philosopher like Nagarjuna. By the way, Nagarjuna was also a commentator, and his work led to the rising of the Mahāyāna version of Buddhism.
 - I have discussed the drawbacks of Mahāyāna; see, for example, “[Key Problems with Mahāyāna Teachings](#)” and “[Saddharma Pundarika Sutra \(Lotus Sutra\) – A Focused Analysis](#).”
 - The same kind of arguments can be applied to Tibetan Buddhism (Vajrayāna) and Chinese Zen Buddhism; all these are offshoots of the original teachings in the *Tipiṭaka*; see, “[Historical Background](#).” It is well-worth the time to read this section before coming to conclusions.
13. “And what of their first-hand understanding of Dhamma: if the commentators were scholars first and foremost, would they have had the sufficient meditative experience to write with authority on meditation? This is more problematic”.

- This is the only statement that I agree with. They were just “scholars” and philosophers, who had not progressed in practice.
- This is true today as well. Many “scholars” have written books on Buddha Dhamma without making significant progress in following the Noble Path. Many are not even nominally Buddhists; some are “secular Buddhists” who do not believe in rebirth or *Nibbāna*; see, “[Buddhism without Rebirth and Nibbāna?](#).”
- I am not trying to put them down. They serve a meritorious purpose in teaching how to live a moral life. However, those books/journal papers/websites cannot be used to **clarify more profound teachings** in the *Tipiṭaka*.

14. A key point missing in the current discussion is that it is impossible to comprehend the critical concepts like *anicca* and *anatta* without at least attaining the *Sotāpanna* stage of *Nibbāna*. However, these days, people tend to gauge their qualifications by checking only whether a given person is an “academic scholar”.

- Like only a practicing physician can genuinely understand and diagnose a patient, not one who has just studied medical textbooks.
- Only an *Ariya* (a Noble person) — who has practiced the actual teachings and at least attained the *Sotāpanna* stage of *Nibbāna* — can comprehend deep concepts like *anicca*, *anatta*, *viññāṇa*, and *saññā*. **One cannot fully understand such deep concepts by just studying or reading about them.** For example, see, “[What is Saññā \(Perception\)?](#).”

15. The most referred to commentaries (these days) are Buddhaghosa's [WebLink: wiki: Visuddhimagga](#) and Upatissa's [WebLink: wiki: Vimuttimagga](#) (to a much less extent). The original Pāli text for the latter was long believed to have been lost. For centuries, discussions about the text relied on a 5th-century Chinese edition.

- As we have established, those later commentaries — including *Visuddhimagga* and *Vimuttimagga* — were written in Pāli.

16. Therefore, those late commentaries lead to confusion in two ways:

- One is the erroneous interpretations by the commentators themselves, as discussed above.
- The other is incorrect translations — initially done by early European scholars — in mistranslating key Pāli terms; see, for example, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).” This has made the situation even worse.

These are two critical points to consider by those tempted to refer to those late commentaries. I cannot emphasize the importance of those two points enough.

17. Then, some people quote from Chinese *Āgama*. Even though those original Chinese documents COULD BE authentic, my point is that they were also derived from the *Tipiṭaka* and **thus serve no purpose as additional resources.**

- They could be valuable for those proficient in Chinese but cannot read Pāli, Sinhala, or English.

18. Finally, to re-emphasize my main point: The *Tipiṭaka* and the three original commentaries (*Paṭisambhidāmagga*, *Peṭakopadesa*, and *Nettipakaraṇa*) included there are sufficient to clarify the Buddha's original teachings. See “[Preservation of the Buddha Dhamma](#).”

- Using just the *Tipiṭaka*, I have also pointed out some current misinterpretations in Theravāda Buddhism, mainly due to the influence of Buddhaghosa's *Visuddhimagga*; see, “[Incorrect Theravāda Interpretations – Historical Timeline](#)” and posts referred there.
- There still could be some minor inconsistencies on the website, and I appreciate those readers who have pointed out some of them, which has led to improvements. But I have high confidence in the correctness of key concepts.

- Please do not hesitate to comment on any inconsistency with the *Tipiṭaka* or within the website. However, for the reasons I have detailed above, please do not quote from other sources. This website aims to have a consistent explanation of Buddha's teachings in English in one place.

I have recently started a new section highlighting some apparent contractions in many English translations of the *Tipiṭaka*: “[Elephants in the Room](#).”

15.1 Buddhist Chanting – Introduction

Revised February 11, 2021

1. This section on Chanting helps cultivate *saddhā* (faith) in the Buddha, Dhamma, and Saṅgha. Which also helps calm the mind and grasp more profound concepts. For those who believe that there is no value in these “ritual-like” procedures, it may be a good idea to read the post, “[Panca Indriya and Panca Bala- Five Faculties and Five Powers](#).”

- If done with understanding, these are not rituals as in “*silabbata paramasa*”.
- Therefore, as I keep adding items to this section, I will try to provide the deep meanings behind these “seemingly ritualistic” chantings.
- In addition to the deeper meanings, there are subtle benefits in listening to chantings, especially those by *Ariyā* or Noble Persons. This is why I decided to add the sound recordings by the Venerable Thero.

2. The Buddha said that the mind takes precedence over everything else. Our thoughts control our speech and bodily actions. And these thoughts get their moral power from wisdom (*paññā*) and the joyful state (*pīti* or “*preethi*”) of the mind.

- One can make a given meritorious deed much more powerful by doing it with joy and understanding. The most potent *kusala citta* is done with “joy and understanding” (a *somanassa-sahagata, ñāṇa-sampayutta citta*); see, “[Javana of a Citta – Root of Mental Power](#).”
- Recent scientific studies are beginning to illustrate the power of the focused mind. See, for example, “The Biology of Belief” by Bruce H. Lipton (2008) and “Biocentrism” by Robert Lanza (2009).
- Thus chanting done with understanding can have benefits, especially for those who have a dominant “*saddhā indriya*” or have a high degree of faith in the Buddha or Buddha Dhamma.

3. **However, one should not force anything on the mind.** If chanting is not something that appeals to someone, then it should not be forced. Different people start off with different tendencies (i.e., they have a dominant faculty or power, see, “[Panca Indriya and Panca Bala- Five Faculties and Five Powers](#)”). **Out of *sati*, *saddhā*, *virīya*, *samādhi*, and *paññā*, the dominant one should be the focus.** As one cultivates the Path, the other four will also grow.

- This is also related to the concept of how one’s character (*gathi*) and habits change as one follows the Path. Then one’s tendencies, associations, etc., will also gradually change; see, “[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavas\)](#).”
- Thus one may want to concentrate just on the topics on the site that are appealing to oneself. Once in a while, one can take a look at other sections and see whether their opinions on those sections have changed or not.
- The main thing is to stay on the path of least resistance and the topics that can be easily comprehended.

3. **A useful resource is** “[WebLink: buddhistlibrary.org: Vandana: The Album of Pāli Devotional Chanting & Hymns](#).”

Next, “[Namaskaraya – Homage to the Buddha](#)”,

15.2 Namaskaraya – Homage to the Buddha

1. In the *Theravāda* tradition, it is customary to pay homage to the Buddha (*Namaskāraya*; pronounced “namaskāraya”), recite the Three Refuges (*Tisarana*, where “*tī*” is three and “*sarana*” means refuge or protection; pronounced “Thisarana”) and undertake to observe the five precepts (*Panca Sīla*; pronounced “pancha seela”) on visiting a place of worship or before starting a meditation session.

- Some people just do the Namaskāraya if they do not have time to recite the Tisarana (Refuge in Buddha, Dhamma, Saṅgha) or the Panca Sīla (five precepts; sometimes eight or ten precepts).

2. One can recite the following stanza three times by oneself or at more formal occasions (e.g., visiting a temple) a Buddhist monk administers them.

“*Namo tassa bhagavato arahato sammā sambuddhassa*”

- A brief translation is, “I pay homage to the fully Enlightened One who found the truth about the existence and became free of all defilements”.
- Another conventional translation is, “I pay homage to the Blessed One, the Exalted One, the fully Enlightened One”.
- The deeper meaning is discussed below.

3. **Both interpretations are important.** For someone starting out, without much knowledge of Dhamma (but still sees the value in Dhamma) and thus wishes to pay respects to the Buddha, the conventional meaning itself is the dominant.

- But the Buddha himself said that the best way to pay homage to him is to learn Dhamma and to follow the Path. That is the more deeper meaning of the *Namaskāraya*. But they also have the reverence for the Buddha himself. As the knowledge in Dhamma grows, the second interpretation becomes clear, while not losing the first.

4. Here is a recital of the *Namaskāraya* by a Venerable Thero (volume adjustment on the right). It is normally recited three times:

[WebLink: Listen to verse of : Namaskāraya](#)

You can download the file below by clicking “DOWNLOAD”. You can play it there or right-click on the screen and choose “save as..” to save to your computer.

[Download](#)

More audio files are at: “[Sutta Chanting \(with Pali Text\)](#).”

Namaskāraya – What Does it Really Mean?

“*Namo tassa bhagavato arahato sammā sambuddhassa*”

1. Most Pāli verses have two (or more) meanings: one is the conventional (“*padaparama*”) meaning, and the other is the deeper meaning that helps understand the deeper idea behind the verse. Unfortunately, most times it is the conventional idea that that is brought out when translating even whole *suttā*.

- In the case of *suttā*, a *sutta* that was delivered over an hour (sometimes many hours, like the *Dhamma chakka pavattana sutta*) is normally translated word-to-word in a few pages; see, “[Sutta Interpretations](#).”
- As I explained in the post, “[Preservation of the Dhamma](#)”, most existing *sutta* translations are incomplete at best, and erroneous most of the time.
- Even the conventional meaning can be useful in some cases, like in *namaskāraya*, *Tisarana*, and the five precepts. For those who do not have a deeper understanding, the deeper meanings may not serve the

purpose of bringing “joy to the heart” or “*citta pasāda*” (pronounced “*citta pasāda*”); for a deeper discussion on *citta pasāda*, see, “[Javana of a Citta – The Root of Mental Power](#).”

- Thus for those who are new to the deeper meanings in Dhamma, the conventional interpretations may be a good start. As knowledge in Dhamma grows, the second interpretation becomes clear without losing the first, i.e., reverence to the person himself can also only grow as one learns how valuable his Dhamma is.

2. What we have here is a short phrase that can be correctly translated in a short essay. Let us see what is really meant by this verse.

- “*Namo*” means incline as in accepting something with this reverence because of its value; “*tassa*” means “to this” or “because of this”. This is why we bend our heads to signify this.
- “*bhaga*” is to separate and “*vata*” is the usually translated as body, but it has more wider meaning to anything in this world. The Buddha, in trying to show that uselessness of clinging to one’s body, advised to separate the body into 32 parts and see that there is nothing substantial in any of the parts. Even though we highly value our bodies, it will decay with old age, and will eventually give us only sicknesses and ailments. And it will last only about 100 years.
- In the wider sense, anything in this world can be divided into parts and be shown that there is nothing substantial in them.
- Once we see that it is unfruitful to cling our bodies (and anything in general), we lose the craving (“*raha*” in Pāli or Sinhala) and become “*arahant*”(from “*a*” + “*raha*”). The word Arahant also comes from this meaning, i.e., someone who has given up craving for worldly things, by comprehending the true nature.
- As we saw in the post, “[What is “Saṇ?” – the Meaning of Saṁsāra](#)”, “*saṇ*” means accumulating worldly things. “*ma*” means become free of doing that. Thus “*sammā*” (*saṇ+ma*) means “stop accumulating worldly stuff that will only cause suffering in the end”.
- The accumulation of worldly things lead to preparation of future births or “*bhava*”. *Sambuddhassa* (*saṇ+bhu+uddassa*) means “remove from the root the causes for preparing bhava via accumulating *saṇ*”, i.e., become free of the rebirth process or to work towards *Nibbāna*.

3. Now we can see the whole verse:

“By analyzing my body and other worldly things with wisdom, I have come to understand the unfruitfulness of clinging to such things, and I incline to rout out the rebirth process (i.e., existence in the 31 realms) and attain *Nibbāna*”.

- Here incline means one keeps “bent on attaining that goal”. With deeper understanding of Dhamma one’s resolve will be strengthened. As with most things in Buddha Dhamma, it is always about one’s mind.
- The resolve has to come through understanding. There is no one watching, and no one else monitoring the progress; it is one’s own mind that is doing all that.

4. Finally, the word *namaskāraya* (*nama+as+kāraya*, where “*nama*” is one’s name, “*as*” pronounced like “us” means remove, and “*kāraya*” means doing) conveys the idea that one is making a resolve to get rid of the attachment one has for one’s worldly things. It is a condensed version of the verse.

- Of course the conventional meaning of “*namaskāraya*” is “paying homage”.

15.3 Supreme Qualities of Buddha, Dhamma, Sangha

May 28, 2016 ; revised October 1, 2018; April 26,2020; August 27, 2022

Introduction

1. It is traditional to start a meditation session with an homage to the Buddha (*Namaskāraya*):

- *Namo tassa bhagavato arahato sammāsambuddhassa*
- *Namo tassa bhagavato arahato sammāsambuddhassa*
- *Namo tassa bhagavato arahato sammāsambuddhassa*

and then recite the supreme qualities of the Buddha, Dhamma, and Sangha.

Here is a recital of the *Namaskāraya* by the Venerable Thero (you need to adjust the volume control on your computer). It is normally recited three times: [WebLink: mp3 audio: Namaskāraya – Homage to the Buddha](#)

- The meaning of the above phrase is described in “[Namāskaraya – Homage to the Buddha](#).”

The 24 Supreme Qualities

2. There are nine, six, and nine supreme qualities attributed to the Buddha, Dhamma, and Sangha respectively.

- These are listed and discussed in several suttā in the *Dīgha Nikāya* of the *Tiṭṭaka*.
- For example, see “10. *Dhammādāsadhammapariyāya*” section of the “[Mahā Parinibbāna Sutta \(DN 16\)](#).”
- The Buddha tells Ven. Ananda that when one becomes a *Sotāpanna*, one would begin to understand these qualities and will have “unbreakable faith” in the Buddha, Dhamma, Sangha (*Tiratana*, or Three Jewels.)

3. The 24 supreme qualities are called “*suvisi guṇa*,” where *suvisi* means 24 and *guṇa* are the qualities. [There are two main ways to interpret and utilize these 24 qualities.](#)

- [Chanting of these qualities can provide a calming effect on the mind](#) and is normally done before a formal meditation session; see “[Tisarana Vandanā and Its Effects on One's Gati](#).”
- The meaning of the word “*vandanā*” is “*va*” + “*andha*” + “*nā*”, where “*va*” is for “*vaya*” or destroy, “*andha*” is for blind, and “*nā*” is for “*nyāya*” or the procedure for getting rid of moral blindness and attaining *Nibbāna*. [The path to attaining Nibbāna is encoded in the Tiratana vandanā](#). We will discuss this in detail in a future post.
- Also, this chanting is alternatively called *Tiratana vandanā* (where *Tiratana* means the Three Jewels) OR *Tisarana vandanā* (where *Tisarana* means “guidance from the Three Jewels”). It is imperative to recite them correctly.

Here is a recording of the *Tiratana Vandanā* by the Venerable Thero ([You need to control the volume level on your computer](#)):

[WebLink: Listen to the verses of Tiratana Vandana](#)

- The recital should break at places where there is a coma to state each quality separately and should not break in the middle (e.g., no breaks in *anuttaro purisadamma sārathi*); see below.

4. These qualities can only be partially understood and never fully grasped. If a person with a mathematics Ph.D. teaches addition/subtraction to a first-grade student, that student cannot fully appreciate the capabilities

or qualifications of the teacher. When the same student grows up and learns higher mathematics later from the same teacher at a university, he can appreciate the teacher's capabilities more.

- In the same way, the qualities of the Three Jewels can be appreciated only with more learning of Dhamma. When I first wrote the original post on this subject more than a year ago, my understanding was much less than now. In the meantime, I have understood more and also experienced the power of the recital of these qualities.

Supreme Qualities of the Buddha

5. **Correct Recital:** *itipi so bhagavā araham sammāsambuddho vijjācaraṇasampanno sugato lokavidū anuttaro purisadammasārathi satthā devamanussānam buddho bhagavā'ti.*

- It is imperative to break the phrase “*itipi so*” into two words; “*so*” means “him.”
- **Most people recite it as a single word “*itipiso*” and that gives not only an incorrect but a derogatory meaning: “*piso*” is for “*pisācha*” or a “lowly being like a *preta*.”**
- “*itipi so Bhagavā*” means “because of (the following qualities) he (Buddha) is.”

6. There are nine qualities of the Buddha stated in the above verse. Each quality is impossible for a human being to describe fully.

- As one learns more and more Dhamma, one truly begins to understand the value of a Buddha. It is said that an *Anāgāmi* can better understand the qualities of a Buddha than a *Sotāpanna*, and an *Arahant* even better.

7. Here is the list of the nine qualities:

- *Araham* – “*A*” + “*raham*” or not a trace of defilement (attachment for sense pleasures) left.
- *Sammāsambuddho* – “*Saṇ*” + “*mā*” + “*sambhava*” + “*uddha*”, or who discovered the way to dissociate from this suffering-filled world by removing “*saṇ*”; see, “[What is “Saṇ”? Meaning of Sansāra \(or Samsāra\).](#)”
- *Vijjācaraṇasampanno* – “*Vijjā*” (science or knowledge) + “*caraṇa*” + “*saṇ*” + “*panno*” or perfectly knowledgeable about how the world arises (out of “*saṇ*”).
- *Sugato* – Ultimate in “*su*” + “*gatī*” or “good qualities.”
- *Lokavidū* – “*Loka*” + “*vidu*,” or having the ability to examine and explain any of the three worlds that encompass everything: world of mental formations (*Sankharaloka*), the world of beings (*Sattaloka*), the world of things (*Okasaloka*).
- *Anuttaro purisadammasārathi* – “*Purisa*” here is not a gender: *purisa dhamma* is the highest qualities; “*anuttara*” means unmatched. [*purisadammasārathi* : the modesty of the man. *damma* :[adj.] tamed or trained. *sārathi* :[m.] a charioteer; a coachman; a driver.]
- *Satthā devamanussanan* – Teacher of celestial and human beings.
- *Buddho* – Perfectly Enlightened, uprooted all “*bhava*” (*bhava uddha*).
- *Bhagavā* or *Bhagavath* – “*Bha*” + “*ga*” + “*vatha*” – Able to examine a living being's origin in many different ways. Here “*Bha*” is *bhava* or existence, and “*ga*” means connection or relationship, and “*vatha*” is the form of any being.

8. The above is, of course, not the only meaning. Since each word describes the infinite qualities of the Buddha, there are other meanings. Thus it is best not to get hang-up on the translations above.

- It is best to get an idea of these qualities and ALWAYS recite them in Pāli. As one's understanding grows, one will realize the meanings better.

- Pāli is a phonetic language. Meanings come via sounds. Thus what is imperative is to be able to recite the Pāli phrase above to the best of one's ability. I provided the recordings at the end of the post, where my teacher *Thero* recites them as they should be.

Supreme Qualities of the Dhamma

9. There are six supreme qualities of Dhamma:

“Svākkhāto bhagavatā dhammo sandiṭṭhiko akāliko ehipassiko opaneyyiko paccattam vedittabbo viññūhī’ti”

First, *Bhagavathā Dhammo* is the Dhamma taught by the Buddha.

- *Svākkātho* – leads to the removal of *sansāric* suffering via getting out of the 31 realms. Here “*svakkata*” (“*sva*” for “self” and “*akkata*” or “*akrutha*” or “*akriya*” means putting out of action) **means getting rid of the concept of a “me”** (*asmai māna*). It is not about whether a “self” exists; it is rather to realize that nothing in this world is worth being considered “mine.”
- *Sandiṭṭhika* – It **allows one to comprehend “saṇ”** (“*saṇ*” + “*diṭṭhī*”), the key reason for the existence in this world; see, “[What is “Saṇ”? Meaning of Sansāra \(or Saṁsāra\).](#)”
- *Akaliko* – This **Dhamma does not change over time**; it is the same Dhamma that is delivered by all Buddhas (“*a*” + “*kālika*”). Another meaning is that it leads to the removal of darkness (due to *avijjā*); here, “*kalu*” means “black” or “darkness.” [*kālika* :[adj.] temporal = relating to time.]
- *Ehipassiko* – “*Ehī*” + “*passika*” or **defilements can be removed** (“*passika*”) **when each ārammaṇa comes to the mind** (“*Ehī*”). One does not wait to remove defilements in a formal meditation session. Rather, one takes care of that at each instant when an immoral thought comes to the mind (with *Ānāpāna* or *Satipaṭṭhāna*). See “[Is Ānāpānasati Breath Meditation?](#)” [*ehi* :[imper. of eti] come, come here.]
- *Opanayiko* – “*Opa*” + “*naiko*,” where “*Opa*” means “*upata*” or “origins” and “*nyāya*” means the principle or nature. Thus, **one can comprehend how each existence (*bhava* and *jāti*) arises**.
- *Paccattam vedittabbo vinuhi*- “*paccaya*” can be understood by looking at the origins (*veda* or *vedic*): *vedittabbo*. “*Vinnu*” means the hidden can be seen (like something hidden in a vessel by piercing it). Anything in this world arises due to *Paṭicca Samuppāda*. **Thus, Dhamma allows one to “see-through” how this whole world, together with all the suffering, arises.**

Supreme Qualities of the Saṅgha

10. Here it must be noted that *Saṅgha* is not *bhikkhus*. *Saṅgha* means the Nobles or *Ariyā*, those who have attained one of the *magga phala*. (*Saṅgha* means one who has removed “*saṅg*,” i.e., “*saṇ*” + “*gha*”).

“Suppaṭipanno bhagavato sāvakasaṅgho, ujuppaṭipanno bhagavato sāvakasaṅgho, ñāyappaṭipanno bhagavato sāvakasaṅgho, sāmīcippaṭipanno bhagavato sāvakasaṅgho yadidaṁ cattāri purisayugāni aṭṭha purisapuggalā, esa bhagavato sāvakasaṅgho āhuneyyo pāhuneyyo dakkhiṇeyyo añjalikaraṇīyo anuttaram puññakkhettaṁ lokassā’ti.

11. *Bhagavato savakasango* means Noble disciples of the Buddha. The first four phrases describe four Noble qualities: *Suppaṭipanno*, *ujuppaṭipanno*, *ñāyappaṭipanno*, and *sāmīcippaṭipanno*.

- *Paṭipanno* means “having such quality”: “*Su*” means goodness and morality; “*uju*” means straightforward and not crooked in character; “*nāya*” means *ñāṇa* or wise; “*sāmīci*” means pleasant to associate. Thus, it is easy to understand what those phrases mean. But as with all these qualities, it is not possible to describe them fully in words.

12. “*Yadidaṃ cattāri purisayugāni aṭṭha purisapuggalā*” means thus described eight types of persons (*aṭṭha purisapuggalā*) of four Noble (*purisa*) lineages. Eight types come when each stage is divided into two: e.g., *Arahant magga* and *Arahant phala*.

13. Then, starting with “*esa bhagavato sāvakaṣaṅgho*” (i.e., those Noble disciples of the Buddha), five more qualities are stated: *āhuneyyo pāhuneyyo dakkhiṇeyyo añjalikaraṇīyo anuttaraṃ puñṇakkhettaṃ lokassa*.

- In those words, “*neyyo*” means *niyama dhamma* or core principle of nature; also called “*nyāma*.” Then “*āhu*” means “grasped,” “*pāhu*” means “inseparable” or “fused together,” “*dakkhi*” means “see.” Thus those disciples have seen the core principles of nature (*paṭicca samuppāda*), have grasped them, and will not be separated from them ever.
- Because of that, they can dissolve and remove the causes (food) that fuel the *sansāric* journey: *añjalikaraneeyo*. Here “*an*” means “*āhāra*” or causes, “*jalī*” is water (dissolve), and *karaṇīyo* means “do.” Another meaning of “*an*” is “horn” with sharp tips (as in a bull), which can hurt others; here, *añjalikaraṇīyo* means dissolving them (by cultivating *Metta*) so that they cannot hurt others.
- *Anuttaraṃ puñṇakkhettaṃ*: *anuttara* is unmatched, *puñṇa* is meritorious, and *khetta* is for a field. Thus, these disciples are like fertile fields, that can provide unlimited resources to others (just like a well-cultivated field can provide food for many).

Here is a recital of the *Namaskaraya* by the Venerable Thero (you need to adjust volume control on your computer). It is normally recited three times:

15.4 The Five Precepts – Pañca Sila

Revised February 12, 2020

1. The five precepts (*pañca sīla*; pronounced “pancha seela”) are normally recited after paying homage to the Buddha (*Namaskāraya*), and then taking the refuge (*Tisarana*), i.e., one says nine times that one takes the refuge in the Buddha, Dhamma, and the Saṅgha. In the following they are combined, as customary; see the previous post for pronunciations and details.

- Even for a Buddhist, it is not necessary to recite the precepts.
- It is important to keep in mind that JUST BY RECITING PRECEPTS does not do anything to purify the mind. The Buddha said, “*Yam samādānaṃ taṃ vataṃ, Samvaraṭṭena sīlaṃ*,” or “reciting precepts is a ritual (“vata”), moral behavior is attained by seeing and controlling ‘san’.”
- However, it is good to recite *Namaskāraya*, *Tisarana*, and the precepts, to attain *citta pasāda* or calmness and joy of mind, especially before a formal meditation session. If one does it WITH UNDERSTANDING and RESOLVE, it can bring benefits.
- Furthermore, reciting precepts and *suttā* is preferred by those with developed *saddhā* (faith) *indriya*; see, “[Pañca Indriya and Pañca Bala – Five Faculties and Five Powers](#).” For those who lack *saddhā indriya*, this may be something they want to consider doing.

2. It is important to realize that the five precepts have deep meanings, and thus should not be taken lightly; see, “[The Five Precepts – What the Buddha Meant by Them](#).” The true meaning of the five precepts are discussed there.

- Only an *Arahant* is capable of strictly keeping those precepts (abstaining from all ten defilements or *dasa akusala*); **thus one needs to recite with the intention of doing one’s best to keep the precepts. Otherwise, we will be lying from the outset.**

Here a Venerable Thero is reciting the *Namaskāraya*, *Tisarana*, and the five precepts with the audience repeating them (volume adjustment on the right):

[WebLink: Listen to verse of: Pansil](#)

Here is a pdf file with the text and translation:

[WebLink: PDF File: Pañca Sīla \(click to open\)](#)

3. To emphasize, these English translations are the conventional (“*padaparama*”) or mundane ones and the real meanings are discussed in “[The Five Precepts – What the Buddha Meant by Them](#).” Also, while reciting, one needs to keep in mind that one is promising to do one’s best to keep the precepts.

15.5 Sutta Chanting (with Pali Text)

Revised August 14, 2016: Added more *suttā* at the end.

Following are recordings of three popular *suttā* by a Venerable Thero and the corresponding Pāli texts. At some point, I will make English translations. Most existing translations provide only the mundane (“*padaparama*”) meanings.

Please note that a few *suttā* are translated and discussed in the section “[Sutta Interpretations](#).”

1. Karaniya Metta Sutta (volume adjustment on the right):

15.6 Sādhū – Symbolizes Purified Hadaya Vatthu (Mind)

Revised February 21, 2019

1. It is customary to say “*Sādhū! Sādhū! Sādhū!*” before and after reciting precepts, a meditation session, chanting sutta, or a meritorious act (by oneself or another). Since anything is done for a purpose in Buddha Dhamma, it is good to understand why it is done.

- *Sādhū* comes from “*sa*” and “*hadaya*” or a purified heart (not the physical heart, but the *hadaya vatthu* where thoughts arise).

2. It is important to realize that our minds are associated with the *hadaya vatthu*, which is in the *manomaya kāya* and is aligned close to the physical heart; see, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#)” This is why in a traumatic or joyful event we feel it in the heart, and not in the brain. Brain is like a computer, and when it is overworked, it causes headaches. But our feelings of love, hate etc. are felt close to the physical heart, in the *hadaya vatthu*.

How is one’s heart (and mind) purified?

- “*Kāyena sanvaro sādhu, sādhu vācaya sanvaro; manasā sanvaro sādhu, sādhu sabbatta sanvaro*”
- “The heart is purified via moral discipline; one needs to act, speak, and think morally”

Thus when a meritorious deed is done by oneself or another, it is customary to say, “*sādhu*”. It reinforces the “goodness” of the deed and one makes a determination to do more; the lightness of the heart can be felt if one does it with understanding.

3. Our hearts are darkened with greed, hate, and ignorance of *Tilakkhaṇa*. As we purify the mind, the darkness fades away and the “white light emerges”; it is like lighting a lamp gets rid of the darkness. Heart becomes joyful.

We get rid of greed, hate, and ignorance via staying away from the ten defilements:

- When we abstain from killing, stealing, and inappropriate conduct (including but not limited to sexual conduct), we are cultivating **moral discipline through bodily acts**.
- Abstinence from lying, vain talk, gossiping, and hateful speech leads to **moral discipline through speech**.
- When we forcefully control our bodily acts and speech, the mind will gradually calm down because we thus reduce *abhijjā* [*abhijjhā*] (strong greed) and *vyāpāda* (strong hate). Then we can cultivate *sammā diṭṭhi* via comprehending the *Tilakkhaṇa*; this leads to reduction of *micchā diṭṭhi* too (***abhijjā* [*abhijjhā*], *vyāpāda*, and *micchā diṭṭhi* are the three *akusala kamma* done with the mind**). This is the step-by-step procedure that is discussed in the [Bhāvanā \(meditation\)](#) section.

4. Thus we can see that by saying “*sādhu*” mindfully, what we are doing is to make a firm determination to get rid of the ten defilements (*dasa akusala*) and thus to purify the mind and heart. Or, we are agreeing with a good deed done by someone else, and share the merits of that deed.

5. Now, what is the significance of putting the open hands together when saying “*Sadhu!*”?

- The gesture that we make by opening the hands fully, putting them together, and bringing them close to the heart or top of head also signify this determination. “With all my heart I make a commitment”, or “this commitment stands above everything else”, or “I agree wholeheartedly”.

The strengthening of the fingers versus making a fist embody two basic characteristics of human nature.

- One makes a fist when hitting someone in anger. Also, someone caught doing a misdeed has clenched hands in addition to a bent posture (you have seen pictures of criminals being hauled off to jail in such timid postures).

- In contrast, open hands indicate “I have not aggressive intentions” as when putting up hands indicating one has no desire to fight. Furthermore, as you may have noticed, people when say “*Sādhū!*” normally have their backs straight too, especially if they are doing with a joyful mind.
6. As mentioned above, one can make a given meritorious deed much more powerful by doing it with joy and knowledge; such thoughts should be there during that act and also when saying “*Sādhū!*” at the beginning and end. The most potent *kusala citta* are done with “joy and understanding” (“a *somanassa-sahagata, ñāṇa-sampayutta citta*”; see, “[Javana of a Citta – Root of Mental Power](#)”).

XVI Dhammapada

- o “[Manopubbangamā Dhammā..](#)”
- o “[Sabba Pāpassa Akaranan....](#)”
- o “[Appamado Amata Padam....](#)”
- o “[Najajja Vasalo Hoti.....](#)”
- o “[Arogya Parama Labha..](#)”
- o “[Anicca vata Sankhara...](#)”
- o “[Attā Hi Attano Nātho](#)”

16.1 Manopubbaṅgamā Dhammā..

May 5, 2018; revised August 22, 2019; November 17, 2019; September 15, 2020; August 29, 2022 (added #6); November 10, 2022 (#6); January 3, 2023

“Manopubbaṅgamā Dhammā” encompasses the critical idea in Buddha Dhamma: That mind is the precursor to all living and non-living things in the world.

*Mano pubbaṅgamā dhammā,
mano seṭṭhā manomayā;
manasā ce paduṭṭhena,
bhāsatī vā karoti vā;
tato naṃ dukkhamanveti,
cakkam va vahato padam.*

*Mano pubbaṅgamā dhammā,
mano seṭṭhā manomayā;
manasā ce pasannena,
bhāsatī vā karoti vā;
tato naṃ sukhamanveti,
chāyā va anapāyini.*

(Dhammapada verses 1 and 2)

1. These two verses encompass the critical idea in Buddha Dhamma: That mind is at the forefront. This whole world is made of the mind and has the mind as the basis for everything.

- *Mano* is, of course, the mind. **Dhammā** (plural, not Buddha Dhamma) are the **energies** the mind generates (via *javana* power.) **Dhammā** means “to bear,” meaning “everything arises due to **Dhammā**.”
- Those *dhammā* then **give rise to everything (all phenomena) in this world** – whether living or inert.
- *Pubbaṅgama* (*pubba* + *aṅga*) means what comes first. The first line (in both verses) says the mind creates all *dhammā* that give rise to everything in this world. The second line says, everything is prepared (*seṭṭhā*) and manifests in mind (*manomayā*).
- The mind creates those **Dhammā** with thoughts (*saṅkhāra*.) That requires a lengthy explanation that can go to profound levels: “[Kamma and Paṭicca Samuppāda](#),” “[Buddha Dhamma – A Scientific Approach](#)” and “[Worldview of the Buddha](#).”

2. Depending on whether one speaks (*bhāsatī*) and acts (*karoti*) with a defiled (*padutta*) or a pleasant (*pasanna*) mind, those *dhammā* that are generated by the mind lead to (*tato naṃ*) suffering (*dukkhamanveti*), or happiness (*sukhamanveti*).

- In the case of a defiled mind (acting with *lobha*, *dosa*, *moha*), suffering will follow just as a wheel of a cart follows the footsteps of the ox pulling it (*cakkamva vahato padam*).
- In the case of a pleasant, moral mind (acting with *alobha*, *adosa*, *amoha*), happiness will follow one just as one’s shadow follows oneself (*chāyāva anapāyini*).

3. These two verses can be interpreted mundanely, as outlined in #2 above. Any given task with an un-defiled mind will always lead to a pleasant and joyous state of mind.

- There is a more in-depth interpretation. Thoughts, speech, and actions done with a defiled mind (*lobha*, *dosa*, *moha*) can lead to births in the *apāyā* and, thus, to a high degree of suffering. Those done with a pleasant mind (*alobha*, *adosa*, *amoha*) will lead to births in the “good realms,” and will eventually lead to *Nibbāna*, the end of all suffering.
- The first several subsections of the “[Origin of Life](#),” discuss viewpoints about the origin of life. That extensively discusses religious and scientific viewpoints and the Buddha’s worldview.

4. Now, we can loosely translate the two verses as follows:

- All phenomena have the mind as their forerunner; they all are mind-made. If one speaks or acts with an evil mind (i.e., engages in *dasa akusala*), then suffering (**dukkha**) will follow just as the wheels of a cart follow the footsteps of the ox pulling the cart.

- All phenomena have the mind as their forerunner; they all are mind-made. If one speaks or acts with a purified mind (i.e., engages in *dasa kusala* and *puñña kamma*), happiness (*sukha*) follows one like one's own shadow. That is the source of “*nirāmisā sukha*,” which eventually leads to *Nibbāna*.

5. I found a youtube video with the Pāli recital; it may take a minute to download. The two verses start respectively at 0.30 and 2.18 minutes:

[WebLink: Youtube: Dhammapada - Yamaka Vaggo - Part 01](#)

6. Some scientists are beginning to realize that the mind could be the precursor to matter. See “[Matter Creates Mind or Mind Creates Matter?](#)“

- The mind creates matter, not the other way around: “[The Origin of Matter – Suddhatthaka.](#)”
- A detailed explanation is in the “[Origin of Life](#)” section.

16.2 Sabba Pāpassa Akaraṇaṃ....

Revised June 6, 2020; October 28, 2020

*“Sabba pāpassa akaraṇaṃ,
kusalassa upasampadā;
Sacitta pariyo dapaṇaṃ,
etaṃ Buddhānasāsaṇaṃ”*

(Dhammapada verse 183)

Let us see what is meant by the verse:

- *Sabba* = all; *pāpassa* = immoral deeds/speech/thoughts; *akarana* = (*a* + *karana*) = do not engaged in
- *kusalassa* = moral deeds/speech/thoughts; *upasampadā* = *upa* + *saṇ* + *padā* = sort out “*saṇ*” and embrace *kusala*; see, “[What is “Saṇ?”](#)”
- *sacitta* = *sa* + *citta* = one’s own thoughts; *pariyo dapaṇaṃ* = *pari* + *yo* + *dapaṇaṃ* = control at the onset (where “*dapaṇa*” means control and “*yo*” means origin and “*pari*” means around)
- *Buddha āṇa* = All Buddhas’ *niyama* or principle. Another meaning is *Buddha* + *anusāsana* = Buddha’s advice or his “doctrine.”

Note: The process of “cleansing the mind” is what this website is about. See, “[Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi](#)” and “[Living Dhamma](#).”

Therefore, we can summarize as follows:

“Discard all that is immoral, what should not be done

Take in what is moral by sorting out “*saṇ*.”

Do this by controlling one’s own thoughts (mind)

This is the doctrine of the Buddhas.”

Here is a recording of the verse recited by a Venerable *Thero*; it keeps repeating several times:[WebLink: Listen to verse of : Sabba pāpassa akaraṇaṃ](#)

When you click the “DOWNLOAD” button, it will open the file in a new window. Right-click on the screen and choose, “Save as..” to save the file to your computer.

[WebLink: PureDhamma: DOWNLOAD the recording of "Sabba-Pāpassa-Akaraṇaṃ"](#)Next, “[Appamado Amata Padam...](#)”,

16.3 Appamādo Amata Padam....

*Appamādo amata padam
pamādo maccuno padam
appamattā na meeyanthi
ye pamattā yathā matā.*

(Dhammapada verse Verse 21, Samavati Vatthu)

- *Appamāda* is “doing without delay” and *pamāda* is being delayed.
- *Mata* (pronounced “matha”) is death, and *amata* is deathless, another word for *Nibbāna*. *Maccuno* (pronounced “machchuno”) is also death, so is *meeyanthi*.
- *Pada* means “word” (most of these words are also Sinhala words).
- *Appamattā* is one who is not delayed, *pamattā* is one who is delayed.
- *Yathā* is “true status”.

Now we can extract the MEANING of the verse as:

Hastening is a “deathless word”

Delay is a “death sentence”

One who makes haste attains the deathless status

One who negligent is like already dead

1. Thus someone who is delayed in seeking *Nibbāna* (either due to not knowing Buddha Dhamma or just procrastinates in following the Path) is like a dead person even while living. He/she will be facing innumerable deaths in the future.

- But someone who strives and attains *Nibbāna* has already reached the “deathless state”. Because after attaining *Nibbāna*, all future deaths are stopped: No more future rebirths and thus no more deaths.
- One actually attains the “deathless state” when one becomes one of the 8 Noble Persons (*attha purisa puggala*). This is because once one becomes an *Ariya* (Noble Person), one will never lose it, and will never be born in an *apāya*. Thus one can be said to “born” as an *Ariya*, when one becomes a *Sotāpanna Anugāmi*; see, [“Sotāpanna Anugāmi – No More Births in the Apāyā.”](#)

2. There are two reasons for the urgency:

- a. The time of death is unpredictable. Even a young, healthy person may die via an accident or other unforeseeable cause.
- b. As we get old, our brains start to degrade and thus our minds will not be able to grasp the Dhamma.

3. Many Buddhists that I know say they want to “enjoy life while young” and then start focusing on *Nibbāna* at old age long after retirement. But one may not reach the old age, and even if did, the mind may not be able to grasp the deep message of the Buddha.

- Most people come to the conclusion of postponing practice, because they think attaining *Nibbāna* (or the *Sotāpanna* stage) is a mere act of following some rituals that can be done at any time. This would be a big mistake. The *Sotāpanna* stage is reached via comprehending the true nature of this world, *anicca*, *dukkha*, *anatta*, and that needs a sharp mind and a lot of contemplation.

4. The Buddha was once traveling with some *bhikkhus* and they saw an old beggar couple. The Buddha told the *bhikkhus* that the man’s name was Mahādāna (meaning rich), and he was indeed a very rich person, and the woman was his wife; they both were of “tithetuka birth”, i.e., they were born due to a very potent good kamma (done with all three good roots of non-greed, non-hate, and wisdom) from a previous life.

- Thus, the Buddha said, if they started on the Path when they were very young, the man could have become an *Arahant* and the woman an *Anāgāmī*; if they started when they were young (20's), they could have become *Anāgāmī/Sakadāgāmī*, and if they started on the Path in the middle age they could have attained *Sakadāgāmī/Sotāpanna* stages. Instead, they lived a very lavish life, wasted their wealth, and became beggars. Now they were too old to comprehend anything.
- It is unfortunate to see many people today postponing the practice to their “old age”. It is a good idea to start early and at least keep a slow pace.
- There are four factors that contribute to the capability of attaining *Nibbāna*: *Āyu* (age), *vaṇṇa* (lively), *sukha* (comfort), *bala* (ability.) These are due to past *puñña kamma*. See #13 of “[Kanha \(Dark\) and Sukka \(Bright\) Kamma and Kammakkhaya.](#)”
- Some people may have sufficient *vaṇṇa* and *bala* even at a very old age. Thus a normal person cannot look at a given old person and say, “this person seems too old to attain *Nibbāna*”. Only a Buddha can determine whether a person is too old to grasp the Dhamma. Yet, in general, as one becomes older the brain gets weaker.

5. Here is a recording of the verse recited by a Venerable *Thero*:

16.4 Na Jacca Vasalo Hoti.....

Revised May 2, 2020

*“Na jaccā vasalo hoti, na jaccā hoti brāhmano**Kammanā vasalo hoti, kammanā hoti brāhmano”****(Vasala Sutta, Sutta Nipāta 1.7)***

When I started writing this post, I erroneously assumed that the above verse is from *Dhammapada*. But it turned out that it is actually from the *Vasala sutta*. (It is the last verse of the *Sutta*.) However, I decided to put the post in the *Dhammapada* section. It is a succinct verse providing insight into the core message of the Buddha.

Let us look at the meaning of different key terms:

- “Ja” means birth and “jaccā” means “by birth” or “related to birth”.
- “Vasala” (or “vasalaya” in Sinhala) is a derogatory term identifying someone as an “unworthy” person. Not merely “useless” but “someone not to be associated with”, as if the person has a communicable disease. Even today, there are such “untouchables” in India even though their conditions have improved since 1995: [WebLink: WIKI: Dalit](#).
- In those days, a *Brahmin* was supposed to be the opposite of a *vasalaya*, having the highest social rank. Of the 31 realms of existence, *Brahmā* live the highest 20 realms. They have the highest level of mental states (greedy or hateful thoughts normally do not arise in them.) Thus a *Brahmin* (who lives like a *Brahma*) is supposed to be of the highest moral values.
- *Kamma* is of course action, and *kammunā* means according to one’s actions.

So, the meaning of the verse is clear:

“It is not the birth that makes a noble person or an ignoble person, but it is one’s actions (the way one lives one’s life) that determines whether one is a noble person or an ignoble person”.

- Here one could substitute a Noble Person with a *Brahmin* and ignoble person with an untouchable, AND that does not come about by birth but by one’s moral values.

We can make the following deductions using Buddha Dhamma:

- One is determined to be a Noble Person not by birth but by one’s character.
- One can change from being an ignoble person to a noble person and even a Noble Person (*Ariya*) by changing one’s character (*gathi*). There are several posts on how to change habits; use the “Search” box on right to find the posts (just search for “habit” or “*gathi*”). This search box is a good resource to find relevant posts using a keyword.
- Sometimes a noble person can change to an ignoble person too, but a Noble Person (*Ariya*) never (even in future lives) changes to an ignoble person.
- Some people are very high-minded because of their birth, wealth, beauty, fame, among many other possibilities. But we need to be always aware of the fact that we have been born much worse than even the poorest human. We all have been born animals and worse. There is no reason to be high-minded for a span of 100 years in a rebirth process that has no beginning!
- Contemplating on the “bigger world view” with the 31 realms (with four realms of much suffering) can make one humble, and be compassionate; see, “[Implications of the Rebirth Process in Daily Life and Society](#).” During the hard-to-comprehend time scale of *samsāra*, we have been born in almost all of the 31 realms, good and bad.
- Also, we need to remember that even a lowly worm may have a potent *kamma* seed that could make it in its next life a king. (Even though chances are extremely low.) See, “[How to Evaluate Weights of](#)

Different Kamma“), and if we do not act with wisdom we could have a rebirth worse than a worm. Actually, high-mindedness (*uddhacca*; pronounced uddachcha) can make one be born in a lower realm.

16.5 Ārogya Paramā Lābhā..

Revised September 27, 2017; revised January 30, 2019; April 18, 2020; June 28, 2020; June 14, 2022

*Ārogya paramā lābhā
Santutṭhiparamam dhanam
vissāsa paramā ñāti
Nibbānam paramam sukham*

(Dhammapada verse 204)

Here is a recital by the Venerable Thero:

[WebLink: Listen to Venerable Thero recital](#)

1. As with many Dhammapada verses (and *sutta* interpretations), the conventional (or “*padaparama*”) interpretation is the one that is widely known, which goes as: **“Health is the ultimate profit, happiness is the ultimate wealth, a trusted friend is the best relative, Nibbāna is the ultimate bliss”**.

- The deeper meaning remains hidden for many. In some hospitals in Sri Lanka, the verse, “*Ārogya Paramā Lābhā*” is displayed in big letters to emphasize the benefits of being healthy.
- While it is good to abide by those conventional meanings while we live this life, we should also try to grasp the deeper meanings to embark on the Noble Eightfold Path; see, “[Buddha Dhamma in Chart](#)” and “[What is Unique in Buddha Dhamma](#).”

2. First “*parama*” means “ultimate” or “prominent”. By the way, the word “*padaparama*” above means the interpretation that makes the “conventional meaning of a word prominent”; “*pada*” is “word”. Now let us look at the other words in the verse.

3. “*Roga*” means “disease”, so *ārogya* means not subject to disease. The bodies of all beings below the *Deva lokā* (human and below) are subject to disease. We cannot remove the possibility of disease until we remove causes for us to be reborn in the human realm or the lowest four realms, i.e., attain the *Sakadāgāmī* stage of *Nibbāna*. [*ārogya* : [nt.] health.]

- “*Lābha*” is “profit”. **The ultimate profit (better than any amount of wealth) of “disease-free” status is attained at the *Sakadāgāmī* stage of *Nibbāna*.**

4. “*Santutṭhi*” comes from “*saṇ*” + “*tuṭṭhi*.” Here “*tuṭṭhi*” is “joy” and *santutṭhi* is the joy achieved by removing “*san*.” *Santutṭhi* and the more common Sinhala word “*santhosa*” means happy. When one removes “*saṇ*,” one gains the *nirāmisa sukha* of *Nibbāna* or “cooling down”.

- “*Dhanam*” means “wealth”; the Sinhala word is “*dhanaya*.” **Thus ultimate wealth is achieved by getting rid of “*saṇ*” or defilements of greed, hate, and ignorance; see, “[What is “Saṇ”?](#)”**

5. “*Vissāsa*” comes from “*vis*” + “*āsā*”, where “*āsā*” means “*āsava*” or cravings. Thus it means getting rid of cravings that make one bound to the *samsāra* (round of rebirths).

- “*Ñāti*” means “relative.” **Thus ultimate relative or refuge is reached via giving up the cravings for worldly things.**

6. The last one, *Nibbanam paramam sukham*, or “***Nibbāna is the ultimate bliss***” is the only one that has the same meaning as the conventional or “*padaparama*” version in #1 above.

- Therefore, when one embarks on the *Sotāpanna magga*, one should be able to understand the correct version.

7. Buddha dhamma has no language, cultural, or social barriers. But the Buddha advised never to translate *Tipiṭaka* to any language, particularly to Sanskrit, because the meanings of certain words can get distorted; see, “[Preservation of the Dhamma](#).”

- It is ironic that this is exactly what has happened during the past 1500 years or so, at least since Buddhaghosa wrote *Visuddhimagga*, probably even earlier. The most damaging is the replacement of the Pāli words *anicca* and *anatta* with the Sanskrit words *anitya* and *anātma*. The latter is likely to have happened more recently. See, “[Misinterpretation of Anicca and Anatta by Early European Scholars](#).”
- On the other hand, the Buddha also advised that what really matters is to get the “meaning of a given word or phrase across”. He said to use the words and phrases (and examples) appropriate for a given locale to convey the MEANINGS of these key Pāli words. While we should keep the *Tipiṭaka* intact in Pāli, we should interpret its content in a way that is most conducive to getting the ideas across depending on the audience.
- The correct way to interpret the *Tipiṭaka* material is outlined in “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).”

8. It is interesting to note that this verse was a popular one among the *Vedic Brahmins* of the day of the Buddha. In the [WebLink: suttacentral: Māgandhiya sutta \(MN 75\)](#), it is described how Māgandhiya *brahmin* tells the Buddha that his teacher also taught him the same verse. When the Buddha asked him to explain the meaning that his teacher taught him, Māgandhiya gave the same interpretation that was given in #1 above.

- The Buddha told Māgandhiya that this *gāthā* (verse) came to the *Vedic* literature from the previous Buddha (Buddha Kassapa,) whose Buddha *Sāsana* had since disappeared: “***Pubbakehesā, māgaṇḍiya, arahantehi sammāsambuddhehi gāthā bhāsītā.***”
- It is important to note that there had been three Buddhas before Buddha Gotama in this *mahā kappa*, and there will be another, Maithree Buddha, in the future after the present Buddha *Sāsana* disappears in about 2500 years.
- This is why only “conventional meanings” of pure Dhamma survive when *Ariyā* (Noble Persons) who can correctly interpret the deep meanings in the *suttā* and verses like this are absent for a long time in this world. Either a Noble Person or a Buddha has to be born to bring back the true meanings.
- This is exactly what has happened during the past hundreds of years, where true meanings of many keywords like *anicca*, *dukkha*, *anatta*, *Paṭicca Samuppāda*, and *Ānāpānasati Bhāvanā*, have been not known. See, “[Anicca, Dukkha, Anatta – Wrong Interpretations](#).”

9. For those who like to dig deeper into *Tipiṭaka*, the “[WebLink: suttacentral: Santuṭṭha Sutta \(SN 16.1\)](#)” clearly illustrates that “*santuṭṭha*” is with one who lives a simple life, with minimal cravings, as **Ven. Kassapa** did: “..***Santuṭṭhāyaṃ, bhikkhave, kassapo itarītareṇa cīvareṇa, itarītaracīvarasantuṭṭhiyā ca vaṇṇavādī; na ca cīvarahetu anesanāṃ appatirūpaṃ āpajjati; aladdhā ca cīvaraṃ na paritassati; laddhā ca cīvaraṃ agadhito amucchito anajjhāpanno ādīnavadassāvī nissaraṇapaṇṇo paribhuñjati.***”

- The [WebLink: suttacentral: English](#) and [WebLink: suttacentral: Sinhala](#) translations at the Sutta Central site are correct, for this *sutta*.

16.6 **Anicca vata Saṅkhārā...**

Revised August 16, 2019; February 25, 2020; June 8, 2020; December 21, 2020

*Aniccā vata saṅkhārā**Uppāda vaya dhammino**Uppajjitvā nirujjhanti**Tesaṃ vūpa samo sukho**(Mahā Parinibbāna Sutta)*

This verse is not in the Dhammapada, but it is a very common verse. In Sri Lanka (and possibly in other Buddhist countries), it is displayed at funerals to emphasize the “fleeting nature” of life. It has a deep meaning and explains why we face sorrow inevitably (because death is inevitable). We generate our future rebirths via our own (*abhi*)saṅkhārā! We need to stop creating *abhisāṅkhārā* (with *lobha*, *dosa*, *moha*) to attain the *Nibbānic* bliss.

- This verse was uttered by Sakka, the King of the *Devas*, just after the *Parinibbāna* (passing away) of the Buddha. It is in the *Mahā Parinibbāna Sutta* (DN 16) and also in a short sutta: “[WebLink: suttacentral: Parinibbāna Sutta \(SN 6.15\)](#).”

A common and incorrect translation is:

- All things are impermanent
- They arise and pass away
- Having arisen they come to an end
- Their coming to peace is bliss

Let us examine the correct interpretation of the verse.

1. *Anicca* is, of course “cannot be maintained to our satisfaction.” It is NOT just impermanence, because even permanent things (relative to our lifetime) cannot be maintained to our satisfaction; see, “[Anicca, Dukkha, Anatta – Wrong Interpretations](#).”

Vata (pronounced as “vatha”) here means “surely” or “indeed.”

(There are other meaning for “*vata*”: In the verse, “*yaṃ samādānaṃ taṃ vataṃ. Sanvaraṭṭena sīlaṃ*,” or “reciting precepts is a **ritual**, moral behavior, or *sīla*, is attained by controlling “*san*.” Thus, there “*vata*” means ritual. Another meaning is “**action**.” One needs to pick the right meaning for the given situation).

We think, speak, and take actions based on our *mano*, *vacī*, and *kāya saṅkhāra*. They are all thoughts (we cannot even lift a finger without an associated thinking). Those *saṅkhāra* lead to *viññāṇa* via “*saṅkhāra paccayā viññāṇa*” in *Paṭicca Samuppāda*. Strong *viññāṇa* produced via “*abhisāṅkhāra*” (or strong *saṅkhāra*) lead to future rebirths. But all births end up in death. See, “[Saṅkhāra – What It Really Means](#)” and “[Saṅkhāra, Kamma, Kamma Bija, Kamma Vipāka](#).”

- Thus the first line implies that any rebirth (which inevitably arises due to our *abhisāṅkhāra* cannot be maintained to our satisfaction. Any birth ends up in death and suffering.

2. *Uppāda* means to arise, and *vaya* means that arising can be stopped.

- But we can stop those things that lead to suffering to come into existence by stopping *saṅkhāra* from arising. That is *vaya*. That is the ultimate message embedded in Buddha Dhamma. *Dhammino* (or *dhammathā*) means the “Nature’s way.”

- Thus the second line says, “those *saṅkhāra* are types of *dhammā* that can be stopped from arising,” i.e., they are “*vaya dhammā*.” That is also stated in another famous verse, “*vaya dhammā saṅkhārā*.”
- The Buddha attained *Parinibbāna* (i.e., end of rebirth) because he was able to figure out how to stop *saṅkhāra* from arising (via removal of *avijjā*.)

3. *Uppajjivā* means that which comes to existence (due to *saṅkhāra*.) Those things that come to existence in this world lead to suffering.

- *Nirujja* means those things will thus not arise anymore (by stopping *saṅkhāra* from arising.)

4. *Te* means “those,” and thus “*tesaṃ*” (“*te*” + “*saṃ*”) means those (three) “*saṃ*” or *lobha*, *dosa*, *moha*; see, “[What is “Saṃ”?](#).”

vūpa sama means “remove and get to *samādhi*.” In the *Paṭisambhidā Magga Pakaraṇa* (*Jhāna Vibhaṅga* section) on p. 55, it explains that, “*vitakkavicārānaṃ vūpasamā*” means “getting rid of *vitakka* and *vicāra* and attaining *savitakka*, *savicāra*.” See, “[Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra](#).” *Sukha* is happiness.

- Thus the fourth line says, “by removing *lobha*, *dosa*, *moha* (three bad “*saṃ*”s) from our minds; we can reach (the ultimate) happiness or *Nibbāna*.”

Here is a recording of the verse by the Venerable *Thero* (repeated three times; note the volume control on the right):

[WebLink: Listen to verse of: Anichchavatha sankara](#)

- This verse is a very good *kammaṭṭhāna* (meditation subject) for cultivating the “*anicca saññā*.” One could recite the verse and contemplate its meaning. Think about all those loved ones who passed away and led to much suffering. And one’s death is also inevitable.
- We have been through this process in perpetuity, being distressed as loved ones are lost and also thinking about one’s own demise, at every birth.
- But there is a way to stop this suffering, by following the Path and stopping *saṅkhāra* from arising.
- Thus, instead of getting depressed about the inevitability of death, one WILL start feeling better if one can really cultivate the “*anicca saññā*”; see, “[How to Cultivate the Anicca Saññā](#).”
- This *kammaṭṭhāna* will also cultivate the “*udayavaya ñāṇa*” or “the knowledge about arising and stopping the arising of a *saṅkhata*.” See, “[Udayavaya Ñāṇa](#).”

16.7 Attā Hi Attano Nātho

March 4, 2017; revised November 13, 2018; October 25, 2019; February 15, 2021; July 14, 2022

*“Attā hi attano nātho
ko hi nātho paro siyā
attanā hi sudantena
nātham labhati dullabham”*

(Dhammapada verse 160)

1. This is an important verse where the word “*atta/attā*” (pronounced “aththa”/“aththā”) is used with two very different meanings in two places within the same verse.

- In the conventional sense, “*attā*” means “a person”.
- The other meaning of “*attā*” is “one’s soul.” The Buddha denied the existence of a soul.
- Depending on the context, one needs to pick the correct meaning. There is no negation for “*attā*” with those two meanings.
- On the other hand, “*atta*” (without the long “a”) means “fruitful.” The opposite of that is “*anatta*” or “unfruitful.”

2. When one attains the true “*atta*” state (*Nibbāna*), one has become “*nātha*” or “*sanātha*” or “found refuge or salvation”. As long as one remains in the 31 realms (this world), one is “*anātha*” (which is the opposite of “*sanātha*”) or “helpless”. See, “[WebLink: suttacentral: Pathama Nātha Sutta \(AN 10.17\)](#).”

- “*Attano nātho*” means “the refuge is within oneself.” Thus, “*Attā hi attano nātho*” means “one’s refuge is within oneself.”
- “*paro siyā*” means “outside oneself.” Thus “*ko hi nātho paro siyā*” means “how can one find refuge outside oneself”?
- “*Sudda*” means “clean.” Thus, “*attanā hi sudantena*” means (by cleansing one’s own (mind))
- *Labhati* means get, *dullabham* means rare, and as we saw above “*nātha*” is attaining *Nibbāna*. So, *nātham labhati dullabham* means “it is not easy to get to salvation (*Nibbāna*)”.

Therefore, we can translate the verse as follows:

“One is one’s own refuge
how can another be a refuge to one?
(one reaches salvation) by purifying one’s own mind
getting to the refuge (*Nibbāna*) is rare”

Here is a recording of the verse recited by me (I could not find a recording by Venerable Waharaka Thero):

 [WebLink: Play Dhammapada verse 160](#)

A detailed discussion on “*atta/attā*” is given in the posts, “[Pāli Dictionaries – Are They Reliable?](#)” and “[Anatta – the Opposite of Which Atta?](#)”

October 25, 2019: *Attā* is used as “a person” in many of the verses in the “[WebLink: suttacentral: Attavagga](#)” of the Dhammapada.

17.1 Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa

Revised April 10, 2017; August 28, 2018; January 7, 2019; December 8, 2020; revised April 15, 2021, with the new title. revised March 1, 2022; rewritten February 9, 2023

[Old Title: Sutta Introduction; New Title: Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa]

Explanation of *dhamma* concepts in the *Tipiṭaka* comes under three categories: “*uddesa, niddesa, paṭiniddesa*.” One should not translate the *uddesa* version directly from Pāli to other languages.

Word-by-Word Translations Lead to Confusion

1. Many *suttās* are in the “*uddesa*” or “utterance” form; see #2 below. The word-for-word translation of such *suttās* can lead to utter confusion. Keywords like *viññāṇa*, and *saṅkhāra* have different meanings depending on the context.

- Most *suttās* only give only the *uddesa* form of the *Paṭiloma* (reverse) *Paṭicca Samuppāda*, for example, “*avijjā nirodhā.. viññāṇa nirodho*.” If that is translated word-by-word as “**when ignorance ceases,. . consciousness ceases,**” that leads to utter confusion. Did the Buddha lose consciousness upon attaining Enlightenment? Would an *Arahant* lose consciousness upon attaining *Arahanthood*? That is the danger of direct word-for-word translations! Not only that, those direct translations say sensory contacts, and *vedanā*, also stop arsing with the cessation of *avijjā*! See, for example, “[WebLink: suttacentral.net: Paticcasamuppāda Sutta \(SN 12.1\)](http://WebLink:suttacentral.net:PaticcasamuppādaSutta(SN12.1)).”
- Many terms in *Paṭicca Samuppāda* (*saṅkhāra, viññāṇa, phassa, vedanā*) need to be explained in detail. Many online discussions illustrate the confusion: “[WebLink: dhammawheel.com: Do Arhats experience contact with their sixfold sense media? What about vedanā?](http://WebLink:dhammawheel.com:DoArhatsexperiencecontactwiththeirsixfoldsensemedia?Whataboutvedanā?)” “[WebLink: discourse.suttacentral.net: Cessation of DO?](http://WebLink:discourse.suttacentral.net:CessationofDO?)” and “[WebLink: dhammawheel.com: Vedana](http://WebLink:dhammawheel.com:Vedana)” are just a few examples.
- I discussed that problem in “[Distortion of Pāli Keywords in Paṭicca Samuppāda](#).”

Dhamma Concepts Explained at Three Levels

2. Explanation of *dhamma* concepts in the *Tipiṭaka* comes under three categories: “*uddesa, niddesa, paṭiniddesa*.” A fundamental concept is first stated (“*uddesa*” or “utterance”). “*Niddesa*” is a “brief explanation”. Finally, “*paṭiniddesa*” explains in detail with examples to clarify complex or “knotty” points.

[*uddesa* : [fr. uddisati] -- 1. pointing out, setting forth, proposition, exposition, indication, programme M. III, 223 (u. uddiṭṭha), 239; S. IV, 299; SnA 422. -- 2. explanation S. V, 110 sq. ; sa-uddesa (adj.) with (the necessary) expln. , point by point, in detail, D. I, 13, 81; III, 111; A. III, 418; It. 99; Nd2 6171. -- 3. samaṇuddesa one marked as a Samaṇa, a novice (cp. sāmaṇera) D. I, 151; M. III, 128; A. IV, 343; uddesa-bhatta special or specified food Vin. I, 58 = 96, cp. II. 175, propounding, recitation, repetition.

niddesa : [m.] description; analytic explanation.]

- For example, “*ye dhammā hetuppabbavā.Tesaṃ hetuṃ tathāgato āha; Tesaṃca yo nirodho, Evaṃvādī mahāsamaṇo*” is the **uddesa version**.
- In English, the *uddesa* version is: “Of those phenomena which arise from causes. Those causes have been taught by the *Tathāgata* (Buddha), And their cessation too – thus proclaims the Great Ascetic.”
- The fundamental characteristics of “this world” state that everything arises due to causes. But that explanation is not enough to understand the embedded deep concepts. Upatissa (who later became Ven. Sāriputta) attained the *Sotāpanna* stage by hearing that *uddesa* version from Ven. Assaji. See “[Ye Dhammā Hetuppabbavā.. and Yam Kiñci Samudaya Dhammam.](#)”

3. Therefore, word-for-word translation is NOT enough to convey the teachings of the Buddha to an average person.

- The next level of explanation is the **“niddesa” version**. A teacher must explain that “*dhammā*” here refers to the *kammic* energies created by the three root causes (*hetu*): *lobha*, *dosa*, and *moha*. Cessation of *avijjā* (ignorance of the Four Noble Truths) leads to eliminating those root causes and thus to *Nibbāna*.
- Clarification of each term in *Paṭicca Samuppāda* (*avijjā*, *saṅkhāra*, *viññāna*, *nāmarūpa*,” leading to “*upādāna*, *bhava*, *jāti*, and suffering), requires long explanations with examples. That is the **paṭiniddesa explanation**.

4. Some sections of the *Tiṭṭaka* have an explicit **niddesa** version. However, that is mainly in the Original commentaries that explain certain concepts in SOME detail.

- For example, the correct *Ānāpānasati* and *Paṭicca Samuppāda* are discussed in detail in “[WebLink: suttacentral.net: Ānāpānassatikathā](http://suttacentral.net:Ānāpānassatikathā) (KN Ps 1.3),” and “[WebLink: suttacentral.net: Paṭiccasamuppādavibhaṅga](http://suttacentral.net:Paṭiccasamuppādavibhaṅga) (Abhidhamma Vb 6).”

Paṭiniddesa (Detailed Explanation) in Commentaries and Discourses

5. During the Buddha's time, other *bhikkhus* explained each *sutta* in detail to audiences when they delivered discourses. That is the “*paṭiniddesa*” version. Especially after the Buddha's *Parinibbāna*, **many Arahants started composing “Attakathā” or commentaries on fundamental concepts. But a few were composed during the time of the Buddha.** Of course, these were also composed in a way suitable for oral transmission and, thus, do not have lengthy explanations.

- Three original early commentaries remain preserved in the *Tiṭṭaka*: *Paṭisambhidhā Magga Prakaraṇa*, *Nettiparakaraṇa*, and *Petaṇṇapadesa*. Of these, the *Paṭisambhidhā Magga Prakaraṇa* consists of the analyses by Ven. Sāriputta, one of the chief disciples of the Buddha, and the *Nettiparakaraṇa* by Ven. Mahā Kaccāyana. Thus we are lucky to have these three original commentaries still with us.
- These three books contain “*niddesa/paṭiniddesa*” versions of many essential *suttā*, which describe the keywords/phrases in a given *sutta*. Other excellent commentaries have been lost; see “[Incorrect Theravada Interpretations – Historical Timeline](#)” and “[Buddhaghosa and Visuddhimagga – Historical Background](#).”

Most People Today Need Paṭiniddesa (Detailed Explanation)

6. During the time of the Buddha, some could comprehend just the *uddesa* version. For example, Upatissa and Kolita (who became Ven. Sāriputta and Ven. Moggallāna later) became *Sotāpannas* upon hearing the verse, “*ye Dhamma hetupabbhavā....*”. They had done much in their past lives and needed “just a little push” to complete that understanding. They are called *ugghaṭitañña* or “persons with high wisdom.”

- And many could understand the *niddesa* version. Those were *vipaṇcitañña* and needed a bit more explanation to grasp the concepts. “[WebLink: suttacentral: Ugghaṭitaññī Sutta](http://suttacentral.net:Ugghaṭitaññī Sutta) (AN 4.133)” discusses the four categories of persons — *ugghaṭitañña*, *vipaṇcitañña*, *neyya*, and *padaparama*.
- However, most people today are in the lower category of *neyya* and *padaparama*. They need detailed explanations (i.e., *paṭiniddesa*) to grasp a concept. They also belong to two groups. Those with *tihetuka paṭisandhi* (optimum births) can attain *magga phala* in this life. But those with *dvihetuka paṭisandhi* (inferior births) cannot achieve *magga phala* but can accrue merits to attain *magga phala* in future lives. Of course, there is no way for anyone to figure out (except for a Buddha) whether a particular person has a *tihetuka* or *dvihetuka paṭisandhi*.
- **It is essential to realize that those who are either *ugghaṭitañña* or *vipaṇcitañña* had been *neyya* and *padaparama* persons in previous lives.** They had strived to gain more wisdom and now benefitting from this life. Thus there is no point worrying about whether one is a *tihetuka* or *dvihetuka*. This is the concept of “*pāramitā*”; see “[Pāramitā and Niyata Vivaraṇa – Myths or Realities?](#)”

Erroneous Commentaries Are Harmful

7. There are many erroneous commentaries today. The best example is the *Visuddhimagga* of *Buddhaghosa*. It was written around 400 CE (where CE is “Current Era” or AD) when the “pure Dhamma” was already lost, and the conventional meanings were commonplace, just as now.

- The “pure Dhamma” has been lost for an extended period from about 200 CE up to now. See [“Incorrect Theravāda Interpretations – Historical Timeline.”](#) But the original *suttā* survived because people at least used and preserved them even if they used the “conventional” or “mundane” (“*padaparama*” in Pāli) meanings.
- Thus we can see why people have been translating *suttā* “word for word” and just getting the conventional meanings. But it can also lead to contradictions and confusion, as we saw above. Profound verses in *suttā* need detailed explanations.

Many *Suttā* Are in *Uddesa* or *Niddesa* Versions

8. Most *suttā* are in *uddesa* or *niddesa* versions (*Dīgha Nikāya* is an exception, even though some verses do have deeper meanings). They require detailed explanations. **Translating word-by-word is not appropriate in many instances.**

- For example, “*anicca, dukkha, anatta*” is only in the *niddesa* version in *Dhamma Cakka Pavattana Sutta* and *Anatta Lakkhana Sutta*. [[SN 56.11 Rolling Forth the Wheel of Dhamma – Dhammacakkappavattanasutta](#), [SN 22.59 The Characteristic of Anatta – Anattalakkhanasutta](#)]
- However, each *sutta* took many hours to deliver. It was impossible to condense all that information in a *sutta* for primarily oral transmission that was available at the time. Each *sutta* is condensed (most likely by the Buddha himself; see below).

Tipiṭaka Was Compiled for Faithful Oral Transmission

9. The Buddha knew that Buddha Dhamma would go through periods of decline where *bhikkhus* capable of interpreting deep *suttā* would not be present. Thus *suttā* were composed so that only the “conventional” meaning was apparent. **That was necessary to preserve the *suttā*, especially before writing became commonplace.**

- It is important to remember that Ven. Ānanda had memorized all the *suttā* that he recited at the First Buddhist Council, just three months after Buddha’s *Parinibbāna*. They are in a format suitable for oral transmission.
- Ven. Ānanda was Buddha’s assistant over the last few decades of the Buddha’s life. I believe that the Buddha condensed each *sutta* and Ven. Ānanda memorized them. The Buddha synthesized each *sutta* in a “double meaning” way for them to survive the “dark periods.” That part is my theory, and I believe it will be proven accurate.
- Then, at the first Buddhist Council, all the *suttā* were recited and sorted into various categories (*Nikāyās*). The Vinaya Piṭaka was also completed.
- The *Abhidhamma Piṭaka* was started at the First Council but finalized at the Third. Having learned *Abhidhamma* from the Buddha, Ven. Sāriputta taught it to his 500 student-*bhikkhus*. They had to expand that summary to the form we have in seven books today. That task was completed only by the Third Council. See #9 and #10 of [“Abhidhamma – Introduction.”](#)

Deeper Meanings Can Stay Hidden for Long Times

10. There are long periods when the correct teachings remain “underground” or “hidden.” That happened just 500 years after the *Parinibbāna* of the Buddha with the emergence of Mahāyāna Buddhism. During

such times, people use conventional interpretations. **And that served the purpose of keeping the *suttā* intact, especially before written texts became common.**

- A perfect example is the *Ānāpānasati Sutta* (or the *Satipaṭṭhāna Sutta*). The conventional meaning is to tie up “*āna*” with breath inhaling and “*āpāna*” with breath exhaling.
- That was consistent with the breath meditation that has been there in the world at any time. Many *yogis* practiced it even before the time of the Buddha. He learned those methods from such *yogis* before attaining Buddhahood.
- For details, see “[Elephant in the Room 3 – Ānāpānasati](#).”

Special Role of *Jāti Sotāpannas* With *Paṭisambidhā Ñāṇa*

11. From time to time, *jāti Sotāpannas* are born. They had attained the *Sotāpanna* stage in a previous life, possibly when Buddha was alive. They likely have had births in the *Deva loka* for a long time and are reborn humans now.

- However, not all *jāti Sotāpannas* can explain Buddha Dhamma to others. Some have the unique capability to interpret the keywords/phrases in the *suttā*. This specialized knowledge is “*Paṭisambidhā Ñāṇa*.”
- Waharaka Thero was such a *jāti Sotāpanna* with *Paṭisambidhā Ñāṇa*. He brought out these deeper meanings in recent years. See, “[Parinibbāna of Waharaka Thero](#).”

Misinterpretation of *Dhamma* Concepts Is an Offense

12. It is an offense (*pārājika*) to misinterpret *suttā* (and *dhamma* concepts in general.) That is in several *suttā* in the [WebLink: suttacentral: Bālavagga of Aṅguttara Nikāya 2](#).

- For example, [WebLink: suttacentral.net: AN 2.25](#) is a short *sutta* that says: “*Dveme, bhikkhave, tathāgataṃ nābbhācikkhanti. Katame dve? Yo ca neyyatthaṃ suttantaṃ neyyattho suttantoti dīpeti, yo ca nītatthaṃ suttantaṃ nītattho suttantoti dīpeti. Ime kho, bhikkhave, dve tathāgataṃ nābbhācikkhanti*” *ti*.
- **Translation (to provide the idea):** “Monks, these two people slander the *Tathāgata*. Which two? One who briefly explains a deep discourse when it needs a detailed explanation. The other explains a discourse in detail whose meaning is already clear. These are two who slander the *Tathāgata*.” [“[WebLink: suttacentral: A Meaning to be Inferred \(AN 2.25\)](#)”] [*Tathāgata* : the ‘Perfect One’, lit. the one who has ‘thus gone’, or ‘thus come’, is an epithet of the Buddha used by him when speaking of himself.]
- Two perfect examples of the first type of slander say that the words *anicca* and *anatta* are fully explained by “impermanence” and “no-self.” Those two concepts require detailed explanations. See “[Anicca, Dukkha, Anatta](#).”

Checking for Inter-Consistency Among the Three *Piṭakas* Is the Key

13. The Buddha advised resolving any issues by consulting the three *Piṭakā*: *Sutta*, *Vinaya*, and *Abhidhamma*.

- For example, a concept in the *Sutta Piṭaka*, for instance, must be consistent with other places in the *Sutta Piṭaka*. It must also be compatible with explanations in the *Abhidhamma Piṭaka* and the *Vinaya Piṭaka*. See “[Buddha Dhamma: Non-Perceivability and Self-Consistency](#).”
- As the Buddha emphasized, what matters is to get the IDEA across and not memorize the Pāli *suttā*. (Memorization is needed only for transmission purposes).

Summary

14. The following are the key points from the above discussion that I wish to emphasize:

- The *suttā* convey “conventional” meanings while keeping the “deep meanings” embedded in them.
- Those “deep meanings” bring out the uniqueness of Buddha Dhamma.
- Word-for-word translation of a *sutta* does not convey the message of the Buddha. Examples are critical Pāli words like *viññāṇa*, *saṅkhāra*, *anicca*, and *anatta*.
- The surviving three original commentaries in the *Tipiṭaka* can verify the deep meanings of the keywords/phrases.

Good Resource for Pāli *Tipiṭaka*

15. A helpful resource for finding Pāli *Tipiṭaka* (and translations in several languages) is suttacentral.net.

- Once you open a *sutta*, click on the left-most drop-down to choose one of several languages. That is a valuable resource; consider donating if you find it useful.
- **However, as I explained above, those translations (and most English translations elsewhere) are frequently incorrect.**
- But at least one can see the correct Pāli version.

Next, [“Pāli Dictionaries – Are They Reliable?”](#)

17.2 Pāli Dictionaries – Are They Reliable?

March 4, 2017; Revised March 5, 2017; Revision March 7, 2017; May 17, 2018; October 27, 2018; August 20, 2019; June 28, 2020; February 3, 2023

In the website's early days, I received several emails pointing out that my interpretations of certain words were incompatible with those in Pāli dictionaries. I hope I can explain why one must be careful in using a Pāli dictionary if one's goal is to grasp the actual teachings of the Buddha. Of course, I learned this from my Noble teacher, the late Waharaka *Thero*.

1. In Pāli a word can have different meanings depending on the context. Furthermore, sometimes, grammar rules are bypassed.

- Many problems with an incorrect interpretation of the *Tipiṭaka* arise mainly because of those two misconceptions.
- Pāli does not have an alphabet. It was a spoken language. The Pāli Canon (*Tipiṭaka*) was first written using the Sinhala alphabet around 5 BCE (two thousand years ago); see, "[Historical Background](#)."

2. Even in English, words can have different meanings depending on context. Following are some examples for three words:

- Right: You are right. / Make a right turn at the light.
- Rose: My favorite flower is a rose. / He quickly rose from his seat.
- Type: He can type over 100 words per minute. / That dress is not her type.

(Read more at "[WebLink: grammar.yourdictionary.com: Words with Multiple Meanings](#)").

- In the Pāli language, there are **many** keywords with different meanings. In many cases, there is a conventional and deeper meaning, as mentioned above: "[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#)."

3. Pāli is a phonetic language. The *Tipiṭaka* was faithfully transmitted for hundreds of years because verses were formulated for easy memorization. Grammar rules are bypassed in some cases. That is clear in the verses, "*Buddhaṃ Saranaṃ gacchāmi*," "*Dhammaṃ Saranaṃ gacchāmi*," for example. [In Pāli, if the verb is "*gacchāmi*" with the ending "*..mi*" it is for the **1st person singular "I"**, and if the word is "*gacchāma*" with the ending "*..ma*" it is for the **1st person plural "We"** and similarly for 2nd person (*si* , *tha* - you, you all), and 3rd person (*ti*, *nti* - he, they).]

- There is no subject in the above verse. The first of course means, "I take the refuge in the Buddha," but "I" is missing in "*Buddhaṃ Saranaṃ gacchāmi*." It is just understood.
- If you look at *suttā*, there is no clear grammatical structure. The sound that gives the meaning, and most verses have "double meanings": There is a simple meaning, but deeper meanings may be hidden. I have discussed this to some extent in the post, "[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#)."
- Some key Pāli words are discussed in the post: "[Sorting out Some Key Pāli Terms \(Tanhā, Lobha, Dosa, Moha, etc\)](#)" and "[What is "Saṇ"? Meaning of Sansāra \(or Samsāra\)](#)."

4. Let us start with the word "*atta*" (pronounced "aththa" or "aththā" depending on where used). This word can have many meanings depending on the context.

- **In the conventional sense**, "*attā*" means "a person." It is used with this meaning in some contexts; see below.
- **The deeper meaning of "*atta*"** is "in full control," "the essence," or "the truth that is timeless." Just like the word "*anicca*," it is impossible to translate as one word in English. **One has to get the idea by learning how it is used in various situations.** The opposite of "*atta*" is *anatta*. That means "helpless" in the case of a living being or "useless" in the case of an inert thing.

- At least, in this case, one could see the difference in meaning by the way they are pronounced: *attā* versus *atta*.
 - Both these meanings appear in the Dhammapada verse (*gāthā*), “*Attā Hi Attano Nātho*” that I am posting concurrently.
5. We can take more examples to illustrate the application of “*atta*” with those two very different meanings.
- In “*atta kilamatānu yoga*” *atta* is used in the conventional sense, to describe “procedures that cause suffering in a person.”
 - *Sutta* comes from “*su*” and “*atta*”: a *sutta* can make someone moral and ethical. So, here also, *atta* is used in the conventional sense.
 - The phrase “*anattā asāraṇaṭṭhena*” means “(anything in this world) is *anatta* because it is devoid of any good or any usefulness.” Something is *atta* only if it is the ultimate truth or has timeless value. Here, of course, the deeper meaning is used. [*asāraṇa* : (adj.) [*a* + *sāraṇa*] unessential, worthless, sapless, rotten.]
6. *Paramattha* comes from “*parama*” + “*attha*,” where “*parama*” means “at the highest level” and “*attha*” means “the truth that is timeless,” the deeper meaning.
- This word has been translated to Sinhala as “*artha*” to indicate “meaning” in Sinhala. So, the Pāli word *paramattha* has been translated to Sinhala as “*paramārtha*” or “ultimate meaning.”
 - Therefore, the four types of *ñāṇa* (pronounced “gnāna”) involved in the *Paṭisambhidā Ñāṇa* are, “*attha*, *dhamma*, *nirutti*, *patibhāna*.” These days, they appear in Sinhala as, “*artha*, *dharma*, *nirukthi*, *patibhāna*.”
 - I will write a separate post to discuss those four terms in the *Paṭisambhidā Ñāṇa*. A person qualified to explain Buddha Dhamma to others is supposed to have the *Paṭisambhidā Ñāṇa*. Otherwise, one could mislead others by providing incorrect explanations. Of course, no one but a Buddha can provide entirely error-free answers. It does not make much sense to learn Dhamma from someone who is at least not a *Sotāpanna* (i.e., an *Ariya*).
7. Of course the most problematic misuse of “*atta*” as “a person” or “a self” is in *Tilakkhaṇa*, the Three Characteristics of Nature. There, *anatta* is commonly translated just as “no-self.” One correct expression is “no-unchanging self”.
- We need to realize that “*atta*” is always “truth” and “*attā*” could be “person” in the conventional sense. **So, the opposite of “*atta*” is ALWAYS “*anatta*” (pronounced “*anattththa*.”)**
 - That — together with translating *anicca* as “impermanence” — had kept *Nibbāna* hidden for a thousand years: see, “[Anicca, Dukkha, Anatta](#).”
8. That is why a dictionary can’t provide fixed meaning for the word “*atta*,” as well as for *anatta*, *nicca*, *anicca*, and many other words.
- Many words are supposed to have both conventional and deeper meanings. Only someone who has the *Paṭisambhidā ñāṇa* can correctly explain the meaning of a verse in the *Tipiṭaka* **regardless of where the word appears.**
 - Therefore, in most current English literature on Buddha Dhamma, some explanations are correct, but many are not. That is because of the tendency to use a fixed meaning for a keywords without paying attention to **context**.
9. Another important such word is “*paṭi*,” which is also pronounced as “*pati*,” not as “*pathi*” (see #11 below.) I have received emails saying that Pāli dictionaries say “*paṭi*” means “against”.
- *Paṭi* is also a Sinhala word that is being used to this day. It means “bonds” or “ties,” just as in Pāli.

- If “*paṭi*” means “against,” how would that be compatible with many other words with “*paṭi*”? For example, “*paṭisamvedī*” or “*paṭisanvedī*” (“*paṭi*” + “*saṇ*” + “*vedī*”) means *vedanā* due to bonds with “*saṇ*” becoming apparent. *Paṭinissagga* means “getting rid of bonds”. *Paṭiniddesa* means “detailed instructions on sorting out knotty or difficult points,” etc. The latter is explained in detail in “[Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa.](#)”

10. One could get a better idea of a keyword by looking at its application in various situations. The word *paṭisambhidā* in *paṭisambhidā ṇāṇa* is a good example.

- *Paṭisambhidā* comes from *paṭi* + *saṇ* + *bidhā*. “*Saṇ*” is, of course, a keyword; see, “[What is “Saṇ”? Meaning of Sansāra \(or Samsāra\),](#)” and *bidhā* means to separate or to break apart; “*bindeema*” is the Sinhala word.
- So, *Paṭisambhidā ṇāṇa* is the knowledge to be able to sort out the meaning of a word by breaking it down to locate “*saṇ*,” i.e., connection to defilements.
- And that interpretation must be consistent with “*attha, dhamma, nirutti, paṭibhāna*” as discussed in a future post. By the way, *paṭibhāna* means the ability to describe in detail with examples. *Nirutti* means finding the origins of keywords, i.e., how compound words are put together using critical words like *paṭi* and *atta* or *attha*.

11. Other examples come in the *gathā* to pay tribute to the *Saṅgha*: “*supaṭipanno bhagavatho savaka sangho, Ujupaṭipanno...*”

- Here the “bonding” is to “good things.” *Supaṭipanno* means “bound to moral things,” *Ujupaṭipanno* means “bound to be straightforward,” *Ñāyapaṭipanno* means “bound with wisdom,” and *Sāmīchipaṭipanno* means “good to associate with.”
- Another is “*paṭisandhi*,” which comes from “*paṭi*” + “*sandhi*,” where *sandhi* (which is also a Sinhala word) means “to join.” At the *cuti-paṭisandhi* moment, one’s mental body (*gandhabba*) dies and one grasps a new existence. So, this joining of two adjacent lives is called *paṭisandhi*.
- Note that *cuti* is pronounced as “chuthi.” See, “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 1](#)” and “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 2.](#)”
- Of course, the most important is “*paṭi*” in *Paṭicca Samuppāda*; see, “[Paṭicca Samuppāda – “Paṭi+ichcha”+“Sama+uppāda.”](#)”

12. Here is a table showing the conventional and deeper meanings of some key Pāli words. Some meanings given in dictionaries are wrong, and they are in bold. Whether to use the correct conventional meaning or the deeper meaning depends on the context (where the word is used); a good example is, “[Attā Hi Attano Nātho.](#)”

	Conventional	Deeper Meaning
<i>Atta</i>	Person, self	In control, has essence or ultimate truth
<i>Anatta</i>	no-self (incorrect)	helpless, no essence and devoid of value
<i>Ānāpāna</i>	in and out breathing	take in moral, discard immoral (in the mind)
<i>Majjhima</i>	middle	majji + ma (avoid intoxication of mind)
<i>Icca</i>	like	like
<i>Nicca</i>	permanent (incorrect)	can be maintained to liking
<i>Anicca</i>	impermanent (incorrect)	cannot be maintained to liking
<i>Pati</i>	against (incorrect)	bind

	Conventional	Deeper Meaning
<i>Sammā</i>	(i) good (ii) friend (incorrect)	<i>saṃ</i> + <i>mā</i> ; removal of “ <i>saṃ</i> ”

13. Also see, “[Why is it Necessary to Learn Key Pāli Words?](#)” and “[What is “Saṃ”? Meaning of Sansāra \(or Saṃsāra\)](#)”

- Mostly the deeper meanings of Pāli words can be found at: “[Pāli Glossary – \(A-K\)](#)” and “[Pāli Glossary – \(L-Z\)](#).”
- Again, one must pay attention to make sure that the meaning found in a dictionary is compatible with the context.

17.3 Nikāya in the Sutta Piṭaka

January 7, 2016

1. The *Tipiṭaka* or the Pāli Canon of Buddha Dhamma (Buddhism) consists of three major sections or “baskets” called “*piṭaka*” (*Tipiṭaka* is three *piṭaka*). They are *Sutta piṭaka*, *Vinaya piṭaka*, and the *Abhidhamma piṭaka*.

- The *Sutta piṭaka* consists of five sections called “*nikāya*.” The Wikipedia is wrong to say that *nikāya* means “volume” in Pāli (and also what is meant by the five types of *nikāya*); see, [WebLink: Wiki: Nikāya](#)
- *Nikāya* comes from “*nī*” + “*kāya*” where *kāya* means our **volitions and actions** initiated via the six sense inputs, like in “*kāyānupassanā*” where one is mindful of how to respond to those sense inputs. Here, “*nī*” means to cease (*nikmeema* in Sinhala means to be freed) and thus *nikāya* means “path to *Nibbāna*”. At *Nibbāna*, one has stopped all *kāya*.

2. All *suttā* (note that plural of *sutta* is *suttā*) are in those **five *nikāyas* (*Dīgha*, *Majjhima*, *Saṃyutta*, *Aṅguttara*, and *Kuddaka*)**, based on the five types of people. All humans are in five general types based on their *sansāric* habits and capabilities. They are also called “*indriya* types”: *saddha*, *virīya*, *sati*, *samādhi*, *paññā*. (Note that “*indriya*” here is different from the sense types such as *cakkhu indriya*, etc., as discussed in #6 and #7 below).

- ***Dīgha Nikāya*** is mainly for those with predominant *saddha indriya* who need detailed explanations. These are long (*dīgha*, pronounced “*dheega*,” which means long in Pāli and Sinhala). For example, the *Mahā Satipaṭṭhāna Sutta* in the *Dīgha Nikāya* provides detailed instructions on how to be mindful and practice *ānāpāna*.
- *Suttā* in the ***Kuddaka Nikāya*** (“*ku*” + “*uddaka*” where “*ku*” is *keles* or defilements and “*udda*” means to remove) are short and concise. They provide brief instructions for those with high wisdom (*paññā indriya*).
- ***Majjhima Nikāya*** has “middle length” *suttā* that provide instructions at a level in between those in the *Dīgha Nikāya* and the *Kuddaka Nikāya*. It is more suitable for those with dominant *virīya indriya*. Note here that *Majjhima* means “middle,” but *Majjhimā* — as in *Majjhimā patipadā* — has a deeper meaning of “abstaining from getting intoxicated”; see, “[Majjhima Patipada – Way to Relinquish Attachments to this World](#).”

3. The *suttā* in the ***Saṃyutta Nikāya*** are focused on explaining “*saṇ*”, which is a critical word in the foundation of Buddha Dhamma; see, “[What is “Saṇ”? Meaning of Sansāra \(or Saṃsāra\)](#).”

- Here *Saṃyutta* comes from “*saṇ*” + “*yutta*” where *yutta* (pronounced “*yuththa*”) means “consists of.” It natural to pronounce as “*Saṃyutta*” than “*sanyutta*.” This is true of many combined words with “*saṇ*” (like *saṃsāra*, *Sammā* = “*saṇ*” + “*mā*”).
- *Suttā* in the *Saṃyutta Nikāya* are said to be more suitable for those with dominant *sati indriya*.

4. *Suttā* in the ***Aṅguttara Nikāya*** are said to be more suitable for those with dominant *samādhi indriya*.

- *Aṅguttara* comes from “*anga*” + “*uttara*” where “*anga*” means parts or components and “*uttara*” means “predominant or principle.” Therefore, the *suttā* in the *Aṅguttara Nikāya* are focused on fundamental principles and are also relatively short. These *suttā* are more suitable for people who can quickly get to *samādhi*.
- These categories help explain why *Dīgha* and *Majjhima Nikāya* *suttā* are the ones that are mostly in use today. Most people today fall into the categories of those with the *saddha* and *virīya indriya* dominant.

5. It is also important to point out a different usage of the term “*nikāya*.” Among the *Theravāda* nations of Southeast Asia and Sri Lanka, bhikkhus (and the temples they reside in) belong to several different groups or *nikāya*.

- For example, in Sri Lanka different temples belong to three types of *nikāyas*: *Siam*, *Ramanya*, and *Amarapura*.
- They are all *Theravāda* and there is no real difference among them as far as the doctrine is concerned. When one visits a temple, it is not possible to say to which *nikāya* it belongs.

6. The word *indriya* comes in two contexts. “*Indriya*” means “dominant” in some contexts. Here, the six types of dominant sense faculties are *indriya*: *cakkhu*, *sota*, *jivhā*, *ghāṇa*, *kāya*, and *mano*.

- Modern science deals with only five physical senses of eyes, ears, tongue, nose, and body.
- Scientists believe that our brains randomly produces our thought. That will be proven to be incorrect in the future.
- *Mana indriya* — located in the brain — is the sixth and most important one according to Buddha Dhamma. It detects *dhammā* from the “*nāma loka*”; see, “[Our Two Worlds: Material and Immaterial](#)” and “[What are Dhamma? – A Deeper Analysis](#).”
- *Rūpa* are eleven types, but are split into two main categories (*oḷārika* or dense and *sukhuma* or fine). Those above the *suddhaṭṭhaka* level belong to the material world or “*bhauthika loka*.” Those below the *suddhaṭṭhaka* level (*dhammā*) belong to the mental world or “*nāma loka*.” The five physical senses detect those *rūpa* above the *suddhaṭṭhaka* level. The *mana indriya* detects those below the *suddhaṭṭhaka* level (*dhammā*). see, “[Our Two Worlds: Material and Immaterial](#).”

7. The other use of *indriya* is with categorizing people by their dominant characteristics and capabilities (*gati*). For some people, it is easy to grasp Dhamma concepts. That is because they have cultivated the Path in their previous lives, and thus have higher wisdom (*paññā*).

- Some others have also cultivated the Path mainly via just following precepts, but have high confidence in Buddha Dhamma. They are said to have their *saddha indriya* dominant.
- Some have the *sati indriya* dominant; they can focus on a given concept better than others.
- We all are familiar with some people who have the *virīya indriya* dominant; they are the “never give up” type, who seem to have inexhaustible energy levels.
- Some others have meditated and possibly got into *jhānā* in previous lives and have the *samādhi indriya* dominant.

8. Finally, there is an excellent website that has the full and complete *Sutta Piṭaka* with all Pāli *suttā*: [WebLink: Sutta Central](#)

- That site also has the complete *Vinaya* and *Abhidhamma Piṭaka* as well (in Pāli).
- Sutta Central also has Sanskrit *sūtras*, which are, of course, *Mahāyāna*.
- The Chinese *Agama suttā* are also at this site (in Chinese). As I understand, they are very close to *Theravāda suttā*. Those translations to Chinese from *Theravāda* happened before the appearance of *Mahāyāna sūtras*. I would appreciate feedback from persons who are proficient in both Chinese and English, as to whether my understanding is correct.

17.4.1 Satipaṭṭhāna Sutta – Structure

Revised September 1, 2016; October 29, 2017; February 16, 2020; April 21, 2022; June 7, 2022

Introduction

This post is the most important post on the *Mahā Satipaṭṭhāna Sutta*. It sets the foundation. This is where 99% of people should get started.

1. Several websites provide the Pāli version of the *sutta* and its English translation. I believe that they all are incorrect translations, and as I proceed, I will explain why.

- Here is a website that provides Pāli and English translations of the *sutta* side-by-side: [WebLink: tipitaka.org : Mahāsatipaṭṭhāna Sutta \(Pāli-English\)](http://tipitaka.org: Mahāsatipaṭṭhāna Sutta (Pāli-English))
- It is not the fault of those who took their time with good intentions to write those posts. That is how this *sutta* and others have been interpreted for more than a thousand years.
- I will not follow the *sutta* sequentially, but you will be able to follow the relevant sections. Eventually, I hope to cover most of the *sutta*.

Three Levels of Explanations

2. As I explained in “[Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa](#),” there are three ways of presenting Dhamma: *uddesa*, *niddesa*, and *paṭiniddesa*.

- *Mahā Satipaṭṭhāna Sutta* is in the *niddesa* version (i.e., provides an outline,) but has the *uddesa* (very brief) version at the very beginning. See the above link in #1 which provides the complete *sutta* in Pāli and English.
- In the main body of the *sutta*, the concepts are **outlined**. Those key concepts are supposed to be described in detail, with examples, in verbal discourses (i.e., a *desanā*.) That is what I will be doing in these series of posts, i.e., describe the concepts in detail.
- Note that some suttas are in the *uddesa* version and require explanation in the *niddesa* and *paṭiniddesa* versions. Word-by-word translations of such *suttas* can lead to much confusion. See, “[Distortion of Pāli Keywords in Paṭicca Samuppāda](#).”

Uddesa Version – Brief Summary

3. The *uddesa* (or *uddeso*) starts with, “*Ekāyano ayaṃ, bhikkhave, maggo sattānaṃ visuddhiyā, sokaparidevanāṃ samatikkamāya, dukkhadomanassanāṃ atthagamāya, nāyassa adhiḡamāya, nibbānassa sacchikiriyāya, yadidaṃ cattāro satipaṭṭhānā*”

- **Translation:** “This is a **guaranteed way**, for the purification of beings, for the overcoming of sorrow and lamentation, for the extinguishing of suffering and grief, the Noble way for gaining wisdom, for the realization of *nibbāna*. That is to say, the fourfold establishing of **moral mindset**”.
- It is a “**guaranteed way**” to *Nibbāna* because it comes first in the “[37 Factors of Enlightenment](#)” required to get to *Nibbāna*.

Two Key Points

4. The main difference from the translation (conventional interpretation) given in the link in #1 above are the two phrases highlighted above:

- The translation of “*nāyassa adhiḡamāya*” and “*satipathāna*”: “*Nāya*” (Sanskrit “*nyāya*”) means “underlying principle.” It is grasped with “*ñāṇa*” or wisdom, and “*adhiḡama*” is “*adhi*+”*gama*” or “higher way”. **Translating *Satipatṭhāna* as “moral mindset”** is not too bad, but I will discuss “*satipatṭhāna*” in the next post.
- So, the essence of that verse is that the method described in the *Satipatṭhāna sutta* provides a guaranteed way to attain *Nibbāna*, **via purification of the being, i.e., via cleansing one’s mind**.

“Four Stations” of Mindfulness

5. The next phrase is, “*Katame cattāro? Idha, bhikkhave, bhikkhu kāye kāyānupassī viharati ātāpī sampajāno, satimā vineyya loke abhijjhā domanassam. Vedanāsu vedānupassī viharati ātāpī sampajāno, satimā vineyya loke abhijjhā domanassam. Citte cittānupassī viharati ātāpī sampajāno, satimā vineyya loke abhijjhā domanassam. Dhammesu dhammānupassī viharati ātāpī sampajāno, satimā vineyya loke abhijjhā domanassam*”

- Of course, “*Katame cattāro?*” is, “Which four? (*cattaro* pronounced, “chatththaro”). Pāli words are NOT spelled according to “Standard English.” See, “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 1](#)” and “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 2](#).”
- And then it lists the four: *kāyānupassana*, *vedānupassana*, *cittānupassana*, and *dhammānupassana*. Notice that the phrase, “*ātāpī sampajāno, satimā vineyya loke abhijjhā domanassam*” appears after each of the four.
- This indicates the critical importance of this phrase. This is the beginning of the purification process, by laying out the foundation; see, “[“Satipatṭhāna Sutta – Relevance to Suffering in This Life.”](#) **One HAS TO go through this process to reach the *Sotāpanna* stage.**

A Key Phrase Relevant to All Four

6. The “[WebLink: suttacentral: Lakkhanahāravibhaṅga \(Ne 8\)](#)” of the Tipiṭaka Commentary *Nettipakarana* explains the meaning of the verse, “*kāye kāyānupassī viharāhi ātāpī sampajāno satimā vineyya loke abhijjhādomanassam*.” (p. 50 of the *නෙත්තිපකරණ* in Sri Lanka Buddha Jayanthi edition in Pāli/Sinhala languages.)

To quote: “*Tasmātiha tvam bhikkhu kāye kāyānupassī viharāhi ātāpī sampajāno satimā vineyya loke abhijjhādomanassam*”. “*Ātāpī*”*ti vīriyindriyam*, “*sampajāno*”*ti paññindriyam*, “*satimā*”*ti satindriyam*, “*vineyya loke abhijjhādomanassam*”*ti samādhindriyam*.”

Translated: “*Ātāpī, sampajāno, satimā, and vineyya loke abhijjhādomanassam*” are, respectively, “*virīya indriya, paññā indriya, sati indriya, and samādhi indriya*.”

- Note that those are four of the five *indriya* that are required for the cultivation of the Noble Eightfold Path.

- One would already have the “unshakeable faith” (*saddhā indriya*) when one gets on the Noble Path.

7. That **all-important common phrase**, “*ātāpī sampajāno, satimā vineyya loke abhijjhā domanassam*,” is common to all four “stations of mindfulness.”

- *Sampajana* comes from “*saṇ*” + “*pajana*” or sorting out “*saṇ*” the things that make a mind stressful; see, “[What is “Saṇ”?](#).” The worst forms of “*saṇ*” are the ones that we instinctively know to be immoral. They include killing, stealing, sexual misconduct, lying, and getting intoxicated. [*pajānanā* : [f] knowledge; understanding; discernment.]
- *Sampajana* is closely related to “*sampādetā*” as in the Buddha’s last words: “..*appamadena sampadeta*” or “..make haste and sort out *saṇ*.” Here *sampadeta* is “*saṇ*”+“*padeta*” or again sort out “*saṇ*”.
- When one has done “*sampādetā*” one becomes “*sampajanno*”: One knows what is right and what is wrong automatically; it has become a habit.
- This critical verse is discussed in the following *desanā* from the post, “[WebLink: Audio Desana: Episode 3 - Satipatthāna Sutta - Relevance to Suffering in This Life](#)” (you may need to control the volume at your computer):

[Episode 3 – Maha Satipatthāna Sutta – Relevance to Suffering in This Life](#)

Ātāpī Sampajāno

8. Therefore, “*ātāpī sampajāno*” means “make effort to acting with *paññā*.” That involves getting rid of ‘*saṇ*’ or “immoral tendencies”. They also go by the names “*kilesa*” and “*asobhana cetasika*”; see, “[What Are Kilesa \(Mental Impurities\)? – Connection to Cetasika](#).”

- When one starts making progress, one could start to avoid tendencies for extreme sense pleasures as well.
- Note that “*tāpa*” (pronounced “thāpa”) means heat; when we get really stressed we feel a “fire” in the heart. When it gets really bad, people say, “I could feel my heartburn” when a piece of especially poignant news comes through. Thus, “*ātāpī*” is to remove that “fire” from the heart and the stress from the mind and calm the mind. This is the “cooling down”, “*niveema*”, “*nivana*” or early stages of *Nibbāna*. When one makes the effort (*virīya*) the result is that “cooling down.”

Satimā Vineyya Loke Abhijjhā Domanassam

9. Then we have, “*satimā vineyya loke abhijjhā domanassam*.” This is a highly condensed statement about how to remove *abhijjhā* and *domanassa* by being mindful of one’s actions at ALL TIME.

- The root cause of all suffering is extreme greed or “*abhijjā* [*abhijjhā*]” (which comes from “*abhi*” + “*icchā*” or strong craving or attachment). When one does not get what one desires, one gets depressed. That is *domanassa*. It is important to see that one acts with hate with a *domanassa* mindset because one is upset, deflated, and angry.
- Thus “*sati mā vineyya loke abhijjhā domanassam*” means establishing a moral mindset and moral conduct in order to be free from the debt-ridden world and to be relieved from *abhijjā* [*abhijjhā*] and *domanassa*. This is the key to “cooling down”; see, “[Living Dhamma](#)” for details.
- Both Satipatthāna and *Ānāpānasati Bhāvanā* describe how to achieve that. The “[WebLink: suttacentral: Indriyabhāvanā Sutta \(MN 152\)](#)” also describes the basic idea of the maintenance of one’s sense faculties by being mindful of one’s actions at ALL TIMES.

A Key Idea Behind the Sutta

10. Thus the verse, “*ātāpi sampajāno, satimā vineyya loke abhijjhā domanassam*,” means “making effort to act with wisdom by being mindful (*sati*); that will lead to gradual reduction of *kilesa* or defilements and by removing extreme greed (*abhijjhā* [*abhijjhā*]) that leads to a depressed mind (*domanassa*) through discipline (*vineyya*)”.

- In the first stage, one needs to focus on abstaining from immoral activities or *dasa akusala*.
- Therefore, the phrase, “*ātāpi sampajāno, satimā vineyya loke abhijjhā domanassam*” is the key to both *Satipaṭṭhāna* and *Ānāpāna Bhāvanā*.
- The rest of the *Satipaṭṭhāna sutta* is on the details of how to go about achieving these goals.

The “Cooling Down”

11. This “cooling down” happens in four ways. They are *kāyānupassanā*, *vedanānupassanā*, *cittānupassanā*, and *dhammānupassanā*.

- These are somewhat sequential, in the sense that one needs to start with taking care of major sources of *abhijjhā* [*abhijjhā*] and *domanassa* with *kāyānupassanā*. This is basically the same as *sīla* or moral conduct. One needs to be aware that one’s actions and speech need to be moral, i.e., to abstain from *dasa akusala* as much as possible.
- Once one achieves that to a certain extent, moral conduct will follow. One will “feel” when one is about to do something wrong. That means one will become “sensitized.” But initially, it takes an effort to pause and think of the consequences.
- With the mind clear of the worst hindrances, then it will be easier to learn Dhamma with *dhammānupassanā*, be easier not to REACT to feelings (*vedanānupassanā*) but to take time and evaluate consequences, and automatically be aware of immoral thoughts that come to the mind (*cittānupassanā*).
- Thus it is a gradual process. Each advance helps with gaining confidence in one’s actions, helps not to just react to feelings, and helps to think with a clear head, which in turn helps with the understanding process.

Comprehension of *Tilakkhaṇa* Will Accelerate Progress

12. The process of comprehension of *Tilakkhaṇa* (*anicca*, *dukkha*, *anatta*) starts with *kāyānupassanā* but all four can be cultivated simultaneously. The Buddha stated that if one makes an all-out effort, *Arahanthood* can be attained in seven days. If one makes less commitment, either *Arahant* or at least the *Anāgāmī* stage is attained within seven years according to the Buddha.

- Getting started on this process is described in detail in the section, “[Living Dhamma](#).”
- Another deeper approach is discussed in, “[Origin of Life](#).”

Connection to *Dasa Akusala*

13. Finally, *kāyānupassanā* basically tackles *dasa akusala* done with actions and speech (moving body parts), as we will see in the next section. The harder part comes with those done directly by the mind, especially *micchā diṭṭhi* or wrong views.

- There are two levels of *micchā diṭṭhi*. First, the 10 types of *micchā diṭṭhi* removed via the mundane Path. Removal of the deeper wrong views comes with the grasping of *anicca*, *dukkha*, and *anatta*.
- Thus we can see the critical role of the *paññā indriya* (wisdom). One can start on all four types of *anupassanā*. However, when one becomes good in *kāyānupassanā*, the other three types of *anupassanā* cultivate to some extent too.

- **The key is to get started with *kāyānupassanā* and make the effort (*virīya*). Then wisdom (*paññā*) will grow together with mindfulness (*sati*), and one will automatically get into the other three *anupassanā* with increasing levels of *samādhi*.**

Next, "[Satipaṭṭhāna – Introduction](#)",

17.4.2 Satipaṭṭhāna – Introduction

Revised January 26, 2019; June 6, 2022

You may want to read the post: "[Satipaṭṭhāna Sutta – Structure](#)," which explains the basic layout of this long sutta. You can read it before or after reading this post.

1. First we need to figure out what "*sati*" means. Bear with me as I use some key Pāli words because it is important to understand them correctly. Things will become clear as we proceed below. Again, first, try to read the post through without clicking on links, and then come back and read any relevant other posts as needed.

- *Sati* is a "good" mental factor (*sobhana cetasika*). Therefore, "*sati*" arises only in moral thoughts (*kusala citta*), and DOES NOT arise in *akusala citta*. As discussed in "[Cetasika \(Mental Factors\)](#)", "good *cetasika*" do not arise in *akusala citta* (similarly, "bad *cetasika*" do not arise in *kusala citta*).
- There is no "*asati*" *cetasika*. Therefore, the word "*asati*" is NEVER used as the opposite of this "*sati*", which is a "good *cetasika*."

2. However, there is another "mundane" meaning for "*sati*", which is "attention" or "mindfulness". Therefore, one must be able to figure out which meaning is to be used in a given context (depending on the subject matter).

- If one is not paying attention to the task at hand, then one is acting with "*asati*", without being mindful of what one is doing or contemplating.
- That way one can clearly see the two different meanings of "*sati*".
- Of course, in *Satipaṭṭhāna*, one is being mindful, but one MUST also know the deeper meaning too, in order to figure out **what to be mindful about**.

3. We can clarify the mundane meaning with the following examples: A suicide bomber has to pay close attention to wiring up the bomb; otherwise, he can detonate it accidentally. A professional thief making plans for a grand robbery in minute detail needs to pay total attention to it too, in order to make sure he does not get caught.

- The deeper meaning of "*sati*" is NOT involved in either case. The suicide bomber or the thief would not have that "*sati*", the good mental factor.
- More details on this "*sati*" can be found in the post: "[Imasmim Sati Idam Hoti – What Does It Really Mean?](#)".

4. **When a person stops and contemplates whether an action one is about to take has moral or immoral consequences, and carries out only those actions that have moral consequences, then that person is acting with "*sati*", the "good mental factor".**

- That is the "*sati*" in the MINDSET of a person engaged in *Satipaṭṭhāna*. Of course, he will be paying attention to catch any immoral thoughts that may arise in his mind.
- Therefore, a person engaged in *Satipaṭṭhāna* will be using both types of "*sati*".
- Now let us see what is meant by *patṭhāna* in *Satipaṭṭhāna*.

5. *Paṭṭhāna* can mean establishment, preparation, or “to mold”. Therefore, “*satipaṭṭhāna*” means the establishment of “*sati*”, or training the mind to act with “*sati*” as described above.

- This training process comes in four steps, and that is why it is also called “*Catāro Satipaṭṭhāna*” where ‘*Catāro*’ means four. Even though the four steps are interrelated, there is a sequence. The four steps are *kāyānupassanā*, *vedanānupassanā*, *cittānupassanā*, and *dhammānupassanā*.
- The meaning of “*anupassanā*” is described in point #4 of “[4. What do all these Different Meditation Techniques Mean?](#)” in the Meditation section.

6. Buddha Dhamma is all about cleansing the mind; that is the key to real and lasting tranquility of the mind. A defiled mind generates defiled thoughts (*citta*). Defiled thoughts lead to defiled speech (with a time lag) and defiled actions (with an even longer time lag).

- **The sequence of cleansing the mind is backward:** First control bodily actions, then (or simultaneously) to control speech, and controlling thoughts (as they arise) is harder. This is important to understand, so let us look into the reasons.

7. As discussed in the *Abhidhamma* section, thoughts (*citta*) arise very fast; there are well over billions of *cittā* per second but of course we “experience” only “bundles of *citta*” accumulating for at least about 0.05 seconds. **Even then it is not possible to control thoughts by sheer will power.**

- But our thoughts are dictated by our character and habits (“*gati*”). And, these character qualities (*gati*) can be changed with a concerted effort by controlling one’s speech and actions. We have discussed “*gati*” in many posts spread over different sections.

8. This is why *kāyānupassanā* comes first in *Satipaṭṭhāna*. We first discipline ourselves by making sure we speak only moral words and do only moral actions. Both speech and actions arise from thoughts, but they come with a “time lag”. We first think that “this person has done something bad to me”, and then we start saying something bad to the person. But there is enough of a “time lag” to stop saying it.

- We tend to take “bodily actions” with even longer delay than for speech. So, unless one is in a rage, there is enough time to catch oneself and stop any bad actions. Actually, when we get good at it and control both speech and actions, such instances of acting with rage will diminish with time and will go away. This is because the more we act with “*sati*”, the more that we give up bad “*gati*” and cultivate good “*gati*”.

9. Thus *Kāyānupassanā* basically means “catching ourselves before we say or do something wrong”.

- To put it in another way, what we need to accomplish with *kāyānupassanā* is to be aware of our speech and actions AT ALL TIMES. By now it must be clear why *satipaṭṭhāna* cannot be restricted to a “formal sitting down meditation session”.
- We say or do things in response to what we see, hear, smell, taste, touch, or think. The speech or actions have time delays from the time we get the “input” from outside or even if generated by the mind itself. Even if we start saying something bad, we can catch ourselves and stop (and apologize if we hurt someone’s feelings). Even if get up to hit someone, we can realize the bad consequences of such an action and immediately stop. That is how one starts.

10. With practice, one’s *gati* will change, and such awkward instances will occur less and less. There are many posts on “*gati*” at the site, and there are some in the meditation section under, “[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\)](#)”. *Satipaṭṭhāna* is basically a methodical way of doing *Ānāpānasati*. A scientific view is discussed in, “[How Habits are Formed and Broken – A Scientific View](#)”.

11. Therefore, it is easy to see that *kāyānupassanā* is the first and most important part of the *Catāro Satipaṭṭhāna*.

- When *kāyānupassanā* is practiced, one's "gati" will gradually change and one will start to calm down. And one will not REACT to feelings on an impulsive basis, and thus it will be easier to practice the next stage of "*vedānānupassanā*", i.e., "think about how to respond when certain feelings arise".
- When both those are practiced, "gati" will change to an extent that even initial thoughts will have "less venom", and thus it will be easier to practice "*cittānupassanā*" or "think morally" automatically.
- Finally, it will be easier to get into *samādhi* and to contemplate *anicca, dukkha, anatta* (or any other Dhamma concept), which is "*dhammānupassanā*".

12. Thus one starts with *kāyānupassanā* first and then moves on to other three "*anupassanā*". When one completes all four one completes the process and will have "*sammā sati*" in full, which leads to "*sammā samādhi*" in full, i.e., *Arahanthood*.

- Of course, that is normally accomplished in four stages, the first of which is the *Sotāpanna* stage.
- Just like it is not possible to attend middle school without attending primary school, or to take college courses without passing high school, one needs to go through the four steps methodically. One needs to control one's actions and speech first. That is what "*kāyānupassanā*" is about. We will discuss that in detail in the next post.
- This does not mean that one should not do the other three while doing *kāyānupassanā*; it just means there is "not much benefit" in doing the other three unless one is actively engaged in stopping the "BIG EIGHT" done with speech and body; see, "[2. The Basics in Meditation.](#)"
- And one does not stop doing *kāyānupassanā*, ever. It is not something to be done forcefully, it will become a habit. When one sees the benefits, one would want to advance. One just keeps incorporating the other three gradually and soon enough will be doing all four. But *kāyānupassanā* is the FOUNDATION.

Next, "[Kāyānupassanā – The Section on Postures \(Iriyapathapabba\)](#)",

17.4.3 Kāyānupassanā – Section on Postures (Iriyāpathapabba)

1. Let us first clarify what *kāyānupassanā* means. There are two interchangeably used meanings for "*kāya*": one is the body, the other is whatever is involved in "*kriya*" or "actions". In *kāyānupassanā* the latter is more general. This section on postures is based on body postures, but is still concerned with all "actions" done via all six senses. This will become clear as we proceed below.

- It is normally written as "*kāyānupassanā*", and is ALWAYS pronounced as "*kāyanupassana*".
- In interacting with the world, we see visuals (*rūpa*) with eyes, hear sounds with ears, smell odors with nose, taste with the tongue, touch (*pottabba*) with body, and think about concepts (*dhamma*) with the mind.
- Thus there are six internal "*kāya*", and six external "*kāya*" involved in experiencing the world. Thus we are concerned with both the internal sense faculties (*ajjhata*, pronounced "*ajjhaththa*") and the six external entities (*bahiddha*), while we are in any of the four main postures of sitting, standing, walking, or lying down.

2. When one starts on the Path, one does not need to believe in anything that the Buddha (or anybody else) said about the true nature of the world. One can start with a simple goal of "getting some peace of mind" or "get some relief from the day-to-day stresses of this world", i.e., get to the "*ātāpi*" stage.

- One can keep an open mind on whether there is rebirth or not, whether the concept of *kamma* is correct or not (of course one should not rule out those either; that would be "*niyata micchā diṭṭhi*" and one WILL NOT be able to make any progress); see, "[How do we Decide which View is Wrong View \(Diṭṭhi\)?](#)."

3. The Buddha said that the mind is burdened by greed, hate, and ignorance. It is not easy to see “the truth” (i.e., to remove ignorance) because the mind is normally “covered” by strong versions of greed and hate called “*kāmachanda*” (one becomes blind by greed) and “*vyāpāda*” (one keeps going downward with intense hate); **you can do keyword searches to find related posts.**

- And these two, *kāmachanda* and *vyāpāda* are the main culprits for making a mind stressful, and for causing “inside fires”. Thus by forcibly removing any thoughts of extreme greed and hate as they come to the mind, one can get relief in real time. One does not have to wait for “effects of *kamma* to materialize”. Such benefits will be there too, but one WILL be able to experience more immediate benefits.
- This is the beginning of “cooling down” or experiencing *nirāmisā sukha*, as explained in the post, “[Three Kinds of Happiness](#)”.

4. As explained in the previous post, “[Satipaṭṭhāna – Introduction](#)”, we start by disciplining our actions through speech and bodily actions, because they have a “time lag” and there is enough time to stop them willfully.

- We can start with the conventional five precepts. Without that basic discipline, one CANNOT get any kind of long-lasting peace of mind, no matter how much time one spends in meditation.
- If one is engaged in any of these five (intentional killing of living beings, stealing, sexual misconduct, lying, and using alcohol excessively or using drugs), and can abstain from them one should be able to experience the benefits of that in the near term.

5. After that one can tackle the BIG EIGHT (killing, stealing, sexual misconduct, lying, gossiping, slandering, harsh speech, and getting “drunk” with not only drugs or alcohol, but also with wealth, fame, power, etc); see, “[2. The Basics in Meditation](#)”.

6. The *kāyānupassanā* of the *satipaṭṭhāna* consists of six sections or “*pabba*”:

Anapānāpabba (section on “*ānāpāna*”),
Iriyāpathapabba (section on postures),
Sampajānapabba (section on habits),
Patikulamanasikārapabba (section on contemplation of body parts),
Dhatumanasikāra (section on contemplation of elements), and
Navasivathikapabba (section on contemplation of the decay of a body).

- We have already discussed *ānāpāna* in several posts, starting with “[7. What is Ānāpāna?](#).”

7. The “*Iriyāpathapabba*” section of the *Kāyānupassanā* in the *Satipaṭṭhāna sutta* is all about how to abstain from committing an immoral act AT ANY TIME.

- We have four postures or “*iriya*”: sitting, standing, walking, and in the sleeping position (laying flat).
- In any posture, we need to be vigilant on what we are about to do or speak. This is the beginning of “*satipaṭṭhāna*”, being “morally mindful” at all times.
- When a thought comes to mind to say something or to do something (whether sitting, standing, walking, or lying down), we need to get into the habit of contemplating their consequences.

8. For example, we may be walking on the street and see someone, whom we do not like, coming our way. If we get the tendency to say something bad, we have enough time to contemplate the bad consequences and stop saying those words.

- We may be lying in bed and getting bored, and may decide to go and see a friend to do some “gossiping” for fun. We have time to think about it and see whether we can use that time more productively.
- Sometimes we get “nasty e-mails”; someone pointing out an allegedly bad deed that we have done. We get that immediate “*tāpa*” or “heating up” in our heart because we get so perturbed by that false accusation. We tend to fire up an equally nasty e-mail back to that person. But we need to take time and

contemplate a better action. Give that person the benefit of the doubt; may be he/she did not do it to aggravate us, or truly was misled. Of course, there are people who do such things purposely to aggravate, but even then it is better to ignore it, rather than letting it develop into a worse situation. Learning to keep away from such troublemakers is a habit that we learn to develop. By responding in kind, it will not help quenching the “fires”.

9. We need to constantly ask ourselves “why am I going to do this? Why am I going to say this?”. **If the outcome of that action could hurt us or someone else, we need to think about a different way, or totally abandon it.**

- It is sad to see that many people waste their time “walking mindfully” one step at a time, just concentrating on taking each step, or “lifting their arm mindfully” This is the ‘*iriyāpathapabba*’ that is being practiced in most places. How can that procedure lead to a long-lasting peace of mind? Of course, just like doing breath meditation, it can make a person calm for the time being; that is the ONLY benefit.
- And it is not enough to do this in a formal session. This needs to become a habit (a keyword search can be done to find more on habits; developing habits is the key to change those all important “*gati*”). Buddha Dhamma is all about purifying the mind.

10. If one can do this for a week or so, one should be able to see a change in oneself; a sense of tranquility, a “peace of mind”. Of course some of you may be there already. We will discuss how to take the next step in the next post.

- When one is at this stage, it will be easier to get into *samādhi*, even if one is just doing the “breath meditation”. A moral mind is easy to be calmed. Many people do horrible acts on the spur-of-the-moment because they do not have this mindset or habit. Also see, “[Possible Outcomes of Meditation – Samādhi, Jhāna, Magga Phala.](#)”

Next, “[Kāyānupassanā – The Section on Habits \(Sampajānapabba\)](#)”,

17.4.4 Kāyānupassanā – The Section on Habits (Sampajānapabba)

Revised February 8, 2019

This is really an extension of the section on postures (*Iriyāpathapabba*) discussed in the previous post (“[Kāyānupassanā – Section on Postures \(Iriyāpathapabba\)](#)”), going into finer postures and activities. The key point is ultimately to become “sensitized” to each and every action that we take thus leading to the formation of “good habits”, i.e., to become a “*sampajānno*”.

1. One cannot start on this section until one has acquired discipline with the “bigger activities”. For example, if one is killing animals for fun, then there is no point in worrying about kicking a dog.

- As one gets some practice with abstaining from major offenses, one will become “sensitized”, i.e., one will start seeing minor offenses that one is about to make.

2. The relevant paragraph on the *Sampajānapabba* in the [WebLink: suttacentral: Mahā Satipatthāna Sutta \(DN 22\)](#) reads::

“*Puna ca param, bhikkhave, bhikkhu abhikkante patikkante sampajānakāri hoti, ālokite vilokite sampajānakāri hoti, saminjite pasārite sampajānakāri hoti, sanghātīpattacivaradhārane sampajānakāri hoti, asite pite khāyite sāyite sampajānakāri hoti, uccārapassāvakamme sampajānakāri hoti, gate thite nisinne sutte jāgarite bhāsīte tunhibhāve sampajānakāri hoti*”.

Here is the **mundane translation** (“[WebLink: tipitaka.org: The Great Discourse on the Establishing of Awareness](#)”), which is word by word:

- “Again, monks, a monk, while going forward or backward, he does so with constant thorough understanding of impermanence; whether he is looking straight ahead or looking sideways, he does so

with constant thorough understanding of impermanence; while he is bending or stretching, he does so with constant thorough understanding of impermanence; whether wearing his robes or carrying his bowl, he does so with constant thorough understanding of impermanence; whether he is eating, drinking, chewing or savoring, he does so with constant thorough understanding of impermanence; while attending to the calls of nature, he does so with constant thorough **understanding of impermanence**; whether he is walking, standing, sitting, sleeping or waking, speaking or in silence, he does so with constant thorough understanding of impermanence”.

3. Thus many possible “finer posture and actions” can be seen in the above direct translation, which are correct. The point is to be “morally mindful” in each and every such action, and not just to do those acts like a robot just in a formal setting as most people do.

- I am not sure where “impermanence” came from, apparently as the translation of the word, “*sampajāṅkāri*”. But as was explained in the post, “[Satipatthāna Sutta – Structure](#)”, *sampajāno* means knowing right from wrong (“*saṇ*”) via enhanced wisdom.
- Thus *sampajāṅkāri* means doing something the right way, and *sampajāṅkāri hoti* means developing a habit to do that.

4. When one goes into finer details on “being morally mindful” of one’s actions, one is not just concerned with killing, stealing, etc. One is also concerned about general welfare, that one should act with civility and be courteous to others: one should be wearing proper clothes appropriate for the occasion, when eating one should not be making inappropriate noises, while walking in a crowded street one should be mindful of the others and not throw one’s refuse on the roadside, etc.

- As I pointed out in the post, “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#)”, a *sutta* gives instructions in the “*niddesa*” or as a brief description. It needs to be EXPLAINED rather than doing a direct translation. Any *sutta* was originally delivered over a number of hours, and then summarized in a special way to make it brief and suitable for oral transmission.

5. A case in point is the direct translation of “*.uccārapassāvakamme sampajāṅkāri hoti*”, as “while attending to the calls of nature (going to the bathroom), he does so with constant thorough understanding of impermanence!” (from the conventional translation in #2 above).

- What is meant there is to act with decency and not to relieve oneself in an inappropriate place. In all those cases, *sampajāṅkāri hoti* means acting with diligence and prudence.

6. There are many other aspects too. For example, if one is about to take a nap in the middle of the day, one should be asking oneself why one needs to take nap. Unless one had engaged in some strenuous activity and really needs to get some rest, it is not a good habit to take unnecessary naps. Then it could become a habit, a bad one.

- We should also develop good habits. While walking on the street, it is good to help out those who need help, and to be courteous to others. A small thing like not spitting in a public place or just dropping trash anywhere one pleases can cause discomfort (and health problems) for others.
- Of course with each minor act we should also make sure it does not pan out to immoral activities. A good example is drinking too much. Drinking alcohol is not an *akusala kamma per se* (and there is nothing wrong with taking a drink in a social setting), but there is danger in getting intoxicated. [*per se* : [adverb] with respect to its inherent nature.]
- An intoxicated mind can be very dangerous; one could lose any sense of decency, and may get into situations that are immoral and offensive. Both drinking and smoking can be harmful to oneself and also to others.

7. As one develops good habits and gets rid of bad ones, **one becomes more and more “sensitized” and catch even minor mistakes. This is what is meant by “*patisamvedi*” (“*pati*” + “*saṇ*” “*vedi*”), i.e., becoming aware of “getting attached to a wrong mindset”.**

- At the same time, one will start seeing a big improvement in one's "inside fires", but one also becomes less prone to be aggravated or offended, and one becomes more forgiving to others.
- There are many posts at the site on habits, and how they can lead to *sansāric* habits and *āsavas*; developing good habits and getting rid of bad habits is key to "cooling down" in the short term as well as in the long term.
- Parents, teachers, and friends play key roles in a child's life, because a child's mind can be influenced by others in a good or bad ways, and can lead to lifelong habits. If the foundation is set right, then it will be easier for one to become a "*sampajānno*", one who is capable of "keeping fires under control".

8. This is what was meant by being a "*sampajānno*", and being able to "quench fires", i.e., "*ātāpi sampajāno*", which was a key phrase in the *uddesa* (brief description) of the *Satipaṭṭhāna sutta*; see, "[Satipaṭṭhāna Sutta – Structure](#)."

Next, "[Prerequisites for the Satipaṭṭhāna Bhāvanā](#)",

17.4.5 Prerequisites for the Satipaṭṭhāna Bhāvanā

As you may have noticed, I am not going to follow the *sutta* in the formal order. I would like to present it in a way that is conducive to the present day. However, at the end it will become clear that everything in the *sutta* has been discussed.

1. From the previous two posts it is clear that this meditation is **not just to be practiced in a formal session**, even though formal sessions can and should be done. In particular, *Dhammānupassana* needs to be done in formal sessions, which we will discuss shortly. With that in mind let us look at how the *sutta* begins (after the *uddesa* or the "brief description" section, to which we will get back later):

"*Kathaṃ ca pana, bhikkhave, bhikkhu kāye kāyanupassi viharati?*"

- Here and many other other places, "*ca*" is pronounced "cha".
- Here "*viharati*" means "to live". Thus what it says is, "Bhikkhus, what is meant by living with *kayanupassana* of the body (*kaye kayanupassana*)?"
- This should make it very clear that the *bhāvanā* is not just to be practised in a formal session; one has to "live it".

2. Now let us look at the next phrase that describes how to prepare for the *bhāvanā*:

"*Idha, bhikkhave, bhikkhu araṇṇa gato vā rukkhamūla gato vā suñṇāgāra gato vā nisidati pallankam ābhujitvā, ujum kāyam paṇidhāya, parimukhaṃ satiṃ upaṭṭhapetvā*".

- The conventional translation is something like, "Here a monk, having gone into the forest, or to the foot of a tree, or to an empty room, sits down cross-legged, keeps his body upright and fixes his awareness in the area around the mouth".
- Of course, this is a good thing to do if one is going to do a formal session, except that one should focus the awareness not "around the mouth" but on the object of contemplation as we will discuss later.

3. I pointed out in the introduction how the *sutta* (like most other *suttā*) was apparently designed to convey the above "conventional" meaning while keeping the deeper meaning hidden; see, "[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#)". This is a good example of how this was accomplished. Let us describe the above sentence in detail. However, I may not be able to go into such details for the rest of the *sutta*, because it will take up too much space.

Continuing with the interpretation of the phrase in #2, "*gato va*" means "get in to" or in the deeper sense, "get into the mindset".

- *Arañña* is a forest (or forest monastery). But the hidden meaning comes from “*rana*” which means “battle” and thus “*arañña*” means staying away from battles. Thus, “*arañña gato vā*” means “get into a calm mindset leaving behind the everyday battles”. In the conventional interpretation is says, “having gone into the forest”.
- “*rukka*” is “tree” and “*mūla*” is the “root”; even though the top of a tree sways back and forth with the wind, the tree trunk close to the root is very stable. Thus “*rukhamūla gato vā*” means getting to a stable mindset. In the conventional interpretation is says, “having gone to the foot of a tree”.

4. Next, “*suññāgāra*” is an empty building or room. The deeper meaning is that the mind should be empty of greed, hate, and ignorance. One should dispel any such thoughts that comes to the mind.

- Now comes, “*nisidati pallankam ābhujitvā*”, which is translated as, “sits down cross-legged”. The key word here is, “*anka*” or literally “number”; in Pāli or Sinhala, “reduce the number” or “*palla+anka*” means not giving importance. Thus “*nisidati pallankam ābhujitvā*” means, “being modest” and getting rid of any sense of “superiority”.
- And, “*ujum kāyam paṇidhāya*” is translated, “keeps his body upright”. In the deeper meaning, it is about being “straightforward” or forthright and honest.
- The post, “[Kāyānupassanā – Section on Postures \(Iriyāpathapabba\)](#),” describes how one needs to conduct *satipattāna* in all four postures (sitting, standing, walking, lying down), AND in numerous sub-postures; Therefore, the idea of “keeping the physical body upright” during *satipattāna* is a falsehood.

5. Finally, “*parimukham satim upaṭṭhapetvā*” is the KEY to *Satipattāna*: It is translated literally as “fixes his awareness in the area around the mouth”. What is actually meant is to keep the mind on the main object (called “*mukkha nimittā*”), i.e., “*Nibbāna*” or “cooling down”. “*Pari*” here means “complete” or “full”.

- Therefore, “*parimukham satim upaṭṭhapetvā*” means maintaining one’s focus on the main goal or *Nibbāna*.
- Thus what is described in that sentence is the required mindset for the meditator, whether he/she is going to be “meditating” in any one of the four postures described in the previous post, not just in a sitting down formal meditation session.

6. Thus the “preparation instructions” in that opening phrase can now be stated something like, “get into a calm and stable mindset that is devoid of greed, hate, and ignorance; keep a modest attitude without any sense of superiority; be forthright and honest, and keep the mind on the main object of cooling down”.

- Such a state of mind needs to be cultivated for all times. That is the key to cooling down on a long-term basis.
- Of course the conventional interpretation can also be used for sitting down, formal, sessions **without** “fixing awareness in the area around the mouth”. One ALWAYS focuses on cooling down, and becoming an “*ātāpi sampajanno*”; see, “[Satipattāna Sutta – Structure](#),” and “[Kāyānupassanā – The Section on Habits \(Sampajānapabba\)](#).”
- Thus the idea is for one to become a “firefighter” (“*ātāpī sampajāno*”), who is always on the lookout not for actual fires, but for those mental events that CAN LEAD TO mental fires in the future. These are basically any immoral acts, speech, or thoughts.

7. There are five sections or “*pabba*” in the *kāyānupassanā*. The reason that I described the *Iriyāpathapabba* (“section on postures”) and the *Sampajānapabba* (“section on habits”) in the previous posts was to emphasize the point that this *bhāvanā* cannot be restricted to a formal session. One could say, “How can I be meditating the whole day?”. This question arises only because of the misconceptions we have on what meditation or “*bhāvanā*” is.

- The Buddha said, “*bhavanaya bahuleekathaya*”, or “*bhāvanā* is what one does all the time”. It is about getting into the habit of developing good habits and getting rid of bad habits. [*bahulīkata*: [pp. of bahulīkaroti] took up seriously; increased. (adj.), practised frequently.]

- One can just make it a “formal session” in order to get into deeper levels of *samādhi* or *jhānā*.

8. Buddha Dhamma is not a religion in the sense of providing “salvation” by following certain rules or procedures. The Buddha said the only way to achieve long-lasting happiness is to purify the mind. It starts with avoiding the worst immoral acts of killing, stealing, etc. When one sees the benefits of that one can go a step further and include gossiping, slandering, etc. and so on.

- The more one purifies one's mind, the true nature of this world will become increasingly clear. One cannot read about it in one essay or even many essays. One has to put it into action. Even though it is good to read about *anicca*, *dukkha*, *anatta*, it is not possible to “get it” until one purifies one's mind to a certain extent AND experiences the “cooling down” that results from a purified mind; this will be discussed in the *Dhammānupassana*.

9. *Satipaṭṭhāna sutta* describes a very methodical way of following the Path prescribed by the Buddha. **Initially, one does not even have to worry about whether rebirth is valid or whether there are 31 realms of existence.** One just focuses on realizing that there are “internal fires” (*ātāpi*) that we are not even aware of; see “[Satipaṭṭhāna Sutta – Structure](#).”

- As one purifies the mind, one can clearly see and FEEL these fires and how they start. When one clears up the “big fires” one is able to see and feel smaller ones; one becomes more “sensitized”. And then one tackles those smaller fires. It is a gradual, step-by-step process. That is why it is called the Path. The higher one climbs on the Path, the more one can “see” and get rid of, and more happier one becomes.

Next, “[What is “Kāya” in Kāyānupassanā?](#)”,

17.4.6 What is “Kāya” in Kāyānupassanā?

Revised May 20, 2018; February 17, 2019

1. There are two meanings to “*kāya*”: one is “*kāya*” for the body, and the other “*kāya*” means “collections” or “aggregates” of anything: *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, or *viññāṇa*.

- “*Sabba*” means all. Therefore, “*sabba kāya*” is the same as “*pañcakkhandha*”; see, “[Five Aggregates – Introduction](#),” and follow-up posts.
- In the *Satipaṭṭhāna Sutta*, one contemplates on the five aggregates via four categories (*kāyānupassanā*, *vedanānupassanā*, *cittānupassanā*, and *dhammānupassanā*).
- *Kāyānupassanā* deals mostly with bodily actions (i.e., regarding *kāya*). But “*kāya*” + “*anupassanā*” rhymes as “*kāyānupassanā*”; see, “[Satipaṭṭhāna – Introduction](#).”

2. We experience pictures, sounds, smells, tastes, touch (which are all different types of *rūpa*), and *dhammā* (things which we think about).

- **Note that *dhammā* are different from *dhamma* (without the long “a” at the end) in Buddha Dhamma; the latter *dhamma* refers to “teachings of the Buddha”.**
- Even though “*rūpa*” is commonly used to describe “material objects” (which are really “*vanna rūpa*” or “*rūpa rūpa*”), *rūpa* includes sounds (*sadda rūpa*), smells (*gandha rūpa*), tastes (*rasa rūpa*), and touch (*phoṭṭhabba rūpa*).
- **I will just use the term “*rūpa*” to include sounds, smells, tastes, and touch as well as pictures for the rest of the post.**
- *Dhammā* are a type of *rūpa* too; but they are below the *suddhaṭṭhaka* stage and “cannot be seen or touched”: “*anidassanaṃ, appaṭighaṃ, dhammāyatana pariyāpanna rūpaṃ*”; see, “[What are rūpa? – Dhammā are rūpa too!](#).”

3. Something is a picture or a visual object only when one is seeing it. A moment later it is only a memory, and it is now a “memory of an old picture”. If we visualize a house that we are building, that is also a picture in the memory plane, an “envisioned future picture”.

- In the [WebLink: suttacentral: Anatta Lakkha Sutta \(SN 22.59\)](#), “all *rūpa*” are described as 11 categories: “*Tasmātiha, bhikkhave, yaṃ kiñci rūpaṃ atītānāgatapaccuppannaṃ ajjhattaṃ vā bahiddhā vā oḷārikaṃ vā sukhumaṃ vā hīnaṃ vā paṇītaṃ vā yaṃ dūre santike vā, sabbaṃ rūpaṃ..*”. They are past, present, future, near, far, likable, distasteful, fine (not strong), coarse (strong), internal, and external; see also, “[Five Aggregates – Introduction](#).”
- For example, feelings (*vedanā*) *khandha* can be any in the 11 categories. Here, near and far means recent or way back in the past. Internal is one’s own and external is feelings of the others; one needs to be aware of other’s feelings in the sense that “if I do this, it could cause a feeling of grief to so and so”, as an example.

4. It is good to contemplate on these concepts and have a good idea of how different representations mean the same things: *Pañcakkhandha* is the same as “*sabba kāya*”, both include “everything in this world”. Please send me a comment if this is not clear. Many people think “*kāyānupassanā*” is just about one’s body, and that is not correct.

- But we don’t think about the “whole world” out there either. We think about a tiny fraction of that “world out there”. **AND we get attached to (*taṇhā*) even a smaller fraction.**
- Thus even though *pañcakkhandha* (five aggregates) is unimaginably large, the fraction of *pañcakkhandha* that we interact with or think about is very small. **And we form attachments (via greed or hate) to even smaller fraction**, and this is the *pañcupādānakkhandha*, the aggregates that we attach to with greed and hate (and ignorance). *Upādāna* means “drawn to”, and that is what one grasps willingly because one thinks there is happiness in them.

5. For example, we all know about the zillions of stars out there, or about the other planets in our Solar system; but do not generate any greed or hate about them. We only attach to **some of the pictures**, sounds, smells, tastes, and touch that we interact with daily, which is indeed a tiny, tiny fraction of the “world out there”. The biggest component of our “*pañcupādānakkhandha*” is the dhamma aggregate, the things we think about. Let us discuss this a bit more.

- **Thus here we are concerned with only a tiny fraction of “*sabba kāya*”: Only those that lead to greed, hate, or ignorance. This is the same as *pañcupādānakkhandha*, which is a tiny fraction of *pañcakkhandha*.**

6. When we contemplate on this a bit more, we realize that most of the pictures, sounds, smells, tastes, and touch we think about belonging to the ***dhammā*** category; see #2 above..

- A long series of thoughts may start with an “old picture” that is in our memory (say an old friend), and then we start generating more thoughts about that person, and then we get into something altogether different: We may think about the nice neighborhood that person is living in and then start thinking about building a house there. Thus we may end up thinking (generating *saṅkhāra*) about something totally different. Thus it now belongs to the *dhammā* category.
- Later, we need to focus on such thoughts and dhamma in the “*cittānupassanā*” and “*dhammānupassanā*”. What we need to do in “*kāyānupassanā*” is to mainly control our speech and actions first. This way we will be able to slowly change our habits (*gathi*) and start controlling our “automatic actions” that we used to do almost on impulse.

7. We already discussed how we need to be “morally mindful” while we are in any of the four main postures (*Iriyapathapabba*), and also in any of “sub-postures” or basically any movement (*sampajānapabba*).

- For example, we see a likable picture (a person or an item) we need to immediately think about whether it is appropriate to take the action that automatically comes to our mind with our old habits. We may be waiting at the airport for the next flight and see a bar; instead of going there and have a drink, it may be more productive to get on to the internet and read something useful. It is more productive to take a nap if one is really tired.

- In another example, someone may come to you and accuse you of doing something wrong. Instead of just retaliating, it may be a good idea to calm down and listen to that person first to see whether you have indeed done something unknowingly to aggravate that person.

8. As we discussed in the post, “[4. What do all these Different Meditation Techniques Mean?](#),” *Anupassanā* means “discard according to the principles learned” (“*anu*” means according to and “*passanā*” means to get rid of). We need to logically think of what would happen if a certain action is taken. If that seems to lead to a “bad ending” we need to discard it.

- Thus “*kāyānupassanā*” in the *iriyāpatapabba* and the *sampajānapabba* means to contemplate on the moral consequences of an act one is about to do and abstain from doing it if it seems to have bad consequences.

9. Now, there are three sections in the *kāyānupassanā* where one specifically contemplates on the physical body. These are *patikulamanasikara pabba*, *dhatumanasikāra pabba*, and *navasivathika pabba*. These sections involve just contemplating on the nature of our physical bodies.

- In the *patikulamanasikara pabba* the 32 parts of the body are discussed. Those body parts are not very appealing when separated from each other. It is amazing how our bad perception of hair in the dinner plate is so different from the admiration we have for the hair that is attached to our head. The hair in the plate could be one of our own, but still, we do not like it.
- The nail on the finger is something we admire, take care and sometimes paint too. But as soon as it is cut, it becomes something not appealing.

10. What we form a liking for is the “whole complete package” with all 32 parts that are in “good condition”. We get distraught when hair starts greying, or the skin starts sagging. A beautiful person may become ugly in an instant if the face becomes disfigured due to some mishap.

The reality is that all the above IS GOING TO HAPPEN to us in the future. As long as there is birth, there is decay and death.

11. The section (*pabba*) on *dhatumanasikāra pabba* is to contemplate on the fact that all our bodies are composed of just four entities. They are *pathavi* (solidness), *āpo* (liquid-ness/tendency to bind together), *tejo* (heat or warmth), *vāyo* (wind). Out of the six *dhātu*, *ākāsa* (space) is there too, but *viññāṇa* (consciousness) does not belong to the physical body.

- Those four things make all bodies — whether beautiful or ugly. There is nothing special.

12. The third section (*pabba*) of the physical body, *navasivathika pabba*, is to contemplate on what happens to a dead body over the course of many months if left out on the ground to decay. (That was commonly done at the time of the Buddha).

- Again, whether it is a body of a homeless person or an emperor, the same decay process will take place. Eventually, all body parts will be absorbed to the ground or released to the air.

13. All three of those sections are to help us lose attachments to our physical bodies. The purpose is NOT to get distraught but to develop the wisdom to realize that it is common to us all and will happen.

- A major component of our suffering arises when we eventually realize that we cannot maintain things to our satisfaction. Most people do not like to think about this inevitability. They just want to “whatever it takes” to maintain a beautiful body. The more one does that, the more one will be depressed later.
- Instead what we should do is try to maintain a healthy body by eating well and sticking to a good exercise program. It is not “eye catching aspect” that matters more. One should be more concerned with the health of the body.
- Eating healthy foods and exercising regularly (see, “[“Spark” by John Ratey](#)”) will keep the body and the mind in good condition, so that we will have enough time to at least get to the *Sotāpanna* stage of Nibbāna.

14. It is important to remember that in all these “*anupassanā*,” we need to contemplate on the Three Characteristics of nature (*anicca, dukkha, anatta*) when we contemplate on the unfruitfulness in attaching to “things and concepts”.

- Also, it is important to examine the potentially “bad outcomes” of immoral and unwise actions. We should also think about the wisdom of our stressful attempts to try to maintain our body appearances. (Especially using artificial techniques like botox). The sooner we realize this, the less stressful it will be.

15. Finally, in those three sections on the body, *patikulamanasikara pabba*, *dhatumanasikāra pabba*, and *navasivathika pabba*, we need to contemplate on not only our own body (this is what *ajjhatta* means in these three sections), but also on the bodies of others (this is what *bahiddhā* means in these three sections).

- We can not only contemplate on other humans (famous, poor, rich, young, old, etc), but also on animals. It does not matter who or what it is, we all will eventually become dust. But, for many, this realization comes only after going through much effort in vain to keep the body “beautiful” via artificial means; then it could be too late.
- Therefore, *ajjhatta* and *bahiddhā* means somewhat different things in these three sections compared to other sections.

17.5 Mahā Cattārīsaka Sutta (Discourse on the Great Forty)

Revised April 3, 2016; Re-revised May 6, 2017; November 27, 2017; December 17, 2017; February 26, 2018; October 23, 2021; December 21, 2021; August 20, 2022

The [WebLink: suttacentral: Mahācattārīsaka Sutta \(MN 117\)](#) discusses two eightfold paths: A mundane path that leads to rebirth in the “good realms” (at or above the human realm) and the Noble Eightfold Path that leads to *Nibbāna*.

1. All *suttā*, in one way or another describe the Path to *Nibbāna*; there are many ways to analyze the Path.
 - In this *sutta*, the emphasis is on the twenty “good factors,” ten leading to “good rebirths” and ten leading to *Nibbāna* (*Cooling Down of the mind*). The negative twenty factors direct one away from *Nibbāna* (trapped in the four lowest realms or *apāyā*).
2. The Path to *Nibbāna* is *sīla* (virtue), *samādhi* (moral concentration), and *paññā* (wisdom).
 - Without some wisdom one will not even start thinking about the Path. No matter how much they listen to or read about the Buddha’s message, some people cannot see any benefit from it. Such people have no *samsāric* habit (“*gatī*”) built up from past lives, and their minds are covered; this is the strong form of *avijjā* called *moha*.
 - Therefore, without some level of wisdom (or *paññā*, not “book knowledge”), it is not possible to “see the Path.” When we talk about “seeing the Path,” it is not “seeing with the eyes”; it is “seeing with wisdom.”
 - The correct order is to start with *Sīla*, *Samādhi*, and *Paññā* in the mundane Eightfold Path. That helps one understand the *Tilakkhaṇa* (*anicca*, *dukkha*, and *anatta*.)
 - Then with that higher level of *paññā* one can start on the Noble or *Lokuttara* Eightfold Path. Thus, now the order is *Paññā*, *Sīla*, *Samādhi*. That leads to *Sammā Ñāṇa* and *Sammā Vimutti* (*Arahantship*). These are the ten factors for *Nibbāna*. This is discussed in “[Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi](#).”
3. There are four kinds of “seeing” that are progressively attained in the following order: **strong *micchā diṭṭhi* and engaging in *pāpa kamma* (people like serial killers)**, moral people with some types of *micchā diṭṭhi* (most people today belong to this category), **after getting rid of 10 types of *micchā diṭṭhi***, and transcendental *Sammā Diṭṭhi* (comprehending *anicca*, *dukkha*, *anatta* or vision for attaining *Nibbāna*).

When the mind is covered with defilements (when one has *moha*), one is likely to believe in all or some of the ten types of *micchā diṭṭhi*:

1. no benefits in giving. [*natthi dinnam*]
2. no benefits in fulfilling one’s responsibilities. [*natthi yijñham*]
3. respecting and making offerings to those with higher virtues has no merits. [*natthi hutam*]
4. *kamma* or deeds do not have good and bad *vipāka*. [*natthi sukata-dukkatāṇam kammānam phalam vipāko*]
5. this world does not exist. [*natthi ayam loko*]
6. *para loka* or the world of *gandhabba* does not exist. [*natthi paro loko*]
7. mother is not a special person. [*natthi mātā*]
8. father is not a special person. [*natthi pitā*]
9. no instantaneous (*opapātikā*) births in other realms. [*natthi sattā opapātikā*]
10. there are no *samana brahmana* (basically *Ariyā* or *yogis*) who have cultivated their minds to be free of defilements and thus can see other realms and previous births. [*natthi loka*]

samaṇabrāhmaṇā sammaggaṭā sammāpaṭipannā ye imaṇca lokam paraṇca lokam sayam abhiññā sacchikatvā pavedentī]

[[WebLink: suttacentral: AN 3.117. Vipattisampadāsutta - Distress and Attainment Sutta](#) ‘(1) natthi dinnam, (2) natthi yiṭṭham, (3) natthi hutam, (4) natthi sukata dukkaṭānam, kammānam phalam vipāko, (5) natthi ayam loko, (6) natthi paro loko, (7) natthi mātā, (8) natthi pitā, (9) natthi sattā opapātikā, (10) natthi loke samaṇabrāhmaṇā sammaggaṭā sammāpaṭipannā ye imaṇca lokam paraṇca lokam sayam abhiññā sacchikatvā pavedentī’]

See “[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#),” and “[Hidden World of the Gandhabba: Netherworld \(Paraloka\)](#)” for a discussion on *para loka*.

4. The ten wrong actions contributing to one’s downfall (*akusala kamma*) RESULT FROM the above ten wrong views.

- One is not likely to see the consequences of immoral thoughts and intentions (*micchā saṅkappa*) in 3 categories: sensual lust (*kāmacchanda*), ill-will (*vyāpāda*), violence (*himsā*).
- Thus one will utter four types of *micchā vācā* or wrong speech: lying (*musāvāda*), slandering (*pisuṇāvācā*), harsh speech (*pharusāvācā*), and empty speech (*samphappalāpa*).
- And one will engage in 3 types of immoral bodily actions (*micchā kammanta*): killing living beings (*pāṇātipātā*), taking the not-given (*adinnādānā*), sexual misconduct, and other extreme sensual activities (*kāmesu micchācārā*).

5. The more one does those ten defiled actions by the mind, speech, and body, the stronger one’s conviction of the ten types of *micchā diṭṭhi* will become. Thus one will be trapped in a downward Path.

- Thus one will be engaged in immoral livelihoods (*micchā ājīva*), make an effort in such activities (*micchā vāyāma*), build-up that mindset (*micchā sati*), and solidify that kind of mindset (*micchā samādhī*).
- Those in turn will strengthen *micchā diṭṭhi*, *micchā saṅkappa*, *micchā vācā*, *micchā kammanta*.
- And so it continues, pushing one in a downward spiral.

6. Therefore, those two sets of ten factors will lead one in the wrong way towards unimaginable suffering in future lives, and it will be tough to break away from them.

- Sometimes acts of occasional kindness or charity could open one’s mind to the truth. That is probably the reason for the order: *sīla*, *samādhī*, *paññā*. Even an occasional act of virtue (*sīla*) can get one oriented in the right direction.

7. As one removes more and more types of *micchā diṭṭhi*, one will start gaining *Sammā Diṭṭhi*, which means not having those ten types of *micchā diṭṭhi*.

- With the ten types of *micchā diṭṭhi* removed, one starts comprehending the correct interpretations of *anicca*, *dukkha*, and *anatta*. Of course, it will not help if *anicca* is interpreted as just “impermanence” and *anatta* as “no-self.”
- It is just like taking medicine to cure a disease. If one is taking the wrong medication, no matter how long one takes it, that will not help.

8. So, the *sutta* explains that there are two types of *Sammā Diṭṭhi*: **mundane (*lokiya*) and deeper insight (*lokuttara*)**.

Initially, one sees the perils of *micchā diṭṭhi* (and associated immoral acts), and starts turning to mundane *Sammā Diṭṭhi*: One sees that things happen for a reason, and one could get into bad situations and bad births by doing immoral acts. One is motivated to do moral deeds and to seek good rebirths. Now one does not have *moha* but just *avijjā*.

- Thus one starts thinking moral thoughts (*Sammā Saṅkappa*) and abstains from immoral speech and deeds (*Sammā Vācā* and *Sammā Kammanta*).
- Thus one will be engaged in moral livelihoods (*Sammā Ājīva*), make an effort in such activities (*Sammā Vāyāma*), build up that mindset (*sammā sati*), and solidify that kind of mindset (*Sammā Samādhi*).
- These eight factors constitute the **mundane Eightfold Path**. One will be making progress towards “good rebirths.”

9. It is essential to realize that one on the **mundane Eightfold Path** will willfully abstain from the strong versions of *dasa akusala*. That would become automatic with comprehension of *Tilakkhaṇa* in the **Noble Eightfold Path**.

- See the “[WebLink: suttacentral: Mahā Cattārīsaka Sutta \(MN 117\)](#).”
- Even though the English translation there is not that good, this fact is apparent in the English translation in the above link.

10. Then, some of those on the mundane Eightfold Path will start seeing the unique message of the Buddha, which says that one can NEVER find permanent happiness in this world (*lokiya*). [*lokiya* : [adj.] worldly; mundane.]

- Even if one makes sure to avoid the four lower realms (*apāyā*) in the next birth by following the mundane Eightfold Path, one will not be assured of anything in the births after that. Because we have no idea under what circumstances we will be born in the next life, even if it is human.
- Of course, one needs to know the correct version of *Tilakkhaṇa*.

11. As long as one has not attained the *Sotāpanna* stage of *Nibbāna*, it is inevitable that one is likely to be born in the *apāyā* in the future.

- Thus, as long as we are born anywhere in these 31 realms, it will eventually lead to *dukkha* (suffering).
- Thus it is unfruitful to strive for such mundane happiness as a human, *deva*, or *Brahma*. In the long run, none of those births will provide permanent happiness. We cannot maintain anything to our satisfaction in the long run anywhere. That is the concept of *anicca*.
- The concept of *anatta* is that there is no place in the whole wider world of 31 realms where one could find refuge.

12. The realization of these three characteristics (*anicca*, *dukkha*, and *anatta*) of this world (*loka*) is the point at which one grasps the **lokuttara Sammā Dīṭṭhi**.

- Then one starts thinking moral thoughts (*Sammā Saṅkappa*) on how to remove suffering FOREVER. One is not interested in merely seeking “good rebirths” because one realizes the futility of such efforts in the long term. This is **lokuttara sammā saṅkappa**.
- One stops uttering immoral speech (and gets to *Sammā Vācā*) and abstains from immoral deeds (to *Sammā Kammanta*) because one realizes that there is NO POINT in doing those things, not just because they lead to bad births. They are now **lokuttara Sammā Vācā** and **lokuttara Sammā Kammanta**.
- These in turn will lead to **lokuttara** types of *Sammā Ājīva*, *Sammā Vāyāma*, *Sammā Sati*, and *Sammā Samādhi*.
- These eight factors constitute the **lokuttara Noble Eightfold Path** that will take one progressively to stages of “higher cooling down” or *Nibbāna* starting with the *Sotāpanna* stage and ending in the *Arahant* stage.
- *Avijjā* is gradually dispelled starting at the *Sotāpanna* stage and completely removed at the *Arahant* stage; simultaneously, wisdom (*paññā*) grows and becomes complete at the *Arahant* stage.

13. The uniqueness of Buddha Dhamma lies in the **lokuttara Noble Eightfold Path**. Other religions focus on “how to live a moral life,” which is more like the **mundane Eightfold Path**.

- Buddha Dhamma says living a moral life is not enough to attain permanent happiness (because life in the heavens or *Deva loka* is not endless according to Buddha Dhamma). Ultimately, it requires relinquishing all desires for worldly things.
- But the mindset to seek *Nibbāna* via “relinquishing all desires for worldly things” is not even possible until one makes progress on the **mundane Noble Eightfold Path**. The mind needs to be purified to some extent to comprehend *Tilakkhaṇa*.
- Throughout most of the recent past, the genuine **lokuttara Noble Eightfold Path** had been hidden together with the world’s true nature as described by the real meanings of *anicca*, *dukkha*, and *anatta*; most people have been practicing the **mundane Eightfold Path**. It is easy for most people to connect with the **mundane Eightfold Path** simply because it is mundane, i.e., an average human is already comfortable with such concepts.
- But as the Buddha said, his Dhamma “had never been heard before...”, as he emphasized in the *Dhammacakkappavattana sutta*: “*pubbe ananussutesu dhammesu....*”

14. In summary, the forty factors exist because there are four pathways, each with ten outcomes. (i) Two types of wrong paths (one with ten types of *micchā diṭṭhi* and another with strong *micchā diṭṭhi* with immoral behavior,) (ii) Two types of “good paths” (one after getting rid of ten types of *micchā diṭṭhi* and the next with starting to comprehend *anicca*, *dukkha*, *anatta*).

- The ten outcomes in the Noble Path are: *Sammā Diṭṭhi*, *Sammā Saṅkappa*, *Sammā Vācā*, *Sammā Kammanta*, *Sammā Ājīva*, *Sammā Vāyāma*, *Sammā Sati*, *Sammā Samādhi*, *Sammā Nāṇa*, and *Sammā Vimutti* (Arahantship).
- Towards the end of the Buddha says, “*Iti kho, bhikkhave, aṭṭhaṅgasamannāgato sekkho, dasaṅgasamannāgato arahā hoti..*” **Translated:** “Thus, *bhikkhus*, the path of the disciple in higher training (*Sotāpanna*, *Sakadāgāmi*, *Anāgāmi*) possesses eight factors, and the *Arahant* possesses ten factors, and the *Arahant* possesses ten factors.”
- The other three paths have corresponding ten outcomes, leading to good or bad results, but provide no permanent solution (of course, the bad ones lead to unimaginable suffering).

15. The *Pāli* version of the *sutta* — as well as translations in several languages — is available at: [WebLink: suttacentral: Mahā Cattārīsaka Sutta](#).

- However, those translations are not complete, as mentioned above. In particular, they do not discuss the distinction between the two types of *Sammā Diṭṭhi*, etc., and the two types of eightfold paths there. That is because the translators don’t understand the importance of the correct interpretation of *Tilakkhaṇa*.

16. Finally, another way to analyze this step-by-step process is at: “[Micchā Ditthi, Gandhabba, and Sotāpanna Stage](#).”

17.5.1 Mahācattārīsaka Sutta

Majjhima Nikāya 117

Mahācattārīsakasutta

Evam me sutam— ekaṃ samayaṃ bhagavā sāvatthiyaṃ viharati jetavane anāthapiṇḍikassa ārāme. Tatra kho bhagavā bhikkhū āmantesi: “bhikkhavo”ti. “Bhadante”ti te bhikkhū bhagavato paccassosuṃ. Bhagavā etadavoca: “ariyaṃ vo, bhikkhave, sammāsamādhiraṃ desessāmi saupanisaṃ saparikkhāraṃ. Taṃ suṇātha, sādhukaṃ manasi karotha, bhāssissāmi”ti. “Evam, bhante”ti kho te bhikkhū bhagavato paccassosuṃ. Bhagavā etadavoca:

“Katamo ca, bhikkhave, ariyo sammāsamādhi saupaniso saparikkhāro? Seyyathidaṃ— sammādiṭṭhi, sammāsaṅkappo, sammāvācā, sammākammanto, sammāājīvo, sammāvāyāmo, sammāsati; yā kho, bhikkhave, imehi sattahaṅgehi cittaṃ ekaggatā parikkhatā—ayaṃ vuccati, bhikkhave, ariyo sammāsamādhi saupaniso itipi, saparikkhāro itipi. Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṇca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Micchādiṭṭhiṃ ‘micchādiṭṭhi’ ti pajānāti, sammādiṭṭhiṃ ‘sammādiṭṭhi’ ti pajānāti—sāssa hoti sammādiṭṭhi.

Katamā ca, bhikkhave, micchādiṭṭhi? ‘Natthi dinnam, natthi yittam, natthi hutam, natthi sukata dukkaṭānaṃ kammānaṃ phalaṃ vipāko, natthi ayaṃ loko, natthi paro loko, natthi mātā, natthi pitā, natthi sattā opapātikā, natthi loka samaṇabrāhmaṇā sammaggatā sammāpaṭipannā ye imaṇca lokāṃ paraṇca lokāṃ sayāṃ abhiññā sacchikatvā pavedentī’ ti—ayaṃ, bhikkhave, micchādiṭṭhi.

Katamā ca, bhikkhave, sammādiṭṭhi? Sammādiṭṭhipaharā, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammādiṭṭhi sāsava puñṇabhāgiyā upadhivepakkā; atthi, bhikkhave, sammādiṭṭhi ariyā anāsava lokuttarā maggaṅgā. Katamā ca, bhikkhave, sammādiṭṭhi sāsava puñṇabhāgiyā upadhivepakkā? ‘Atthi dinnam, atthi yittam, atthi hutam, atthi sukata dukkaṭānaṃ kammānaṃ phalaṃ vipāko, atthi ayaṃ loko, atthi paro loko, atthi mātā, atthi pitā, atthi sattā opapātikā, atthi loka samaṇabrāhmaṇā sammaggatā sammāpaṭipannā ye imaṇca lokāṃ paraṇca lokāṃ sayāṃ abhiññā sacchikatvā pavedentī’ ti—ayaṃ, bhikkhave, sammādiṭṭhi sāsava puñṇabhāgiyā upadhivepakkā.

Katamā ca, bhikkhave, sammādiṭṭhi ariyā anāsava lokuttarā maggaṅgā? Yā kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato paññā paññindriyaṃ paññābalaṃ dhamma-vicayasambojjhaṅgo sammādiṭṭhi maggaṅgaṃ—ayaṃ vuccati, bhikkhave, sammādiṭṭhi ariyā anāsava lokuttarā maggaṅgā. So micchādiṭṭhiyā pahānāya vāyamati, sammādiṭṭhiyā, upasampadāya, svāssa hoti sammāvāyāmo. So sato micchādiṭṭhiṃ pajahati, sato sammādiṭṭhiṃ upasampajja viharati, sāssa hoti sammāsati. Itiyime tayo dhammā sammādiṭṭhiṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṇca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Micchāsaṅkappaṃ ‘micchāsaṅkappo’ ti pajānāti, sammāsaṅkappaṃ ‘sammāsaṅkappo’ ti pajānāti, sāssa hoti sammādiṭṭhi.

Katamo ca, bhikkhave, micchāsaṅkappo? Kāmasaṅkappo, byāpādasāṅkappo, vihiṃsāsaṅkappo—ayaṃ, bhikkhave, micchāsaṅkappo.

Katamo ca, bhikkhave, sammāsaṅkappo? Sammāsaṅkappampaharā, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammāsaṅkappo sāsavo puñṇabhāgiyo upadhivepakko; atthi, bhikkhave, sammāsaṅkappo ariyo anāsavo lokuttaro maggaṅgo. Katamo ca, bhikkhave, sammāsaṅkappo sāsavo puñṇabhāgiyo upadhivepakko? Nekkhammasāṅkappo, abyāpādasāṅkappo, avihiṃsāsaṅkappo: ‘ayaṃ, bhikkhave, sammāsaṅkappo sāsavo puñṇabhāgiyo upadhivepakko’.

Katamo ca, bhikkhave, sammāsaṅkappo ariyo anāsavo lokuttaro maggaṅgo? Yo kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato takko vitakko saṅkappo appanā byappanā cetaso abhiniropanā vacīsaṅkhāro—ayaṃ, bhikkhave, sammāsaṅkappo ariyo anāsavo lokuttaro maggaṅgo. So micchāsaṅkappassa pahānāya vāyamati, sammāsaṅkappassa upasampadāya, svāssa hoti sammāvāyāmo. So sato micchāsaṅkappaṃ pajahati, sato sammāsaṅkappaṃ upasampajja viharati; sāssa hoti sammāsati. Itiyime tayo dhammā sammāsaṅkappaṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṇca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Micchāvācāṃ ‘micchāvācā’ ti pajānāti, sammāvācāṃ ‘sammāvācā’ ti pajānāti; sāssa hoti sammādiṭṭhi. Katamā ca, bhikkhave, micchāvācā? Musāvādo, piṣuṇā vācā, pharusā vācā, samphappalāpo—ayaṃ, bhikkhave, micchāvācā. Katamā ca, bhikkhave, sammāvācā? Sammāvācāmpaharā, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammāvācā sāsava puñṇabhāgiyā upadhivepakkā; atthi, bhikkhave, sammāvācā ariyā anāsava

lokuttarā maggaṅgā. Katamā ca, bhikkhave, sammāvācā sāsavā puññabhāgiyā upadhivepakka? Musāvādā veramaṇī, piṣuṇāya vācāya veramaṇī, pharusāya vācāya veramaṇī, samphappalāpā veramaṇī—ayaṃ, bhikkhave, sammāvācā sāsavā puññabhāgiyā upadhivepakka. Katamā ca, bhikkhave, sammāvācā ariyā anāsavā lokuttarā maggaṅgā? Yā kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato catūhi vacīduccaritehi āraṭi virati paṭivirati veramaṇī—ayaṃ, bhikkhave, sammāvācā ariyā anāsavā lokuttarā maggaṅgā. So micchāvācāya pahānāya vāyamati, sammāvācāya upasampadāya; svāssa hoti sammāvāyāmo. So sato micchāvācaṃ pajahati, sato sammāvācaṃ upasampajja viharati; sāssa hoti sammāsati. Itiyime tayo dhammā sammāvācaṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṇca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? - Micchākammantaṃ ‘micchākammanto’ ti pajānāti, sammākammantaṃ ‘sammākammanto’ ti pajānāti; sāssa hoti sammādiṭṭhi. Katamo ca, bhikkhave, micchākammanto? Pāṇātipāto, adinnādānaṃ, kāmesumicchācāro—ayaṃ, bhikkhave, micchākammanto. Katamo ca, bhikkhave, sammākammanto? Sammākammantaṃ pahānaṃ, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammākammanto sāsavo puññabhāgiyo upadhivepakko; atthi, bhikkhave, sammākammanto ariyo anāsavo lokuttaro maggaṅgo. Katamo ca, bhikkhave, sammākammanto sāsavo puññabhāgiyo upadhivepakko? Pāṇātipātā veramaṇī, adinnādāna veramaṇī, kāmesumicchācārā veramaṇī—ayaṃ, bhikkhave, sammākammanto sāsavo puññabhāgiyo upadhivepakko. Katamo ca, bhikkhave, sammākammanto ariyo anāsavo lokuttaro maggaṅgo? Yā kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato tīhi kāyaduccaritehi āraṭi virati paṭivirati veramaṇī—ayaṃ, bhikkhave, sammākammanto ariyo anāsavo lokuttaro maggaṅgo. So - micchākammantassa pahānāya vāyamati, sammākammantassa upasampadāya; svāssa hoti sammāvāyāmo. So sato micchākammantaṃ pajahati, sato sammākammantaṃ upasampajja viharati; sāssa hoti sammāsati. Itiyime tayo dhammā sammākammantaṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṇca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Micchāājīvaṃ ‘micchāājīvo’ ti pajānāti, sammāājīvaṃ ‘sammāājīvo’ ti pajānāti; sāssa hoti sammādiṭṭhi. Katamo ca, bhikkhave, micchāājīvo? Kuhanā, lapanā, nemittikatā, nippesikatā, lābhena lābhaṃ nijjīsanatā—ayaṃ, bhikkhave, micchāājīvo. Katamo ca, bhikkhave, sammāājīvo? Sammāājīvampahānaṃ, bhikkhave, dvāyaṃ vadāmi—atthi, bhikkhave, sammāājīvo sāsavo puññabhāgiyo upadhivepakko; atthi, bhikkhave, sammāājīvo ariyo anāsavo lokuttaro maggaṅgo. Katamo ca, bhikkhave, sammāājīvo sāsavo puññabhāgiyo upadhivepakko? Idha, bhikkhave, ariyasāvako micchāājīvaṃ pahāya sammāājīvena jīvikaṃ kappeti—ayaṃ, bhikkhave, sammāājīvo sāsavo puññabhāgiyo upadhivepakko. Katamo ca, bhikkhave, sammāājīvo ariyo anāsavo lokuttaro maggaṅgo? Yā kho, bhikkhave, ariyacittassa anāsavacittassa ariyamaggasamaṅgino ariyamaggaṃ bhāvayato micchāājīvā āraṭi virati paṭivirati veramaṇī—ayaṃ, bhikkhave, sammāājīvo ariyo anāsavo lokuttaro maggaṅgo. So micchāājīvassa pahānāya vāyamati, sammāājīvassa upasampadāya; svāssa hoti sammāvāyāmo. So sato micchāājīvaṃ pajahati, sato sammāājīvaṃ upasampajja viharati; sāssa hoti sammāsati. Itiyime tayo dhammā sammāājīvaṃ anuparidhāvanti anuparivattanti, seyyathidaṃ—sammādiṭṭhi, sammāvāyāmo, sammāsati.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṇca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Sammādiṭṭhissa, bhikkhave, sammāsaṅkappo pahoti, sammāsaṅkappassa sammāvācā pahoti, sammāvācassa sammākammanto pahoti, sammākammantassa sammāājīvo pahoti, sammāājīvassa sammāvāyāmo pahoti, sammāvāyāmassa sammāsati pahoti, sammāsatisa sammāsamādhi pahoti, sammāsamādhissa sammāñāṇaṃ pahoti, sammāñāṇassa sammāvinutti pahoti. Iti kho, bhikkhave, aṭṭhaṅgasamannāgato sekkho, dasaṅga-samannāgato arahā hoti. Tatrapi sammāñāṇena aneke pāpakā akusalā dhammā vigatā bhāvanāpāripūriṃ gacchanti.

Tatra, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti. Kathaṇca, bhikkhave, sammādiṭṭhi pubbaṅgamā hoti? Sammādiṭṭhissa, bhikkhave, micchādiṭṭhi nijjīṇṇā hoti. Ye ca micchādiṭṭhipaccayā aneke pāpakā akusalā dhammā sambhavanti te cassa nijjīṇṇā honti. Sammādiṭṭhipaccayā aneke kusala dhammā bhāvanāpāripūriṃ gacchanti. Sammāsaṅkappassa, bhikkhave, micchāsaṅkappo nijjīṇṇo hoti ... pe ... sammāvācassa,

bhikkhave, micchāvācā nijjiṇṇā hoti ... sammākammantassa, bhikkhave, micchākammanto nijjiṇṇo hoti ... sammāājīvassa, bhikkhave, micchāājīvo nijjiṇṇo hoti ... sammāvāyāmassa, bhikkhave, micchāvāyāmo nijjiṇṇo hoti ... sammāsatisa, bhikkhave, micchāsati nijjiṇṇā hoti ... sammāsamādhissa, bhikkhave, micchāsamādhi nijjiṇṇo hoti ... sammāñāṇassa, bhikkhave, micchāñāṇaṃ nijjiṇṇaṃ hoti ... sammāvimuttassa, bhikkhave, micchāvimutti nijjiṇṇā hoti. Ye ca micchāvimuttipaccayā aneke pāpakā akusalā dhammā sambhavanti te cassa nijjiṇṇā honti. Sammāvimuttipaccayā ca aneke kusalā dhammā bhāvanāpāripūriṃ gacchanti.

Iti kho, bhikkhave, vīsati kusalapakkhā, vīsati akusalapakkhā—mahācattārīsako dhammapariyāyo pavattito appaṭivattiyo samaṇena vā brāhmaṇena vā devena vā mārena vā brahmunā vā kenaci vā lokasmiṃ.

Yo hi koci, bhikkhave, samaṇo vā brāhmaṇo vā imaṃ mahācattārīsakaṃ dhammapariyāyaṃ garahitabbaṃ paṭikkositaṃ maññeyya tassa diṭṭheva dhamme dasasahadhammikā vādānuvādā gārayhaṃ ṭhānaṃ āgacchanti—sammādiṭṭhiṃ bhavaṃ garahati, ye ca micchādiṭṭhiṃ samaṇabrāhmaṇā te bhoto pujjā, te bhoto pāsāṃsā; sammāsaṅkappaṃ bhavaṃ garahati, ye ca micchāsaṅkappā samaṇabrāhmaṇā te bhoto pujjā, te bhoto pāsāṃsā; sammāvācaṃ bhavaṃ garahati ... pe ... sammākammantaṃ bhavaṃ garahati ... sammāājīvaṃ bhavaṃ garahati ... sammāvāyāmaṃ bhavaṃ garahati ... sammāsatiṃ bhavaṃ garahati ... sammāsamādhiṃ bhavaṃ garahati ... sammāñāṇaṃ bhavaṃ garahati ... sammāvimuttiṃ bhavaṃ garahati, ye ca micchāvimuttiṃ samaṇabrāhmaṇā te bhoto pujjā, te bhoto pāsāṃsā. Yo koci, bhikkhave, samaṇo vā brāhmaṇo vā imaṃ mahācattārīsakaṃ dhammapariyāyaṃ garahitabbaṃ paṭikkositaṃ maññeyya tassa diṭṭheva dhamme ime dasasahadhammikā vādānuvādā gārayhaṃ ṭhānaṃ āgacchanti. Yepi te, bhikkhave, ahesuṃ okkalā vassabhaññā ahetuvādā akiriyaṇā natthikavādā tepi mahācattārīsakaṃ dhammapariyāyaṃ na garahitabbaṃ nappaṭikkositaṃ amaññiṃsu. Taṃ kissa hetu? Nindābyārosau-pārambhabhayā”ti.

Idamavoca bhagavā. Attamaṇā te bhikkhū bhagavato bhāsitaṃ abhinandunti.

Mahācattārīsakasuttaṃ niṭṭhitaṃ sattamaṃ.

Majjhima Nikāya 117

The Great Forty

Thus have I heard. On one occasion the Blessed One was living at Sāvattī in Jeta's Grove, Anāthapiṇḍika's Park. There he addressed the bhikkhus thus: “Bhikkhus.”—“Venerable sir,” they replied. The Blessed One said this:

“Bhikkhus, I shall teach you noble right concentration with its supports and its requisites. Listen and attend closely to what I shall say.”—“Yes, venerable sir,” the bhikkhus replied. The Blessed One said this:

“What, bhikkhus, is noble right concentration with its supports and its requisites, that is, right view, right intention, right speech, right action, right livelihood, right effort, and right mindfulness? Unification of mind equipped with these seven factors is called noble right concentration with its supports and its requisites.

View

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong view as wrong view and right view as right view: this is one's right view.

“And what, bhikkhus, is wrong view? ‘There is nothing given, nothing offered, nothing sacrificed; no fruit or result of good and bad actions; no this world, no other world; no mother, no father; no beings who are reborn spontaneously; no good and virtuous recluses and brahmins in the world who have realised for themselves by direct knowledge and declare this world and the other world.’ This is wrong view.

“And what, bhikkhus, is right view? Right view, I say, is twofold: there is right view that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right view that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right view that is affected by the taints, partaking of merit, ripening in the acquisitions? ‘There is what is given and what is offered and what is sacrificed; there is fruit and result of good and bad actions; there is this world and the other world; there is mother and father; there are beings who are reborn spontaneously; there are in the world good and virtuous recluses and brahmins who have realised for themselves by direct knowledge and declare this world and the other world.’ This is right view affected by taints, partaking of merit, ripening in the acquisitions.

“And what, bhikkhus, is right view that is noble, taintless, supramundane, a factor of the path? The wisdom, the faculty of wisdom, the power of wisdom, the investigation-of-states enlightenment factor, the path factor of right view in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right view that is noble, taintless, supramundane, a factor of the path.

“One makes an effort to abandon wrong view and to enter upon right view: this is one’s right effort. Mindfully one abandons wrong view, mindfully one enters upon and abides in right view: this is one’s right mindfulness. Thus these three states run and circle around right view, that is, right view, right effort, and right mindfulness.

Intention

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong intention as wrong intention and right intention as right intention: this is one’s right view.

“And what, bhikkhus, is wrong intention? The intention of sensual desire, the intention of ill will, and the intention of cruelty: this is wrong intention.

“And what, bhikkhus, is right intention? Right intention, I say, is twofold: there is right intention that is affected by taints, partaking of merit, ripening in the acquisitions, and there is right intention that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right intention that is affected by taints, partaking of merit, ripening in the acquisitions? The intention of renunciation, the intention of non-ill will, and the intention of non-cruelty: this is right intention that is affected by taints...ripening in the acquisitions.

“And what, bhikkhus, is right intention that is noble, taintless, supramundane, a factor of the path? The thinking, thought, intention, mental absorption, mental fixity, directing of mind, verbal formation in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right intention that is noble...a factor of the path.

“One makes an effort to abandon wrong intention and to enter upon right intention: this is one’s right effort. Mindfully one abandons wrong intention, mindfully one enters upon and abides in right intention: this is one’s right mindfulness. Thus these three states run and circle around right intention, that is, right view, right effort, and right mindfulness.

Speech

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong speech as wrong speech and right speech as right speech: this is one’s right view.

“And what, bhikkhus, is wrong speech? False speech, malicious speech, harsh speech, and gossip: this is wrong speech.

“And what, bhikkhus, is right speech? Right speech, I say, is twofold: there is right speech that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right speech that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right speech that is affected by taints, partaking of merit, ripening in the acquisitions? Abstinence from false speech, abstinence from malicious speech, abstinence from harsh speech, abstinence from gossip: this is right speech that is affected by taints...ripening in the acquisitions.

“And what, bhikkhus, is right speech that is noble, taintless, supramundane, a factor of the path? The desisting from the four kinds of verbal misconduct, the abstaining, refraining, abstinence from them in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right speech that is noble...a factor of the path.

“One makes an effort to abandon wrong speech and to enter upon right speech: this is one's right effort. Mindfully one abandons wrong speech, mindfully one enters upon and abides in right speech: this is one's right mindfulness. Thus these three states run and circle around right speech, that is, right view, right effort, and right mindfulness.

Action

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong action as wrong action and right action as right action: this is one's right view.

“And what, bhikkhus, is wrong action? Killing living beings, taking what is not given, and misconduct in sensual pleasures: this is wrong action.

“And what, bhikkhus, is right action? Right action, I say, is twofold: there is right action that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right action that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right action that is affected by taints, partaking of merit, ripening in the acquisitions? Abstinence from killing living beings, abstinence from taking what is not given, abstinence from misconduct in sensual pleasures: this is right action that is affected by taints...ripening in the acquisitions.

“And what, bhikkhus, is right action that is noble, taintless, supramundane, a factor of the path? The desisting from the three kinds of bodily misconduct, the abstaining, refraining, abstinence from them in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right action that is noble...a factor of the path.

“One makes an effort to abandon wrong action and to enter upon right action: this is one's right effort. Mindfully one abandons wrong action, mindfully one enters upon and dwells in right action: this is one's right mindfulness. Thus these three states run and circle around right action, that is, right view, right effort, and right mindfulness.

Livelihood

“Therein, bhikkhus, right view comes first. And how does right view come first? One understands wrong livelihood as wrong livelihood and right livelihood as right livelihood: this is one's right view.

“And what, bhikkhus, is wrong livelihood? Scheming, talking, hinting, belittling, pursuing gain with gain: this is wrong livelihood.

“And what, bhikkhus, is right livelihood? Right livelihood, I say, is twofold: there is right livelihood that is affected by taints, partaking of merit, ripening in the acquisitions; and there is right livelihood that is noble, taintless, supramundane, a factor of the path.

“And what, bhikkhus, is right livelihood that is affected by taints, partaking of merit, ripening in the acquisitions? Here, bhikkhus, a noble disciple abandons wrong livelihood and gains his living by right livelihood: this is right livelihood that is affected by taints...ripening in the acquisitions.

“And what, bhikkhus, is right livelihood that is noble, taintless, supramundane, a factor of the path? The desisting from wrong livelihood, the abstaining, refraining, abstinence from it in one whose mind is noble, whose mind is taintless, who possesses the noble path and is developing the noble path: this is right livelihood that is noble...a factor of the path.

“One makes an effort to abandon wrong livelihood and to enter upon right livelihood: this is one’s right effort. Mindfully one abandons wrong livelihood, mindfully one enters upon and dwells in right livelihood: this is one’s right mindfulness. Thus these three states run and circle around right livelihood, that is, right view, right effort, and right mindfulness.

The Great Forty

“Therein, bhikkhus, right view comes first. And how does right view come first? In one of right view, right intention comes into being; in one of right intention, right speech comes into being; in one of right speech, right action comes into being; in one of right action, right livelihood comes into being; in one of right livelihood, right effort comes into being; in one of right effort, right mindfulness comes into being; in one of right mindfulness, right concentration comes into being; in one of right concentration, right knowledge comes into being; in one of right knowledge, right deliverance comes into being. Thus, bhikkhus, the path of the disciple in higher training possesses eight factors, the arahant possesses ten factors.

“Therein, bhikkhus, right view comes first. And how does right view come first? In one of right view, wrong view is abolished, and the many evil unwholesome states that originate with wrong view as condition are also abolished, and the many wholesome states that originate with right view as condition come to fulfilment by development.

“In one of right intention, wrong intention is abolished, and the many evil unwholesome states that originate with wrong intention as condition are also abolished, and the many wholesome states that originate with right intention as condition come to fulfilment by development.

“In one of right speech, wrong speech is abolished...In one of right action, wrong action is abolished...In one of right livelihood, wrong livelihood is abolished...In one of right effort, wrong effort is abolished...In one of right mindfulness, wrong mindfulness is abolished...In one of right concentration, wrong concentration is abolished...In one of right knowledge, wrong knowledge is abolished...In one of right deliverance, wrong deliverance is abolished, and the many evil unwholesome states that originate with wrong deliverance as condition are also abolished, and the many wholesome states that originate with right deliverance as condition come to fulfilment by development.

“Thus, bhikkhus, there are twenty factors on the side of the wholesome, and twenty factors on the side of the unwholesome. This Dhamma discourse on the Great Forty has been set rolling and cannot be stopped by any recluse or brahmin or god or Māra or Brahmā or anyone in the world.

“Bhikkhus, if any recluse or brahmin thinks that this Dhamma discourse on the Great Forty should be censured and rejected, then there are ten legitimate deductions from his assertions that would provide grounds for censuring him here and now. If that worthy one censures right view, then he would honour and praise those recluses and brahmins who are of wrong view. If that worthy one censures right intention, then he would honour and praise those recluses and brahmins who are of wrong intention. If that worthy one censures right speech... right action...right livelihood...right effort...right mindfulness...right concentration...right

knowledge...right deliverance, then he would honour and praise those recluses and brahmins who are of wrong deliverance. If any recluse or brahmin thinks that this Dhamma discourse on the Great Forty should be censured and rejected, then these are ten legitimate deductions from his assertions that would provide grounds for censuring him here and now.

“Bhikkhus, even those teachers from Okkala, Vassa and Bhañña, who held the doctrine of non-causality, the doctrine of non-doing, and the doctrine of nihilism, would not think that this Dhamma discourse on the Great Forty should be censured and rejected. Why is that? For fear of blame, attack, and confutation.”

That is what the Blessed One said. The bhikkhus were satisfied and delighted in the Blessed One's words.

17.6 **Sutta Learning Sequence for the Present Day**

November 30, 2016; revised October 29, 2019

Introduction

1. In this critical post, I point out that it is better to study *suttā* in the order that is the reverse of the time sequence of *sutta* delivery by the Buddha.

- As I discussed in the post, “[Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude](#),” the Buddha spent the first few years of his ministry “paying back” those those who had helped him attain the *Buddhahood* through numerous previous lives.
- Those ranged from the five ascetics (to whom the Buddha delivered the first *desanā*) to King Suddhodana (his father, he went to see in the fifth year after attaining the Buddhahood). They and others in between had fulfilled most of the requirements to achieve the *Arahanthood* in previous lives. They were “ready” to attain the *Arahantship* and were able to comprehend the *Tilakkhaṇa* (*anicca*, *dukkha*, *anatta*) reasonably quickly.

Comprehending *Tilakkhaṇa* Is Not Easy

2. Grasping the *Tilakkhaṇa* is not easy for a normal human being. It takes many, many lives. In a given *Buddha Sāsana* (ministry), those who have fulfilled most of the requirements in previous lives attain *Arahanthood* first, without much effort. For example, the two chief disciples, Ven. Sariputta and Ven. Moggallāna reached the *Sotāpanna* stage just by listening to a single verse and then attained the *Arahanthood* within two weeks.

- **Therefore, those discourses delivered in the first several years were “deep.” They could only be comprehended by those who had made progress on the path in previous lives.**
- The first *desanā*, *Dhammacappavattana Sutta*, was a summary of the “Buddhist doctrine” to put in terms of modern terminology. The second *desanā* was on the *anatta* nature of the world, *Anatta Lakkhana Sutta*. The “fire sermon” (*Adittapariyaya Sutta*) was on the “burning nature” of this world of 31 realms. The word “burning” implies to “*tāpa*” or “heat in the mind.” This word “*tāpa*” was discussed later in the *Mahā Satipatthāna Sutta*; see, “[Satipatthāna Sutta – Relevance to Suffering in This Life](#).”
- A large number of people (who were ready) attained *magga phala* within the first few years of the *Buddha Sāsana*. In the latter years it took longer and longer for people to attain *magga phala*. In the latter years, the Buddha delivered more and more discourses that were “less deep” and easier to grasp for those who were “less prepared”.
- For example, [Mahā Cattarisika Sutta](#) and [Mahā Satipatthāna Sutta](#) (which were delivered later) provide detailed accounts of the process, starting with basic concepts. However, those basic concepts have not discussed adequately. In some cases, translations are incorrect.
- Many *suttā* clarify even more fundamental aspects.

3. All those “deep *desanās*” delivered early by the Buddha require detailed explanations. Just word-by-word translations cannot explain the deeper meanings. That is why the meanings of the *Tilakkhaṇa* remain hidden.

- **Furthermore, understanding *Tilakkhaṇa* requires some fundamental — and essential — material covered in later *suttā* by the Buddha.**
- I plan to discuss more of the “less deep” *suttā* in this section in the future. I realized this point only recently while writing posts in the new “[Living Dhamma](#)” section.

Four Categories of People, Based on Their Capabilities

4. As pointed out by Buddha, there are three types of people who can comprehend *Tilakkhaṇa*, categorized according to their “inherent capabilities”. That has nothing to do with “book knowledge”, but has everything to do with one’s ingrained capabilities accumulated over many, many lives.

- The first category is *ugghaṭitaññu* or “persons with high wisdom”; they could grasp concepts very easily. Then some belong to the *vipaṇcitaññu* category, and they needed a bit more explanation to understand the concepts. The third category is *neyya*; they need detailed explanations (i.e., *patiniddesa*) to grasp a concept. People in the last group of “*padaparama*” are unable to comprehend Dhamma.

[*ugghaṭitaññu* : “one who already during a given explanation comes to penetrate the truth” (Pug.). This is one of four types of persons classified according to their ability of acquiring insight, mentioned in A. IV, 133. Cf. also *vipaṇcitaññu*, *neyya*, *pada-parama*. See [The Requisites of Enlightenment, by Ledi Sayadaw \(WHEEL 171/174\)](#). *vipaṇcitaññu* : “one who realizes the truth after explanation.” Thus is called one who realizes the truth only after detailed explanation of that which already had been said to him in a concise form. Cf. *ugghaṭitaññu*. *neyya* : “requiring guidance,” is said of a person “who through advice and questioning, through wise consideration, and through frequenting noble-minded friends, having intercourse with them, associating with them, gradually comes to penetrate the truth” (Pug. 162). Cf. *ugghaṭitaññu*. *pada-parama* : “one for whom the words are the utmost attainment.” “Whoever, though having learned much, speaking much, knowing many things by heart, and discoursing much, has not penetrated the truth, such a man is called by that name” (Pug. 163).]

- These categories are listed in the [WebLink: suttacentral: Ugghaṭitaññū Sutta \(AN 4.133\)](#) and discussed in, “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).”
- These days — 2600 years into the *Buddha Sāsana* of the Gotama Buddha — most people are in the third category of *neyya*. Therefore, it makes more sense for most people today to start at a more fundamental level and proceed to higher levels.
- Trying to comprehend those “deep” *suttā* — without first grasping the material in the *suttā* that were delivered later in his life by the Buddha — is like trying to pass the university entrance examination without having a good primary and high school education.

“Living Dhamma” Section

5. The “[Living Dhamma](#)” section was started to provide a systematic way to proceed to higher levels starting at a fundamental level. I highly recommend to everyone to start there.

- If one is confident of the material in early posts in that section, they can proceed quickly to higher levels (later posts). Furthermore, if someone runs into difficulty at a recent post, one needs to go back to earlier posts and clarify those points.
- The Buddha had a unique ability to “see” the capability of each person. Therefore, he was able to deliver a discourse tailored to each individual. [No one today has that capability, despite false claims by some.](#) Thus, each person needs to realize one’s abilities and deficiencies and strive accordingly.

Need to Discuss Simper *Suttā* in the *Tipiṭaka*

6. There are hundreds of *suttā* in the *Tipiṭaka* that discuss key concepts at a basic level. It is quite unfortunate that even the *Theravadins* have set aside the *Tipiṭaka* and are using the *Visuddhimagga* of the Buddhaghosa as the “base.”

- With the current revival of pure Dhamma in Sri Lanka — initiated by Venerable Waharaka Abhayaratnanalankara Thero — the value of the *Tipiṭaka* is becoming clear.

7. In the “[Sutta Interpretations](#)” section, I plan to discuss some of those long-forgotten *suttā* to explain key Pāli terms. I will briefly mention some of those *suttā* below.

- The *Nibbāna Sutta* in the *Saṃyutta Nikāya* clearly describes *Nibbāna* as, “..ragakkhayo, dosakkhayo, mohakkhayo, idam vuccathi Nibbananti.”

- One does not need to examine deep concepts like *sunyata* initially. However, even though those deeper meanings become clear upon grasping the basic ideas. See, “[What is Sunyata or Sunnata \(Emptiness\)?](#)”
- That is why I emphasized this at the beginning of the Meditation section: “[1. Introduction to Buddhist Meditation.](#)” One can actually experience the “cooling down” as one gets rid of greed, hate, and ignorance (of the true nature of the world) from one’s mind.

More Key Pāli Words

8. Another keyword is *anicca*, incorrectly translated as “impermanence”. It is very easy to see from the [WebLink: suttacentral: Icca Sutta \(SN 1.96\)](#) (in the *Saṃyutta Nikāya*), that *icchā* or the opposite of *anicca* has nothing do with “permanence”. The *Sutta* states,

“..*Ichhāya bajjhati loko, icchā vinayāya muccati*

Ichhāya vippahānena, sabbam chindati bandhanan” ti.”

- That means the following, “The world is bound by *icchā* (cravings), and one needs to get rid of *icchā* to become disentangled; one becomes free of all entanglements by realizing *anicca* nature.” Of course, one removes cravings by comprehending *anicca* nature, i.e., that it is not possible to maintain things to one’s liking.
- *Ichhā* (pronounced ichchā) is a perception in one’s mind.

9. The *Dasakammapatha Sutta*, clearly states how people with similar *gati* tend to associate with each other and thus make those *gati* stronger.

- That is why one needs to dissociated from those who have bad *gati* and try to make associations with people with “good *gati*”; see, “[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavas\)](#)” and, at a deeper level in “[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\).](#)”

10. In the *Ginjakavasatha sutta* (*Saṃyutta Nikāya*), Buddha tells Ven. Ānanda that one can determine for oneself whether one has attained the *Sotāpanna* stage. Furthermore, one can declare that if one so desires.

- The deeper meaning of the five precepts discussed in the *Sikkapada vibhanaga* in the *Vibhangapakaranaya*-2. The deeper meaning of the fifth precept, “*surameraya majjapama dattana veramani...*” is described as discussed in the post, “[The Five Precepts – What the Buddha Meant by Them.](#)”

Many Key Words Are Based on “*San*”

11. The *Cūlahatthipadopama Sutta* (in the *Majjima Nikāya*) explains many words associated with “*san*”. Some of these “*san*” words are discussed in the section on “[San.](#)” More words in the post, “[What is “San”? Meaning of Sansāra \(or Saṃsāra\).](#)”

- Ven. Mahinda Thero explained that *sutta* to King Denampiyathissa when they first met.
- *Cūla* is for “small”. *Hatthi* is an elephant. *Padopama* comes from “*pada*” + “*upamā*,” or “from an example or simile”. The simile is about a person who came to the wrong conclusion about the size of an elephant, based on the size of the footprint on the ground left by that elephant.
- That *sutta* explains how people come to wrong conclusions about a given keyword by just taking in the “conventional” interpretation (for example, taking *anicca* to mean “impermanence,” whereas the actual meaning of *anicca* much more in-depth).
- I hope to discuss those and other “long-forgotten” and misinterpreted *suttā* that help us understand basic concepts first. Then it would be easier to tackle those deeper *suttā* that were delivered very early.

17.7 Dhammacakkappavattana Sutta

17.7.1 Dhammacakkappavattana Sutta – Introduction

January 16, 2016; revised February 20, 2020

Introduction

Please download and print the pdf of the *sutta* (or open in another window) for reference. You may need to click the link on the new page again:

[Dhammacakkappavattana Sutta Text](#)

1. I have divided the *sutta* to 13 sections, and I will go through some parts in this essay. There are more posts on other section of the *sutta*. As explained in the “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#)” post, a *sutta* gives only a short summary of the original *desanā*. It needs detailed explanations.

- It may be helpful to listen to the chanting of the *sutta* by the venerable *Thero*, as it gives the correct pronunciations, and also how to chant it without “too much dragging” as done commonly (which will diminish its effects).
- I could not get my normal audio player to work, so the new player below just has a play button. There is no volume control, so you need to adjust volume on your end.

[WebLink: Listen to the Dhammacakkappavattana Sutta](#)

2. *Sutta* chanting can be much more effective if one recites it the right way AND also understand the meaning at least to some extent.

- It is possible that even a single *sutta* can provide Dhamma knowledge that one needs to attain *magga phala*. However, it must be analyzed correctly in detail (*paṭiniddesa* version); see, “[Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#).” Dhammacakkappavattana Sutta is especially important since it lays out the “blueprint” of Buddha Dhamma.

The Framework of Buddha Dhamma

3. Of course, this was the first *sutta* delivered by the Buddha, to the five ascetics Koṇḍañña, Bhaddiya, Vappa, Mahānāma, and Assaji. Thus, it has the framework or the foundation of Buddha Dhamma.

- The name of the *sutta* comes from the combination of three terms: *Dhamma*, *Cakka*, and *Pavattana*. *Dhamma* here means the Buddha Dhamma or the true nature of existence. *Cakka* means “seeing” or “to see”. *Pavattana* means to “set in motion” AND to “maintain”.
- Therefore, the *sutta* describes the **way to “see” the true nature of existence with wisdom**, not with the physical eye. Only a Buddha can discover the true nature, but an average human can comprehend it, once explained.

- As in many Pāli terms, the word “*dhammacakkappavattana*” comes from the combination of three above words, with an additional “p” just before *pavattana*. As we discussed before, *pañcakkhandha* is the combination of *pañca* with *khandha* with an additional “k” in tying up the two words.
- Sometimes the *sutta* is also called the *Dhamma Cakka Pavattana Sutta*.

Opening the “Dhamma Eye” to the World

4. Let us address a common mistranslation of the name of the *sutta*. The most common is “Setting the Wheel of Dhamma in Motion”. Here *cakka* (pronounced “chakka”), is translated as “wheel”. But the name of the *sutta* becomes quite apparent when one looks at section 9.

- In section 9 (see the [text](#)), *dhammacakkhun udapādi* means “eye to see the Dhamma was born” for the ascetic Kondanna (*āyasmato Koṇḍañña*). There is no way to associate a “wheel” here.
- Note that the main summary of the *sutta* ends with section 8. The following sections provide the following information. One is that the ascetic Koṇḍañña attained the *Sotāpanna* stage. The second is a description of various types of *devā* and *brahmā* who attended the delivery of the *sutta*; see #6 below. A large number of them attained various stages of *Nibbāna*.

Four Stages of *Nibbāna*

5. This *sutta* lays out the basic structure of Buddha Dhamma. Then it explains how one attains release from this world of 31 realms via successively attaining four stages of *Nibbāna*. That happens by getting through “three rounds” of bondages (*tiparivaṭṭa*) to this world: “*tī*” means “three”, “*vatta*” means “*vataya*” in Sinhala or “circle” in English.

- In section 8, it says, “..imesu catūsu ariyasaccesu evaṃ *tiparivaṭṭam dvādasākāram yathābhutam ñāṇadassanam...*” Here “*catusu*” means “four” and “*ariyasaccesu*” of course, means the “Noble Truths.” By comprehending the Four Noble Truths, one can overcome the three rounds of bondage and fulfill the 12 factors (“*dvādasākāram*.”) Those 12 factors will be discussed in “[Tiparivattaya and Twelve Types of Ñāṇa \(Knowledge\)](#).”

Three “Rounds” or “circular Walls” to Overcome

6. “*Tiparivaṭṭa*” means the three rounds of bondage. The first is to be released from the *apāyā* (four lowest realms), via the *Sotāpanna* stage, by removing the wrong views about existence in the 31 realms.

- In the second round, one overcomes the *kāma loka* (realms 5 through 11, which include the human realm and 6 *Deva* realms). That happens via two stages. A *Sakadāgāmī* will not be reborn with bodies subjected to diseases. Thus, there will be no more rebirths for a *Sakadāgāmī* in the five lowest realms (*apāyā* and the human realms). Then, at the *Anāgāmī* stage, *kāma rāga* and *paṭigha* go away and one is released from births anywhere in the *kāma loka*.
- In the third round, any linkage to anywhere in the 31 realms is removed. The mind becomes free of attachment to any trace of matter, and the *Arahant* stage is attained. See, “[What Are Rūpa? \(Relation to Nibbāna\)](#).”

The 31 Realms of Existence

6. Section 11 is long and takes a significant part of the *sutta*. That section names the 6 *deva* realms and 15 out of 16 *rupi Brahma* realms. Most of this section has been truncated in many published versions of the *sutta*. However, this section is important for a couple of reasons.

- First, it clearly shows that the Buddha indeed described a “wider world” than experienced by us, consisting of 31 realms; see, “[The Grand Unified Theory of Dhamma](#)” and “[31 Realms of Existence](#).”

- Second, it says that beings from many those realms were present when the Buddha delivered the *desanā* overnight (over many hours) to the five ascetics. Starting from the 6 *deva* realms, it lists 15 *rupi brahma* realms (except the *asañña* realms, where beings have only a physical body and thus cannot even listen to a *desanā*). It is said that numerous *Devā* and *Brahmā* attained various stages of *Nibbāna*.
- Section 11 starts with “*Bhummānaṃ devānaṃ saddaṃ sutvā Cātummahārājikā devā sadda manussāvesuṃ...*” Here “*bhummānaṃ devānaṃ*” means “*bhummatta Deva*.” They are part of the *Cātummahārājika Deva* realm, but are located at the Earth’s surface with humans (even though we cannot see them). They first became aware of the *desanā* and notified their higher-lying main realm. Section 11 lists how the news progressively propagated to higher-lying realms and eventually *Devā* from all those 21 realms came to listen to the *desanā*. ”
- As you can see those realms match the names listed in the following post on the web (note that all of them are referred to as *devas* in the *sutta*, regardless of whether they belong to the 6 *Deva* realms or the *rūpi Brahma* realms): “[31 Realms of Existence](#).”
- Of course, only 5 humans (the five ascetics) were present. Any being in the lowest four realms cannot comprehend Dhamma. Also, the *Brahmā* in the 4 *arūpi* realms do not have ears to listen to. Thus section 11 lists 21 realms. Not listed are the four lowest realms, the *asañña* realm, and the four *arūpi Brahma* realms. They appear in many other *suttā*.

The Sutta Provides Only a Summary

7. As I mentioned above, the *sutta* gives only a brief outline of the *desanā*. It was delivered over many hours, and the *sutta* is just an outline of that delivery.

- The *sutta* starts off with the customary “*Evam me sutam*” (thus I heard) uttered by Ven. Ānanda at the *Dhamma Sangayana* where these *suttā* were categorized into sections in the *Tipiṭaka*.
- Section 1 is about the two extremes to be avoided: **kāmasukhallikānuyogo** (excess sense pleasures) and **attakilamathānuyogo** (engage in useless activities that make one go through hardships).
- Note that both extremes are labeled “*anattasanhito*.” This means anyone who follows those two extremes are unaware of the “*anatta*” nature. Thus they have *saññā*, or perceptions, that will LEAD TO “*anatta*” or being helpless in the rebirth process.
- And they both are “*dukkho*” and “*anariyo*”: they will be subjected to suffering and thus they are not *Ariyā* or Noble Ones.
- In addition, the extreme of **kāmasukhallikānuyogo** is also labeled *hīno*, *gammo*, *pothujjaniko*. Here, “*hīno*” means lowly; *gammo* means “uneducated” or “crass”. “*Pothu*” means bark or the outer shell of a tree trunk (which is of no value,) and “*janika*” means to produce. Thus a “*pothujjaniko*” means a person who is engaged in useless and unproductive activities. The Buddha often used the term *pothujjaniko* (or *pothujjano*) to described a person who value and crave sense pleasures.

The Middle Path

8. Most people are in the **kāmasukhallikānuyogo** mode, even if not in extreme. In fact, one gets closer to “middle” as one progressively become a *Sotāpanna anugāmi*, *Sotāpanna*, *Sakadāgāmi*, *Anāgāmi*. Then the “true middle” found only at *Arahanthood*.

- Thus ***majjhima paṭipadā*** has a deeper meaning than just “middle path”. One has to realize the dangers of “getting drunk” (“*majji*” or intoxicated with sense pleasures). Here, “*mā*” there means “getting release from”, just like in “*sammā*” means “*saṇ*” + “*mā*”; see, “[What is ‘Saṇ?’ Meaning of Saṇsāra \(or Samsāra\)](#).”
- This is why the **kāmasukhallikānuyogo** mode has the additional “labels” of *hīno*, *gammo*, *pothujjaniko*. Anyone “intoxicated” with sensory pleasures is a *hīno*, *gammo*, *pothujjaniko*. That mindset can be changed only by comprehending the “..Dhamma that has never been known to the

world..” or “..*pubbe ananussutesu dhammesu...*” That phrase is repeated many times in sections 4 through 7 for a reason.

- This is the reason why one cannot comprehend this Dhamma in a conventional way. One has to realize the true nature of the world: *anicca, dukkha, anatta*; see, “[Buddha Dhamma – In a Chart](#).”

More posts on the *sutta* at, “[Dhammacakkappavattana Sutta](#).”

17.7.1. Dhammacakkappavattana Sutta Text

1

Evam me sutam:

Ekaṃ samayaṃ Bhagavā **Bārāṇasīyaṃ viharati Isipatane Migadāye**. Tatra kho Bhagavā **pancavaggiye bhikkhū** āmantesi—

1. Dve me’, bhikkhave, antā pabbajitena **na sevitabbā** :

Katame dve:

i. Yo cāyaṃ kāmesu **kāmasukhallikānuyogo** —hīno, gammo, pothujjaniko, anariyo.

anattasanhito

ii. Yo cāyaṃ **attakilamathānuyogo** —dukkho, anariyo **anattasanhito** ,

ete te, bhikkhave, ubho ante anupagamma **majjhimā paṭipadā** Tathāgatena abhisambuddhā cakkhukaraṇī, ñāṇakaraṇī, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭṭati.

2. Katama ca sā, bhikkhave, **majjhimā paṭipadā** Tathāgatena

abhisambuddhā—cakkhukaraṇī ñāṇakaraṇī, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭṭati?

Ayam’eva **ariyo aṭṭhaṅgiko maggo** —seyyathidan:— Sammā diṭṭhi, sammā saṅkappo, sammā vācā, sammā kammanto, sammā ājīvo, sammā vāyāmo, sammā satī, sammā samādhi.

Ayan kho sā, bhikkhave, **majjhimā paṭipadā** Tathāgatena

abhisambuddhā—cakkhukaraṇī, ñāṇakaraṇī, upasamāya, abhiññāya, sambodhāya, nibbānāya sanvaṭṭati.

3. Idan kho pana, bhikkhave, dukkhan ariya saccan: — Jāti’pi dukkhā, jarā’pi dukkhā, vyādhi’pi dukkho, maraṇam’pi dukkhan, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yamp’icchan na labhati tam’pi dukkhan, saṅkhittena pañcupadānakkhandhā dukkhā.

Idan kho pana, bhikkhave, **dukkhasamudayan ariya saccan:** Yāyan taṇhā ponobhavikā nandirāgasahagatā tatratatrābhinandinī—seyyathidan:— kāmatanḥhā, bhavatanḥhā, vibhavanḥhā.

Idan kho pana, bhikkhave, **dukkhanirodhan ariya saccan**: Yo tassā yeva taṇhāya asesavirāgaṇirodho, chāgo, paṭinissaggo, mutti, anālayo.

Idan kho pana, bhikkhave, **dukkhanirodhagāminī paṭipadā ariya saccan**: — Ayameva ariyo aṭṭhaṅgiko maggo—seyyathidan:—sammā dīṭṭhi, sammā saṅkappo, sammā vācā, sammā kammanto, sammā ājīvo, sammā vāyāmo, sammā sati, sammā samādhi.

4. (i) **Idan dukkhan ariyasaccan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(ii) Tan kho pan'idan dukkhan ariyasaccan **pariññeyyan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā, udapādi, vijjā udapādi, āloko udapādi.

(iii) Tan kho pan'idam dukkhan ariyasaccan **pariññātan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

5. (i) **Idan dukkhasamudayan ariyasaccan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(ii) Tan kho pan'idan dukkhasamudayan ariya saccan **pahātabban'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(iii) Tan kho pan'idam dukkhasamudayan ariyasaccan **pahīnan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

6. (i) **Idam dukkhanirodhan ariyasaccan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(ii) Tan kho pan'idan dukkhanirodhan ariyasaccan **sacchikātabban'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(iii) Tan kho pan'idan dukkhanirodhan ariyasaccan **sacchikatan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

7. (i) **Idam dukkha nirodhagāminī paṭipadā ariyasaccan'ti me**, bhikkhave, pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.

(ii) Tan kho pan'idan dukkha nirodhagāminī paṭipāda ariya saccan **bhāvetabban'ti me**, bhikkhave, **pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.**

(iii) Tan kho pan'idan, dukkha nirodhagāminī paṭipadā ariyasaccam **bhāvitān'ti me**, bhikkhave, **pubbe ananussutesu dhammesu cakkhun udapādi, ñāṇan udapādi, paññā udapādi, vijjā udapādi, āloko udapādi.**

8. Yāvakīvañca

me, bhikkhave, imesu chatūsu ariyasaccesu **evaṃ tiparivaṭṭan dvādasākāran yathābhūtan ñāṇadassanan na suvisuddham ahosi, neva tāv'āhan, bhikkhave**, sadevake loke samārake sabrahmake sassamaṇabrāhmaṇiyā pajāya sadevamanussāya anuttaran sammā sambodhin abhisambuddho paccaññāsin.

Yato ca kho me, bhikkhave, imesu chatūsu ariyasaccesu **evaṃ tiparivaṭṭan dvādasākāran yathābhūtan ñāṇadassanan suvisuddham ahosi, ath'āham, bhikkhave**, sadevake loke samārake sabrahmaniya pajāya sadevamanussāya anuttaran sammā sambodhin abhisambuddho paccaññāsin.

Nāṇaṇ ca pana me dassanan udapādi, akuppā me chetovimutti a yaṇantimā jāti, natthi' dāni punabbhavo'ti.

Ida ma vo ca Bhagavā. Attamanā pañcavaggiyā bhikkhū Bhagavato bhāsitarā abhinandun'ti.

9. Imasmiñca pana veyyākaraṇasmin bhaññamāne āyasmato Koṇḍaññaassa virajan vītamalan **dhammacakkhun udapādi** —yan kiñci samudayadhamman sabban tan nirodhadhamman'ti.

10. Pavattite ca pana Bhagavatā dhammacakke bhumā devā sadda manussāvesun: **Etaṃ Bhagavatā Bārāṇasiyan Isipatane Migadāye anuttaran dhammacakkan pavattitan** appativattiyan samaṇena vā brāhmaṇena vā devena vā mārena vā brahmunā vā kenaci vā lokasmin'ti.

End of Dhammacakkappavattana Sutta

17.7.2 Essence of Buddhism – In the First Sutta

October 23, 2018; revised May 4, 2020; November 14, 2020; March 11, 2021; May 27, 2021; April 12, 2022; major revision July 28, 2022; rewritten with chart March 3, 2023

The essence of Buddhism (Buddha Dhamma) is in the first *sutta* delivered by the Buddha, *Dhammacakkappavattana Sutta*. We discuss the verse “*saṅkhittena pañcupādānakkhandhā dukkhā*” in detail.

Suffering That Can Be Eliminated

Ref. 1: *Dhammacakkappavattana Sutta* (SN 56.11)Ref. 2: Examples: *Pātāla Sutta* (SN 36.4); *Bhāra Sutta* (SN 22.22)

Buddhism – In Charts 4. Dukkha – Future Suffering (with clickable links only in PDF and WebHelp)

Download/Print: ["WebLink: PDF Download: 4. Dukkha – Future Suffering"](#)

1. This *sutta* states the Four Noble Truths in summary form. It takes a determined effort to understand them. This post will focus on the verse stating the First Noble Truth.

- In particular, we highlight that this verse is about "suffering" that can be stopped from arising.
- The Pāli word for "suffering" is "*dukha*" (with one k.) The word *dukkha* (with two k's) means "suffering that can be eliminated" (*dukha* + *khaya*.)
- Not many *suttās* use the word "*dukha*" because the ability to escape that suffering is always emphasized with "*dukkha*." In the "[WebLink: suttacentral: Pātāla Sutta \(SN 36.4\)](#)," *dukha* is used to describe the painful feelings present in the *apāyās* (*pātāla* or the "abyss.") More examples in "[Does the First Noble Truth Describe only Suffering?](#)"

First Noble Truth in Just a Single Verse!

2. Let us examine how the Buddha summarized the First Noble Truth about suffering in the "[WebLink: suttacentral: Dhammacakkappavattana Sutta \(SN 56.11\)](#)."

"*Idam kho pana, bhikkhave, dukkham ariya saccam:*

jātipi dukkhā, jarāpi dukkhā, byādhīpi dukkho, maraṇampi dukkhāṃ, appiyehi sampayogo dukkho, piyehi vippayogo dukkho, yampicchaṃ na labhati tampi dukkhāṃ—saṅkhittena pañcupādānakkhandhā dukkhā.”

Translated: *Bhikkhus*, What is the Noble Truth of Suffering?

“**Birth is suffering, getting old is suffering, getting sick is suffering, dying is suffering.** Having to associate with things one dislikes is suffering and separation from those one likes. **If one does not get what one likes/craves/desires, that is suffering** – in brief, the origin of suffering is the craving for the five aggregates of *rūpa, vedanā, saññā, saṅkhāra, viññāṇa* (*pañcupādānakkhandha*). *Pañcupādānakkhandha* (*upādāna* or **craving/desire** for *pañcakkhandha*) represents all we crave in this world.”

- The fact that *pañcakkhandha* represents one's world is discussed in “[The Five Aggregates \(Pañcakkhandha\)](#).” But read this post first.
- (Here, I have translated *upādāna* as **craving**. However, the word *upādāna* cannot be represented by just one word. It is a good idea to grasp the meaning. See “[Concepts of Upādāna and Upādānakkhandha](#).”)
- There are four sections in that verse. I have highlighted alternating parts to explain each of the four below.

The Key Aspects of Suffering

3. The first part in bold indicates what we consider forms of suffering: Birth, getting old, getting sick, and dying.

- **Every birth ends up in death. That is why rebirth is suffering. All births — without exception — end up in death.**
- We also DO NOT LIKE to get old, get sick, and do not like to die. If we experience any of those, that is suffering.
- We WOULD LIKE it to stay young, not get old, not get sick, and not die ever. If we can have those conditions fulfilled, we will be forever happy.
- Therefore, it is clear that the Buddha focused on the suffering associated with the rebirth process in his first discourse.

Root Cause of Suffering – Not Getting What One Desires

4. Anyone can see that not getting what one desires/craves is suffering.

- The second part of the verse in #2 (in black) says: **Having to associate with things that one does not like is suffering, and having to separate from those one wants is suffering.** That must be evident to all.
- That is stated in one concise statement in the third part of the verse in #2 (in red): “*yampicchaṃ na labhati tampi dukkhāṃ.*”

Yampicchaṃ na labhati tampi dukkhāṃ

5. “*Yampicchaṃ na labhati tampi dukkhāṃ*” is a shortened version of the verse (that rhymes). The complete sentence is “*Yam pi icchaṃ na labhati tam pi dukkhāṃ.*”

- “*Yam pi icchaṃ*” means “whatever is **liked or craved** for.” “*Na labhati*” means “not getting.” “*tam pi dukkhāṃ*” means “that leads to suffering.”
- Therefore, that verse says: “**If one does not get what one likes/craves/desires, that leads to suffering.**”

- That is a more general statement and applies to any situation. We can see that in our daily lives. We wish to hang out with people we like, and being with people we do not like is stressful.
- **Furthermore, the more one craves something, the more suffering one will endure.** But this requires a lot of discussion.
- Note that “*iccha*” (and “*icca*”) is pronounced “ichcha.” See “[“Tipitaka English” Convention Adopted by Early European Scholars – Part 1](#)” and Part 2 there.

6. Thus, the “*Yampiccam nalabhati tam pi dukkham*” (“*Yam pi **icchaṃ** na labhati tam pi dukkham*”) verse gets us closer to the deeper meaning of the First Noble Truth on suffering.

- **Note that *icca* and *iccha* (ඉච්ච and ඉච්ඡ in Sinhala) are used interchangeably in the *Tipiṭaka*.** The word “*iccha*” with the emphasis on the last syllable (with “h”) indicates “strong *icca*” or “strong attachment.”
- The word “*icca*” (liking) is closely related to “*taṇhā*” (getting attached). *Taṇhā* happens automatically because of *icca*.
- Not getting what one desires or craves is the opposite of “*icca*” or “*na icca*” or “*anicca*.” That is the same way that “*na āgami*” becomes “*Anāgāmi*” (“*na āgami*” means “not coming back”; but in the context of *Anāgāmi*, it means “not coming back to *kāma loka* or the lowest 11 realms. **Both these are examples of Pāli *sandhi* rules (connecting two words).**

Connection to the *Anicca* Nature

7. Therefore, even though we like/desire (*icca/iccha*) some things in this world, those expectations are not met in the long run. In particular, we have to give up everything at least at death.

- **That is why the intrinsic nature of this world is “*anicca*.”** When we don’t get what we desire, we suffer. That suffering is UNAVOIDABLE in two situations: (i) at death, we will have to leave all we crave, (ii) even though we don’t like to be reborn in “suffering-filled realms,” that is where most rebirths take place. That is why the world is of an “*anicca* nature” and leads to *dukkha*.
- However, we wrongly believe that the world is of a “*nicca* nature,” i.e., our desires/expectations can be attained AND maintained. Thus, another (and related) way to explain *anicca* as the opposite of “*nicca*”; see “[Three Marks of Existence – English Discourses](#).”

“*Saṅkhittena Pañcupādānakkhandhā Dukkā*”

8. The last part of the verse in #2, “*saṅkhittena pañcupādānakkhandhā dukkhā*,” will take much more explaining. One first needs to understand *pañcakkhandhā* (the five aggregates of *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāna*) even to begin to understand this part.

- Here, *pañcakkhandhā* is entirely mental **and defines one’s world**.
- *Pañcupādānakkhandhā* (*pañca upādāna khandhā*) includes **all that we crave in the world!** We accumulate bad *kamma* (via *abhisāṅkhāra*) to fulfill our cravings and **do not realize** that it is why we are trapped in this suffering-filled rebirth process!
- Most people have no idea what *pañcakkhandhā* and *pañcupādānakkhandhā* mean.
- These concepts are discussed in detail in “[The Five Aggregates \(Pañcakkhandha\)](#).” We will discuss this in detail again in this series: “[Buddhism – In Charts](#).”

9. Each person’s world is what one experiences, i.e., the five aggregates/*pañcakkhandhā* of *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāna*.

- Some of our experiences (i.e., *pañcakkhandhā*) are mind-pleasing, and we **attach** to them; that fraction is *pañcupādānakkhandhā*. Such attachments lead to the *abhisāṅkhāra* generation leading to rebirth and more suffering. Thus, future suffering cannot be stopped until we understand the details of this

process (*Paṭicca samuppāda*). That understanding (the Buddha himself reached upon Buddhahood) leads to the end of the rebirth process and the end of future suffering.

- After explaining the four Noble Truths (we briefly discussed just the First Noble Truth), the Buddha says in the middle of the *sutta*: “*Ñāṇaṇca pana me dassanaṃ udapādi: ‘akuppā me vimutti, ayamantimā jāti, natthi dāni punabbhavo’*” ti.”

Translated: “The knowledge and vision arose in me: ‘unshakable is the liberation of my mind. **This is my last birth.** There is no more renewed existence.’”

Misconceptions on *Dukkha Sacca*, *Pañcakkhandhā*, and *Pañcupādānakkhandhā*

10. Many think that *Dukkha Sacca* (the First Noble Truth, pronounced “*dukkha sachcha*”) says everything is suffering. That is not true; there are a lot of “pleasures” to enjoy in this world.

- The first three parts of the verse in #2 that summarizes the First Noble Truth explain that there is “hidden suffering” in the world that an average person would not see. Even though people celebrate birthdays, we get closer to death with each birthday passing. Even though we desire to be with those we love forever, separation from them is inevitable, at least at death.
- The last part of the verse is the critical part of the First Noble Truth. It is not a type of suffering but the root cause of (future) suffering. We become subjected to suffering because we attach to certain *rūpa* in this world and also to *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* that arise from interactions with such *rūpa*. That is *pañcupādānakkhandhā* (*pañca upādāna khandhā*), loosely meaning “attachment to the *pañcakkhandhā*.”
- Also, see “[Does the First Noble Truth Describe only Suffering?](#)” and “[First Noble Truth is Suffering? Myths about Suffering.](#)”

We Don’t See the “Hidden Suffering” in Sensory Pleasures

11. That is until a Buddha explains it! The Buddha gave the following analogy to describe the “hidden suffering” humans don’t see.

- When a fish bites bait, it does not see the suffering hidden in that action. Looking from the ground, we can see the whole picture and know what will happen to the fish if it bites the bait. But the fish cannot see that whole picture and thus does not see the hidden suffering (the hook hidden in the bait.) It can only see the bait (a delicious bit of food.)
- In the same way, if we do not know about the wider world of 31 realms (with the suffering-laden four lowest realms) and that we have gone through unimaginable suffering in those realms in the past, we only focus on what is easily accessible to our six senses.
- That analogy is in the “[WebLink: suttacentral: Balisa Sutta \(SN 17.2\).](#)”
- Further details in “[Is Suffering the Same as the First Noble Truth on Suffering?](#)” and “[Does the First Noble Truth Describe only Suffering?](#)”
- The mindless translation of “*dukkha*” as “suffering.” everywhere (without understanding that the primary reference is to the “suffering in the rebirth process”) has led to confusion, such as whether an *Arahant* is free of “all suffering” even while living. Another confusion is what is meant by “*Nibbāna*.” It simply means “the end of the rebirth process.” All suffering ends with the death of *Arahant*.

A Sutta Is a Highly Condensed Summary

12. Some people think the Buddha recited each *sutta* as it appears in the *Tipiṭaka*. That could be why *suttā* are translated word-by-word by most translators today. But that is far from the truth.

- As we saw above, *Dhammacakkappavattana sutta* is highly condensed (as many *suttā* are). Even a single verse takes a lot of explaining. Further analysis of the *sutta* in this subsection: [“Dhammacakkappavattana Sutta.”](#)
- The Buddha delivered *Dhammacakkappavattana Sutta* to the five ascetics over several days. See [“The Life of the Buddha” by Bhikkhu Nānamoli.](#) A direct account from the *Tipiṭaka* at [“WebLink: The Long Chapter \(Mahākhandhaka\) \(Vinaya Kd 1\).”](#) see “Section 6. The account of the group of five.”
- Only Ven. Kondañña attained the *Sotāpanna* stage on the first night. **Then the Buddha explained the material over several days.** The other four ascetics reached the *Sotāpanna* stage over several days.
- The above book contains many passages from the *Vinaya Piṭaka* of the *Tipiṭaka*, which provide many details unavailable in the *suttā*. It also provides the timeline of critical *suttā* and significant events.

13. Therefore, the Buddha did not recite each *sutta* as it appears in the *Tipiṭaka*. If so, it would have been delivered within 15 minutes! Instead, the discussion of the *sutta* continued for several days until all five ascetics attained the *Sotāpanna* stage. **Attaining magga phala is not a magical process.** In particular, the *Sotāpanna* stage requires only understanding the worldview of the Buddha.

- It will take many people a lifetime to fully understand the *Dhammacakkappavattana sutta*.
- We must remember that many generations orally transmitted all the *suttā* in the *Tipiṭaka*. *Tipiṭaka* was written down about 500 years after the *Parinibbāna* of the Buddha. See [“Preservation of the Dhamma.”](#)
- It appears that the Buddha summarized the material in each *sutta* concisely to a limited number of verses suitable for oral transmission (easy to remember); see [“Sutta Interpretation – Uddesa, Niddesa, Patiniddesa.”](#)
- Summarized verses must be explained in detail by those who have understood them. As we have seen, even single words like “*anicca*” and “*dukkha*” need detailed explanations (not merely “impermanence” and “suffering.”) Those words DO NOT have corresponding single words in other languages. We must use those Pāli words with an understanding of their meanings.

17.7.3 Majjhimā Paṭipadā – Way to Relinquish Attachments to this World

January 22, 2016; Revised January 23, 2016; July 19, 2020; May 16, 2023

Please read the first post on the *Dhammacakkappavattana Sutta* (also called *Dhamma Cakka Pavattana Sutta*) before reading this second post: [“Dhammacakkappavatta Sutta – Introduction.”](#)

1. In almost all English translations, *majjhimā paṭipadā* is termed the “middle way of the Buddha”. This gives the impression that all one needs to do is avoid extreme sense pleasures and extreme hardships for the body. In general, that is true, but the Buddha meant something more profound. One should live such a simple and comfortable life but should start seeing the dangers of craving sensory pleasures.

- Many Pāli words have two meanings: conventional (mundane) and transcendental (*lokuttara*). We saw that the Noble Eightfold Path could be interpreted either way: [“Buddha Dhamma – In a Chart”](#) or [“Mahā Cattārīsaka Sutta \(Discourse on the Great Forty\).”](#) As I explained in [“Sutta Interpretation – Uddesa, Niddesa, Patiniddesa.”](#) I believe this was a strategy by the Buddha to facilitate at least the conventional transmission of the *Tipiṭaka* during times when *Ariyā* (Noble Persons) were few in number to explain the *lokuttara* meanings of key Pāli words.
- Thus *majjhimā paṭipadā* is the “middle path” in the conventional sense, and it is an excellent first step. But the *lokuttara* meaning is more profound, and this *sutta* lays out the basic structure of explaining the more profound meaning. Throughout the 45 years of his ministry, Buddha explained the details in various ways.
- One *lokuttara* (or deeper/transcendental) meaning of *majjhimā paṭipadā* is to “avoid being intoxicated by sense pleasures.” See, [“Need to Experience Suffering in Order to Understand it?”](#) Here we will examine It in detail to show that it is a gradual process. High levels of intoxication are removed via

removing *micchā diṭṭhi* when attaining the *Sotāpanna* stage. After that, lower and lower intoxication levels are removed as one gain more wisdom in steps.

- We will follow the text of the *sutta* in this pdf: [Dhammacakkappavattana Sutta-3](#)

2. First, I want to emphasize what is meant by “relinquish” in the title. It means “voluntarily giving up” and NOT giving up attachments to this world by sheer will or force. This is something most people do not comprehend either. **The mind will not give up things that it considers pleasurable unless there is a good reason.**

- Those reasons are what Buddha Dhamma is all about. One becomes a *Sotāpanna* by truly comprehending why it is not only unfruitful, but also DANGEROUS to attach to things that one perceives to be pleasurable. But even a *Sotāpanna* only has “seen” the truth of the “*anicca* nature” of this world of 31 realms.
- The actual “giving up” comes next, when one slowly starts “giving up” voluntarily and progress through the next two stages of *Sakadāgāmī* and *Anāgāmī*, and eventually gives up all attachments at the *Arahant* stage.
- Thus one does not need to worry about giving up ANYTHING until reaching the *Sotāpanna* stage. Giving up happens automatically when one realizes the true nature of this world.

3. In the first verse of section 2 of the above pdf says, “*Bhikkhus*, what is the *majjhimā paṭipadā* declared by the *Tathāgata* (Buddha) that leads to the vision, wisdom, calming down, special knowledge (*abhiññā*), comprehend “*saṃ*” (*sambodhi*), and to *Nibbāna*?”

- “It is the Noble Eightfold Path with *sammā diṭṭhi*, *sammā saṅkappa*, *sammā vācā*, *sammā kammanā*, *sammā ājīva*, *sammā vāyāma*, *sammā sati*, *sammā samādhi*.”
- In the third verse, he affirms that it is indeed the Path or the *majjhimā paṭipadā*.

4. In section 3, the Four Noble Truths are **briefly stated** (*uddesa*; see, “[Sutta -Introduction](#)”), and each can be described in detail filling thousands of books, depending on the level of detail.

- First, suffering is: “*Jāti’pi dukkhā, jarā’pi dukkhā,....*”. This verse we have already analyzed in “[Does the First Noble Truth Describe only Suffering?](#),” among others.
- The next verse succinctly states the causes of suffering (*dukkha samudhaya*): “The root cause is *taṇhā*. The tendency to attach to various things (*yayam taṇhā*) makes *bhava* (*ponobbhavikā*) through valuing such things (*nandirāga*) and giving priority to them (*abhinandini*). These things are: craving for sense pleasures (*kāma taṇhā*), *bhava taṇhā*, and *vibhava taṇhā*.” The three types of *taṇhā* are discussed in: “[Kāma Taṇhā, Bhava Taṇhā, Vibhava Taṇhā](#).”
- The third verse is the truth about how to eliminate those causes: “By removing *taṇhā* without a trace (*yeva taṇhāya asesavirāga-nirodho*), by giving without expecting anything back (*cāgo*), by cutting off all bonds (*paṭinissaggo*), by becoming un-entangled (*mutti*), by removing all attachments (*anālayo*)”.
- And the fourth is the way to do that, i.e., via the Noble Eightfold Path that was stated in #3 above.
- Other posts further describe the above four Noble Truths in more detail. You can use the “Search” box on the top right or scan the “[Pure Dhamma – Sitemap](#)” to locate relevant posts. There are so many ways to present the material.

5. Sections 4 through 7 describe how the Buddha attained Buddhahood via comprehending *tiparivaṭṭa* (three walls of bondage) that keep one trapped in the rebirth process. *Paṭicca Samuppāda* describes the process of generating new rebirths. That has never been known to the world (except during the times of previous Buddhas): “*.pubbe ananussutesu dhammesu...*”.

- We discussed the term *tiparivaṭṭa* or the “three rounds of bondage” briefly in the previous post. We will discuss it in more detail in the next post.

- I would like to first discuss the term, “*.pubbe ananussutesu dhammesu cakkhuṃ udapādi, ñāṇaṃ udapādi, paññā udapādi, vijjā udapādi, āloko udapādi...*”.

6. When the Buddha attained Buddhahood by comprehending this Dhamma that had never been known to the world, five types of special knowledge arose in him. Those are *cakkhu*, *ñāṇa*, *paññā*, *vijjā*, and *āloka*.

- Here “*cakkhu*” is the “Dhamma eye”, the ability to “see” the true nature of this world. We can loosely translate *ñāṇa* and *paññā* as “knowledge” and “wisdom”.
- The next one is “*vijjā*” (the Sanskrit word is “*vidyā*”). This is the “ultimate science” about the world, what I call the “[Grand Unified Theory of Dhamma](#).” A Buddha is the most outstanding scientist that comes to the world very infrequently.
- Simultaneously with the comprehension of *vijjā*, **one is totally removed from “this material world” or “*āloka*” (“*ā*” + “*loka*”).** The word “*āloka*” has other meanings, including “light.”

7. Those five factors arise simultaneously in a Buddha upon attaining the Buddhahood, but all others attain them in stages. For a normal human being:

- “*Cakkhuṃ udapādi*” or “arising of the Dhamma eye” occurs upon attaining the *Sotāpanna* stage, i.e., *sammā dīṭṭhi*.
- “*Nāṇaṃ udapādi*” takes place upon attaining the *Sakadāgāmī* stage.
- “*Paññā udapādi*” takes place upon attaining the *Anāgāmī* stage.
- “*Vijjā udapādi*” takes place upon attaining the *Arahant* stage, where “*āloko udapādi*” takes place simultaneously.

8. In section 9, it is stated, “*.āyasmato Koṇḍañña virajam vītamalam dhammacakkhuṃ udapādi—yam kiñci samudayadhammaṃ sabbam taṃ nirodhadhamman’ti*”.

- Upon hearing this first *desanā*, the ascetic Koṇḍanna became a *Sotāpanna*, and “*dhamma cakkhuṃ udapādi*” or “Dhamma eye arose in him”.
- The next part of the verse, “*yam kiñci samudayadhammaṃ sabbam taṃ nirodhadhamman’ti*” states what that Dhamma eye grasped: “any Dhamma that gives rise to this world (*samudaya dhamma*), is a Dhamma that can be stopped from arising again (i.e., it is a *nirodha dhamma*)”.
- Thus at the *Sotāpanna* stage, one can “see” how this “*nirodha*” is done. Actually doing it leads to the following stages of *Nibbāna* and eventually to *Arahanthood*.
- One gets to the *Sotāpanna* stage (overcoming the first round of the *tiparivaṭṭa*) by comprehending the broader worldview and seeing the fruitlessness of “high levels of intoxication” just through that understanding.

9. When a *Sotāpanna* acquires the second knowledge (“*Ñāṇaṃ udapādi*”), that is when he/she really “**STARTS to see the *anicca* nature a bit more by cutting through apparent pleasures of the world with the Dhamma eye**”. This process continues through the next phase, “*Paññā udapādi*” when one is able to really see the adverse effects and the dangers of any sense pleasures and attains the *Anāgāmī* stage.

- Thus, as you can see, the actual “giving up” happens gradually and naturally. One does not need to, and one should not try to, give up sense pleasures by sheer willpower (except, of course, those acts that are called “*pāpa kamma*” i.e., that lead to the suffering of other beings).
- For example, one does not need to feel guilty about eating a nice meal, having a lovely house to live in, etc. Those are the results of previous good *kamma vipāka*. But what one needs to do is to reduce the CRAVING for such things by comprehending the *anicca* nature of this world, i.e., by learning Dhamma and by contemplating. One would realize that cravings/desires for worldly things are fruitless.

10. I can give a simple example from my experience. A few years ago, my wife and I noticed we had not watched television for many weeks. We decided it was pointless to keep paying for the cable service and

canceled the service (We still read the news on the internet). Thus we had not deliberately stopped watching television. We had gradually stopped watching even without us noticing it for several weeks. Of course, there have been more changes like that since then. I just wanted to mention this to emphasize that Buddha's Dhamma is not just a theory. It can be experienced: “..*sandiṭṭhiko, akāliko, ehipassiko*...”.

- Many of you may wonder why it is a good thing to stop watching TV (“that is something I enjoy after a hard day at work”). But that is a perception we all get used to. I remember being very agitated at night watching TV coverage of the 2008 US presidential election season. It is more enjoyable to listen to or read Dhamma.
- **Please note that I am not saying that one needs to stop watching TV to attain *magga phala* or that one who has attained the *Sotāpanna* stage would necessarily not watch TV.** There was a *Sotāpanna* (named Sarakāṇi) during the time of the Buddha who could not give up his drinking habit. It is only at the *Anāgāmi stage that one gives up kāma rāga* (sense pleasures) as mentioned above. But each person could reduce or even give up some sensory pleasures upon attaining the *Sotāpanna* stage, depending on one's personality (*gati*).

11. I also would like to point out that one should not restrict one's time only to learning Dhamma. **One should also engage in meritorious deeds and make homage to the Buddha, Dhamma, and Saṅgha as well. Those activities help get the mind to a state suitable for receiving and comprehending Dhamma.**

- This is a subtle aspect that was discussed in the “[Anantara and Samanantara Paccaya](#),” and a few other posts. Just like a seed needs suitable conditions (soil, water, sunlight, etc) to germinate and grow, one needs to make necessary conditions for the mind to be receptive to profound and subtle concepts by doing meritorious deeds that make one's mind joyful and calm. Engaging in giving (*dāna*) and living a moral life (*sīla*) help enormously with *Bhāvanā* (contemplation and comprehension).

17.7.4 Tiparivaṭṭa and Twelve Types of Ñāṇa (Knowledge)

January 29, 2016; revised January 7, 2019; February 22, 2020

Introduction

1. We discussed the *tiparivaṭṭa* (**three rounds of bondage**) briefly in the post “[Dhammacakkappavattana Sutta Interpretation – Uddesa, Niddesa, Paṭiniddesa](#).” Here we will discuss it in a bit more depth.

- We remind ourselves that the Buddha delivered this *sutta* to the five ascetics right after attaining the *Buddhahood*. The five ascetics first refused to believe that the ascetic Siddhartha had attained the *Buddhahood*. This and other details of Buddha's life described in the *Vinaya Piṭaka*, “[WebLink: suttacentral: Going forth \(Pabbajjā\)](#).” This particular account is in the sub-section, “ON THE GROUP OF FIVE.”
- According to that account, the five ascetics first refused to believe that ascetic Gotama had attained the *Buddhahood*. They did not believe Buddha's words!
- Some people ask me whether there is a way to know some other person has attained the *Sotāpanna* stage. Those five ascetics, who were with the ascetic Siddhartha for five years, could not even believe Buddha's own words. How can any of us figure out whether another person has attained *magga phala*? Unless that person declares it, there is no way to know. Even then, there is no way to verify it. Now let us get back to the *sutta*.

Four Noble Truths Comprehended in Three Rounds (*Tiparivaṭṭa*)

2. At each round of the three rounds (*tiparivaṭṭa*), three pieces of knowledge about the Four Noble Truths arose in the Buddha. Those 12 pieces of knowledge stated in section 4 through 7 of the *sutta*.

- We will follow the text of the *sutta* (you may want to print it out so that you can refer to each section): [Dhammacakkappavattana Sutta Text](#).
- Of course the Buddha attained all 12 types of knowledges together upon attaining the Buddhahood, but we (normal humans) achieve them in four stages of *Sotāpanna*, *Sakadāgāmi*, *Anāgāmi*, and *Arahant*.

The Three Rounds or Barriers

3. There are three rounds or barriers (*ti + parivaṭṭa*) to overcome: (1) The *apāyā* or the four lowest realms, (2) *kāma loka* (human realm and the six *deva* realms), (3) *rūpa loka* (16 *rūpi brahma* realms) and *arūpa loka* (4 *arūpi brahma* realms).

- At each round, one comprehends the Four Noble Truths to a certain extent.
- For example, when one becomes a *Sotāpanna* and overcomes the first round (barrier), he/she understands **all Four Noble truths** to some extent. When one becomes an *Anāgāmi* by overcoming the second round, he/she has understood **all Four Noble truths** to a higher level, and it is complete at the *Arahant* stage.
- The Four Noble Truths are discussed at, [“Four Noble Truths – Suffering and Its Elimination.”](#)

First Noble Truth in Three Rounds

4. First is the knowledge about the suffering in the wider world of 31 realms, as stated in verse 4(i) (***Idan dukkhan ariyasaccan’ti me***). This Dhamma had never been known to the world. That is what a average human comprehends when he/she attains the *Sotāpanna* stage, and overcomes the first round of bondage in the three rounds (*tiparivaṭṭa*), i.e., becomes free of rebirths in the *apāyā*.

- Then that knowledge becomes even more evident when one starts to lose attachments to this world; verse 4(ii). That is the second round of *tiparivaṭṭa* overcome at the *Anāgāmi* stage. The keyword is ***“pariññeyyan’ti,”*** which means “seeing with less attachment to sense cravings” or *“pirisindha”* (“*piri*” or liking + *“sindha”* or removed in Sinhala). Thus an *Anāgāmi* will never be reborn in the *kāma loka* (i.e., overcome the second round of *tiparivaṭṭa*). [*pariññeyya* : [nt.] what should be known accurately]
- The last round is when “seeing” is done with all cravings removed, as stated by ***“pariññātan’ti.”*** This happens to a human when attaining the *Arahant* stage. But here it is stated, ***“pariññātan’ti me,”*** as stated by the Buddha, where ***“me”*** means “I” in verse 4(ii). That will become more clear in section 8. [*pariññāta* : [pp. of parijānāti] known for certain; comprehended; known accurately.]
- These three types of knowledge are about the First Noble Truth, *dukkha sacca*.

Second Noble Truth in Three Rounds

5. Section 5 describes three pieces of knowledge for Second Noble Truth, the causes for suffering (*dukkha samudaya*). The Four Noble Truths are succinctly stated in Section 3.

- At the second round of the *tiparivaṭṭa* the **root cause** for suffering identified as *“taṇhā”*; verse 5(i): ***Idan dukkhasamudayan ariyasaccan’ti me***. This is the knowledge a *Sotāpanna* acquires simultaneously with round 1 for *dukkha sacca*. See, [“Tanhā – How We Attach Via Greed, Hate, and Ignorance”](#) for a discussion on *taṇhā*.
- In the second round, one realizes that cause for suffering is attachments to all sensory pleasures (*kāma rāga*): ***“pahātabban’ti,”*** where *“pahā”* means “to remove”. For an average human, this knowledge comes in two stages of *Sakadāgāmi* and *Anāgāmi*; verse 5(ii). [*pahātabba* : which must be discarded, to be eliminated.]
- In the third round, at the *Arahant* stage, one realizes without any doubt that any *taṇhā* is a cause for suffering: ***“pahīnan’ti”***; verse 5(iii). [*pahīna* : [pp. of pajahati] eliminated; abandoned; destroyed.]

- These three types of knowledge are about the Second Noble Truth, *dukkha samudaya sacca*.

Third Noble Truth in Three Rounds

6. Section 6 describes the three pieces of knowledge for Third Noble Truth, stopping causes for suffering (*dukkha nirodhaya*).

- At the first round of the *tiparivaṭṭa* one realizes that *taṇhā* must be removed to end the suffering; ***Idaṃ dukkhanirodhan ariyasaccan'ti me***. As stated in section 3: “..Yo tassā yeva taṇhāya asesa-virāga-nirodho, chāgo, paṭinissaggo, mutti, anālayo...” This was discussed in the previous post, “[Majjima Patipada – Way to Relinquish Attachments to this World](#).” That realization sets in at preliminary level in the first round (i.e., Sotāpanna stage.) verse 6(i).
- In the second round, the need to lose all attachments to sensory pleasures (*kāma rāga*) is realized: “***sacchikātabban'ti***.” For a normal human, this knowledge comes in two stages of *Sakadāgāmī* and *Anāgāmī*, when one actually starts seeing the perils of *kāma rāga*; verse 6(ii). [***sacchikātabba***: [pt. p. of *sacchikaroti*] realising.]
- In the third round, one realizes without any doubt that any type of *taṇhā* (including *bhava taṇhā* and *vibhava taṇhā*) must be removed: “***sacchikatan'ti***”; verse 6(iii). [***sacchikata***: [pp. of *sacchikaroti*] realised; experienced for oneself.]

Fourth Noble Truth in Three Rounds

7. The way to accomplish this *nirodhaya* comes in three rounds, as stated in section 7.

- The Noble Eightfold Path as the way to liberation is first grasped in the first round. For a normal human, this knowledge is gained when attaining the *Sotāpanna* stage: ***Idaṃ dukkha nirodhagāmini paṭipadā ariyasaccan'ti me***. One “sees” the Path through the “Dhamma eye”: verse 7(i). An enormous amount of defilements disappear just with this “clear vision”. [***dukkha nirodhagāmini paṭipadā*** = *magga*] [***nirodha***: [m.] extinction; cessation; the final truth.] [***paṭipadā***, (f.) [fr. *paṭi+pad*] means of reaching a goal or destination, path, way, means, method, mode of progress.]
- Then in the second round, it is realized that one must cultivate the Noble Eightfold Path (*bhāvanā*) to remove the root causes (verse 7(ii)): ***bhāvetabban'ti*** [***bhāvetabba***: [pt. p. of *bhāveti*] should be cultivated.]
- In the third round, it is realized that one has completed that task, and there is nothing else to be done (verse 7(iii)): ***bhāvitan'ti*** [***bhāvita***: [pp. of *bhāveti*] increased; cultivated; developed.]
- However, as I mentioned above, all 12 types of knowledge arose in the Buddha simultaneously, upon attaining the Buddhahood.

Declaring the Attainment of the Buddhahood

8. In section 8, the Buddha says: “I had NOT previously declared the Buddhahood since I had not attained all 12 types of knowledge...” Here, “***na suvisuddham ahoṣi***” means “had **not** accomplished it completely”.

- In the next phrase, the Buddha declares that he has now done that (***suvisuddham ahoṣi***), and that he is declaring to the “.. world of humans, *Devā, Brahmā*,..” that he has attained the Buddhahood.
- In the next verse (Section 9,) he declares: “the vision arose in me (***dassanaṃ udapādi***) , unmovable calm mindset arose in me (***akuppā me vimutti***), this is my last birth (***ayaṃ antīmā jātī***), and there will be no more *bhava* for me (***natthi' dāni punabbhavo***).”
- Lastly: “***Idamavoca Bhagavā***”: “Thus declared the Buddha.”

The Last Long Section

9. Section 10 stats that one of the five ascetics, Koṇḍañña, attained the *Sotāpanna* stage at the conclusion of the *desanā*. This section was discussed in the previous post, “[Majjima Patipada – Way to Relinquish Attachments to this World.](#)”

- Then those *Devā* and *Brahmā* who attended the *desanā* identified in a repetitive manner; see, “[Dhammacakkappavattana Sutta Interpretation – Uddesa, Niddesa, Patiniddesa.](#)”
- Note that this *sutta* mentions many of the 31 realms. Large numbers of *Devā* and *Brahmā* from most of those realms were present to hear the first discourse. I have marked in blue those different realms.

Path to Be Followed Sequentially

10. The important thing to understand is that one needs to go through these stages sequentially (only a Buddha goes through them at once). Some people try to get rid of “the perception of a self” even before the *Sotāpanna* stage. A “self” is going to be there until any kind of “*gati*” are still there. With the “*apāya gati*” removed at the *Sotāpanna* stage, one overcomes the first stage. “*Kāma gati*” reduce at the *Sakadāgāmi* stage, and eliminated at the *Anāgāmi* stage, thus overcoming the second round of bondage.

- The two *saṃyojanā* of *māna* and *uddhacca* go away only at the *Arahant* stage together with the other three *saṃyojanā* of *rūpa rāga*, *arūpa rāga*, and *avijjā*. *Māna* is the perception, “I need to be treated well because I am superior in some way.” The tendency to get at least irritated when not respected is *uddhacca*.
- However, the levels of *māna*, *uddhacca*, *avijjā* that an *Anāgāmi* has, are at much reduced level. They are gradually decrease through various stages of *Nibbāna* and disappear at the *Arahant* stage.
- Thus the critical step is to understand the nature of the wider world of 31 realms and get through the first round of bondage. That releases one from rebirths in the *apāyā* where the dangers are the highest. The only way to do that is to learn and contemplate the true and pure Dhamma. Relinquishing sense pleasures comes naturally after that. trying to give up sense pleasures forcefully before the *Sotāpanna* stage will only lead to frustration.

11. A normal human, no matter how intelligent, cannot grasp the dangers of existence in the wider world of 31 realms because of various forms of wrong views or *micchā diṭṭhi*. A Buddha discovers the existence of those realms and the unbearable suffering encountered (especially in the *apāyā*).

- Until one gets rid of the those wrong views and attain the *Sotāpanna* stage, it is impossible to “clearly see” the dangers of sense cravings.

Suttā Should Not Be Translated Word-by-Word

12. That is why a *sutta* cannot be translated word by word. A *sutta*, states the key ideas or steps. The key ideas need detailed explanations. This *sutta*, even though delivered overnight, is summarized in a few pages.

- The Buddha must have described what we discussed here plus much more during the several hours of delivery of the *sutta*. In the next post, we will try to discuss some details making the connection to concepts that we have already discussed in other sections.
- As we have seen, the same holds for other *suttā* and for *Paṭicca Samuppāda*. Just listing the eleven steps in *Paṭicca Samuppāda* will have no benefit. The steps in *Paṭicca Samuppāda* vary according to each individual *Paṭicca Samuppāda* cycle of relevance (*akusala-mūla*, *kusala-mūla*, etc.) Yet, the steps are same.

17.7.5 Relinquishing Defilement via Three Rounds and Four Stages

February 4, 2016; revised September 12, 2019

Tiparivattaya – Three Rounds of Bondage to This World

1. Here we will link the concepts like *tiparivattaya* in the *sutta* to other basic ideas that we have discussed in other sections throughout the site.

- I want to emphasize that “relinquish” means “giving up voluntarily, through acquired wisdom.”
- When one acquires wisdom, one realizes that defilement arise due to cravings for sense pleasures.
- The real danger is when cravings for sense pleasures lead to bad *kamma* (such as killing) that makes one eligible for the *apāyā*.

2. The Buddha gained all 12 types of knowledge at once in attaining the Buddhahood. However, an average human being will go through the *tiparivattaya* (or the three rounds of bondage) via four stages of *Nibbāna*. We can compare this to building a new complex structure.

- A *Sotāpanna* overcomes the **first round** by gaining the basic knowledge on the Four Noble Truths. Those are: what suffering is, the causes for suffering, stopping the causes from taking place, and the way to stop causes. It is seeing the plan to construct a building. All the details are in that blueprint.
- Let us continue with the analogy of constructing a building. The *Sakadāgāmi* stage is starting to build the building. With the basic structure finished, one is at the *Anāgāmi* stage. That overcomes the **second round**.
- When the building is all finished with the finer details, that is like attaining the *Arahant* stage. One has overcome the **third round**. There is nothing more to be done.

Sotāpanna Anugāmi

3. Even though the above analogy gives the basic idea, we need to examine it in more detail. It is the *Sotāpanna Anugāmi* (one who is striving to become a *Sotāpanna*) who does the bulk of the work. He/she needs to learn the necessary background on “how to design and build the building.”

- He/she cannot do that without learning the critical fundamentals from a Noble Person who has gone through at least one of the three rounds (or one of the four stages).
- Thus to become a *Sotāpanna Anugāmi*, one must learn the true nature of the world from an *Ariya* (at least a *Sotāpanna*). There are several posts on this issue. One can find by doing a keyword search or by looking through the posts under “[Sotāpanna stage of Nibbāna](#).”

4. To become a *Sotāpanna Anugāmi*, one first needs to get rid of the ten types of *micchā diṭṭhi*; see, “[Micchā Diṭṭhi, Gandhabba, and Sotāpanna Stage](#).”

- First, the mind needs to grasp that it has to be devoid of the extreme levels of greed (*lobha*), hate (*dosa*). That leads to a gradual reduction of total ignorance (*moha*) via learning the right message of the Buddha, i.e., one needs to see the dangers in acting with *lobha*, *dosa*, *moha*.
- One cannot grasp the dangers of the rebirth process if one does not believe that the four lowest realms with unimaginable suffering exist. Those who are striving to become *Sotāpanna* need to carefully read about what constitutes *micchā diṭṭhi*, for example, “[Key to Sotāpanna Stage – Diṭṭhi and Vicikicca](#).”

5. A subtle (but stronger) level of *micchā diṭṭhi* remains until one starts comprehending *Tilakkhaṇa* (*anicca*, *dukkha*, *anatta*). That means one needs to begin understanding that it is not possible to achieve AND maintain ANYTHING to one's satisfaction.

- Just by having learned the true nature of this world (*anicca*, *dukkha*, *anatta*), a *Sotāpanna Anugāmi* gradually removes a bulk of defilement and attains the *Sotāpanna* stage. Now he/she can see the Path to the *Arahanthood*.

- It is important to note that he/she did not have to remove any attachments BY FORCE. All he/she did was to comprehend Dhamma to the level to see not only the unfruitfulness but the dangers of the rebirth process. See, [“Is It Necessary for a Buddhist to Eliminate Sensual Desires?”](#)

Sotāpanna stage – First Round of Bondage Overcome

6. When one attains the *Sotāpanna* stage, one significantly reduces *lobha* (extreme greed), *dosa* (intense hate), and *moha* (sheer ignorance). They cut to the levels of *rāga* (attachment to worldly pleasures), *paṭigha* (tendency to become irritated when one does not get one wants), and *avijjā* (not fully knowing the true nature of the world). These terms discussed in [“Lobha, Dosa, Moha versus Raga, Patigha, Avijjā.”](#)

- By going through this first round of the *tiparivattaya*, a *Sotāpanna* removes the bulk of defilement. See, [“Why a Sotāpanna is Better off than any King, Emperor, or a Billionaire.”](#) That illustrates **how one is capable of doing immoral acts that makes one to be eligible for the *apāyā***, just because one has *micchā diṭṭhi*.
- It is essential to realize that there are many people with *micchā diṭṭhi* who go through their lives without doing any such horrible acts. **However, the possibility to do such an act remains with one through future lives until one attains the *Sotāpanna* stage. That is what is meant by *anusaya*, the hidden defilement. They can be removed only via learning and comprehending Dhamma.**

7. What is the reason that a *Sotāpanna* WILL NOT do any highly immoral act that makes him/her eligible to be born in the *apāyā*? It is not something he/she does consciously. Such decisions come automatically. That is the result of comprehending *anicca* (unfruitful) nature of this world.

It sinks into one’s mind that no matter what one can gain by doing such an act, it is going to far more dire consequences in the future. Not only that, but “what is the point of harming another being for anything in this world that one will have to eventually give up anyway?”

- It sinks to one’s mind that no matter what one can gain by doing such immoral actions, it will lead to far more dire consequences in the future. Not only that but “what is the point of harming another being for anything in this world?.” One will have to give up that eventually, when one dies!
- For example, one may kill someone and get a million dollars without getting caught, and may live a luxurious life. But he/she will pay for it by being born in the *apāyā* for millions of years to come.
- When one comprehends the *anicca* nature, one realizes deep down the foolishness (and the dangers) of such acts. *Anusaya* (craving) for such action will be removed when one attains the *Sotāpanna* stage. One would have shed such “*gati*” or character without a trace left. Again, there are many posts on these concepts.

The Second Round of the *tiparivattaya*

8. The second round of the *tiparivattaya* is tackled in by a *Sotāpanna* in two steps. First, to become a *Sakadāgāmī* and then to become an *Anāgāmī*. An *Anāgāmī* has gone through the second round.

- Remember that a *Sotāpanna* has reduced *lobha*, *dosa*, *moha* to the levels of *rāga*, *paṭigha*, and *avijjā*; see #4 above. *Rāga* means the attachments for things in this world, which are three basic types: (i) *Kāma rāga* means attachment to sense pleasures, i.e., those available in *kāma loka*. (ii) *Rūpa rāga* means attachment to *jhānic* pleasures in *rūpa loka*, and (iii) *Arūpa rāga* means attachment to *jhānic* pleasures in *arūpa loka*.
- *Kāma rāga* is actually of two “strengths”: “*klesha kāma*” [*klesha* is in Sinhala (*kilesā* is in Pāli)] means attachment to sense pleasures, and “*vatthu kāma*” (“*vatthu*” means “property”) is stronger because one also wants to own such sense objects.
- When a *Sotāpanna* sees the perils of sense pleasures and the tendency to angry (*paṭigha*), both *kāma rāga* and *paṭigha* are first reduced to the levels of a *Sakadāgāmī*. Here, one actually loses the “*vatthu*

kāma” completely. Thus, a *Sakadāgāmī* is said to be “healthy forever” because he will never be born with a body that is subject to diseases. That means he will never be born at or below the human realm.

- As one sees the perils of *kāma assāda* (sensory pleasures) starting at the *Sotāpanna* stage, one begins to see the world more clearly; see, “[Assāda, Ādinava, Nissarana – Introduction.](#)”

9. A *Sakadāgāmī* makes more progress via contemplating the drawbacks or perils (*ādinava*) of sense pleasures and overcomes the second round of bondage to become an *Anāgāmī*. Thus at this stage one eliminates the “*klesha kāma*” [*klesha* is in Sinhala (*kilesā* is in Pāli)] component of the *kāma rāga*, AND remainder of *paṭigha*.

- Thus an *Anāgāmī* has given up all attachments to the *kāma loka* (those including the human and *deva* realms), and hence will not be born anywhere in *kāma loka*.

The Third Round

10. Now we can see that an *Anāgāmī* has only the *rūpa rāga* and *arūpa rāga* remaining with him/her (which are low levels of greed). Furthermore, there is no trace of hate (*dosa*) or friction (*paṭigha*) left. Thus only rebirths in the *brahma realms* are possible for an *Anāgāmī*. Of course, there is still some of *avijjā* left-over too.

- When an *Anāgāmī* overcomes those remaining defilement from his/her mind, the mind becomes purified. Then one attains the *Arahant* stage of *Nibbāna* by overcoming the third round of the *tiparivattaya*.

11. We are bound to the perpetual cycle of rebirths via ten fetters called “*sanyojana* = “san+yojana”; see, “[What is “Sanj”? Meaning of Sansāra \(or Samisāra\)](#)”; *yojana* means bond. *Sanyojana* is sometimes called *saṃyojana*.

- Those ten *sanyojana* (or *saṃyojana*) are also gradually removed as one goes through the three rounds or *tiparivattaya* in four stages.
- At the *Sotāpanna* stage, one removes the two *sanyojana* of *sakkāya diṭṭhi* and *silabbata paramasa* by removing *micchā diṭṭhi*. One also removes the *vicikicchā sanyojana* that is associated with *moha*, and thus reduces *moha* to *avijjā*.

12. At the *Sakadāgāmī* stage, one reduces the two *sanyojana* of *kāma rāga* and *paṭigha*. Those two entirely removed by attaining the *Anāgāmī* stage.

- In terms of *sanyojana*, an *Anāgāmī* has five left to remove: *rūpa rāga*, *arūpa rāga*, *māna*, *uddhacca*, and *avijjā*. With the removal of those, one attains the *Arahanthood*.

Summary

13. Thus we can see that there are many types of analyses one can do. They all mean the same thing at the end. One needs to first comprehend the three characteristics of this world (*anicca*, *dukkha*, *anatta*) to some extent to reach the *Sotāpanna* stage. That is the first round of *tiparivattaya*. Then going through the second and third rounds of bondage via the next three stages of *Nibbāna* leads to the complete comprehension of *anicca*, *dukkha*, *anatta*. That leads to stopping the *sansāric* (or *samsāric*) journey filled with so much suffering.

14. Therefore, the whole journey is a truth-seeking mission about this world of 31 realms. That suffering can be intense in some realms. But one's comprehension of suffering is minimal at the beginning. The more one understands the true nature; one's mind AUTOMATICALLY gives up attachments to this world VOLUNTARILY.

- This is why *majjhimā paṭipadā* is not just “middle path” as discussed in a previous post in this series: “[Majjhimā Patipadā – Way to Relinquish Attachments to this World.](#)”

15. Thus, the *Dhammacakkappavattana sutta* (or *Dhamma Cakka Pavattana sutta*) gives the blueprint of what Buddha Dhamma is all about. What the Buddha did in the following 45 years was to describe this blueprint in detail in various ways.

- More details on the material in this post at “[Tiparivattaya and Twelve Types of Ñāṇa \(Knowledge\)](#).”
- One could scan through all the posts at: [Pure Dhamma – Sitemap](#)

17.8 Anguttara Nikāya – Suttā on Key Concepts

June 20, 2018

Anguttara Nikāya has many short *suttā* (note that plural of *sutta* is *suttā*) with key information; see, “[Nikāya in the Sutta Piṭaka](#).” In this subsection, we will discuss many such *suttā* at various levels.

“[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma](#)“

“[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma – 2](#)“

17.8.1 Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma

June 20, 2018; revised February 17, 2021

Moral Basis of Buddha Dhamma

1. *Dasa kusala* and *dasa akusala* are the moral foundations of Buddha Dhamma. Nature's laws are based on them.

- A wide variety of synonyms are given for *dasa kusala* and *dasa akusala* in a number of short *suttā* in *Anguttara Nikāya*; see, “[Anguttara Nikāya – Suttā on Key Concepts](#).”
- Any one of *Dasa akusala* corrupts a mind, and they lead to *saṃsāric* suffering.
- Any one of *Dasa kusala* purifies a mind, and they lead to permanent happiness (*Nibbāna*).

Two Types of *Micchā Diṭṭhi* – Removed Sequentially

2. We can easily see connections to a number of key Pāli words and concepts with this information.

- The most potent of the *dasa akusala* is *micchā diṭṭhi*, which basically corrupts the mind and leads to other nine types of *akusala*. As we have discussed, *micchā diṭṭhi* is of two types: 10 types of *micchā diṭṭhi* and being unaware of *Tilakkhaṇa*.
- As one first starts getting rid of the 10 types of *micchā diṭṭhi*, one's tendency to do the other nine types of *akusala* will decrease. This is the same as saying that one will be cultivating *sammā diṭṭhi* and the tendency to do other nine types of *kusala* will also increase.
- One is fully on the mundane path when one gets rid of the 10 types of *micchā diṭṭhi*. One switches to the Noble Path when one starts comprehending *Tilakkhaṇa*.

Deeper Level of *Micchā Diṭṭhi* Is Not Comprehending Four Noble Truths/*Paṭicca Samuppāda*/*Tilakkhaṇa*

3. This is why *dasa kusala* and *dasa akusala* are really the moral foundation of Buddha Dhamma. All deeper concepts like *anatta* are embedded in these as the deeper level of *micchā diṭṭhi*; see, “[Sakkāya Diṭṭhi and Paṭicca Samuppāda](#).”

- I had used two other *suttā* (note that plural of *sutta* is *suttā*) not listed below to point out the connection to *anatta* in that post.
- The other concepts listed below: *Dhamma/Adhamma*, *Ariya dhamma/Anariya dhamma*, *Saddhamma* (beneficial *dhamma*)/*Assaddhamma*, *Sappurisa* (moral) *dhamma* /*Asappurisa dhamma*, *Sādhū* (praiseworthy)/*Asādhū*, *Tapaniya* (lead to a stressful mind) /*Atapaniya*, *Acayagāmi* (lead to rebirth)/*Apacayagāmi*, *Dukkudrayo* (lead to suffering) *dhamma* /*Sukkudrayo dhamma*, *Ariyo magga/Anariya magga*.

- Several other concepts become clear from other *suttā*, showing connections to other concepts. I may add more *suttā*, as I find them.

Pali

English

Kusala Sutta (AN 10.180)

“Kusalañca vo, bhikkhave, desessāmi akusalañca. Taṃ suṇātha ... pe ... katamañca, bhikkhave, akusalaṃ? Pāṇātipāto ... pe ... micchādiṭṭhi—idaṃ vuccati, bhikkhave, akusalaṃ.

Katamañca, bhikkhave, kusalaṃ? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—idaṃ vuccati, bhikkhave, kusalaṃ”ti.

Akusala: taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views **(defined in terms of *dasa akusala*).**

Kusala: Opposites: see, “[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)”

Akusala Sutta (AN 10.136)

“Akusalañca vo, bhikkhave, desessāmi kusalañca. Taṃ suṇātha ... pe ... katamañca, bhikkhave, akusalaṃ? Micchādiṭṭhi ... pe ... micchāvimutti—idaṃ vuccati, bhikkhave, akusalaṃ. Katamañca, bhikkhave, kusalaṃ? Sammādiṭṭhi ... pe ... sammāvimutti—idaṃ vuccati, bhikkhave, kusalaṃ”ti.

Akusala: Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong *samādhi*, wrong understanding, wrong *vimutti* **(defined in terms of *micchā* path).**

Kusala: Opposites in the Noble Eightfold Path.

We see that *Kusala/Akusala* can be defined in two ways (*dasa akusala/dasa kusala* or *micchā* path/Noble Path), as shown by the above two *suttā*. The same is true for all other terms discussed below. However, in order to save space, I will just provide the name of the sutta on the right that gives the definition in terms of *micchā* path/Noble Path.

Dhamma Sutta (AN 10.182) and Dhamma Sutta (An 10.138)

“Dhammañca vo, bhikkhave, desessāmi adhammañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, adhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, adhammo.

Katamo ca, bhikkhave, dhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, dhammo”ti.

Adhammo: taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Dhammo: Opposites: see, “[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)”

Ariyadhamma Sutta (AN 10.179) and Ariyadhamma Sutta (AN 10.135)

“Ariyadhammañca vo, bhikkhave, desessāmi anariya-dhammañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, anariyo dhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, anariyo dhammo.

Katamo ca, bhikkhave, ariyo dhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, ariyo dhammo”ti.

Anariyadhammo: taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Ariyadhammo: Opposites: see, “[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)”

Saddhamma Sutta (AN 10.191) and Saddhamma Sutta (AN 10.147)

“Saddhammañca vo, bhikkhave, desessāmi asaddhammañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, asaddhammo? Pāṇātipāto ... pe ...

Asaddhammo (Asath/Bad dhamma): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech,

Second part: “[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma -2.](#)”

17.8.2 Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma – 2

June 27, 2018

This is the second post in a series. The first post: “[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma.](#)”

1. *Dasa kusala* and *dasa akusala* are the foundations of Buddha Dhamma. Nature’s laws are based on them.

- A wide variety of synonyms are given for *dasa kusala* and *dasa akusala* in a number of short *suttā* in *Āṅguttara Nikāya*; see, “[Āṅguttara Nikāya – Suttā on Key Concepts.](#)”
- *Dasa akusala* corrupt a mind and they lead to *sansāric* suffering.
- *Dasa kusala* purify a mind and they lead to permanent happiness (*Nibbāna*).

2. We can easily see connections to a number of **key Pāli words and concepts** with this information.

- The most potent of the *dasa akusala* is *micchā diṭṭhi*, which basically corrupts the mind and lead to other nine types of *akusala*. As we have discussed, *micchā diṭṭhi* is of two types: 10 types of *micchā diṭṭhi* and being unaware of the deeper laws of Nature including *Tilakkhaṇa* (sometimes *asubha* nature is also included, in addition to the *anicca, dukkha, anatta* nature).
- As one first starts getting rid of the 10 types of *micchā diṭṭhi*, one’s tendency to do other nine types of *akusala* will decrease. This is the same as saying that one will be cultivating *samma diṭṭhi* and the tendency to do other nine types of *kusala* will also increase.
- One is fully on the mundane path when one gets rid of the 10 types of *micchā diṭṭhi*. One switches to the Noble Path when one starts comprehending *Tilakkhaṇa*.

3. This is why *dasa kusala* and *dasa kusala* are really the foundation of Buddha Dhamma. All deeper concepts like *anatta* are embedded in these; see, “[Dasa Akusala and Anatta – The Critical Link.](#)”

- I had used the first two *suttā* (note that plural of *sutta* is *suttā*) listed below to point out the connection to *anatta* in that post.
- The other *suttā* listed below involve several more of **deeper** concepts: *Attho(Atto)*, *Āsava*, *Sāvajja* (Blameworthy), *Uppādetabba* (should arise in a mind), *Āsevitabba* (to be associated with), *Bhāvetabba* (to be used), *Bahulikatabba* (to be used frequently), *Anussaritabba* (to be thought about or contemplated).
- In the previous post I discussed *suttā* involving the following **basic** concepts: *Dhamma/Adhamma*, *Ariya dhamma/Anariya dhamma*, *Saddhamma* (beneficial *dhamma*)/*Assaddhamma*, *Sappurisa* (moral) *dhamma* /*Asappurisa dhamma*, *Sādhū* (praiseworthy)/*Asādhū*, *Tapaniya* (lead to a stressful mind) /*Atapaniya*, *Acayagāmi* (lead to rebirth)/*Apacayagāmi*, *Dukkudrayo* (lead to suffering) *dhamma* /*Sukkudrayo dhamma*, *Ariyo magga/Anariya magga*;

see, “[Dasa Akusala/Dasa Kusala – Basis of Buddha Dhamma.](#)”

- In future posts I will discuss other *suttā*, showing connections to other concepts.

Pali

English

Attha Sutta (AN 10.181)

“*Atthañca vo, bhikkhave, desessāmi anatthañca. Taṃ suñātha, sādhuṇaṃ manasi karoṭha,*

Anattho (One without refuge/protection): taking a life, stealing, abusing sense pleasures, speaking

Pali

bhāsisāmī”ti. “*Evam, bhante*”ti *kho te bhikkhū bhagavato paccassosum. Bhagavā etadavoca: “katamo ca, bhikkhave, **anatto**? Pāṇātipāto, adinnādānaṃ, kāmesumicchācāro, musāvādo, pisuṇā vācā, pharusā vācā, samphappalāpo, abhijjhā, byāpādo, micchādīṭṭhi—ayaṃ vuccati, bhikkhave, anatto.*

*Katamo ca, bhikkhave, **attho**? Pāṇātipātā veramaṇī, adinnādānā veramaṇī, kāmesumicchācārā veramaṇī, musāvādā veramaṇī, pisuṇāya vācāya veramaṇī, pharusāya vācāya veramaṇī, samphappalāpā veramaṇī, anabhijjhā, abyāpādo, sammādīṭṭhi—ayaṃ vuccati, bhikkhave, attho*”ti.

Attha Sutta (AN 10.137)

“*Atthañca vo, bhikkhave, desessāmi anattañca. Taṃ suṇātha, sādhukaṃ manasi karoṭha, bhāsisāmī*”ti. “*Evam, bhante*”ti *kho te bhikkhū bhagavato paccassosum. Bhagavā etadavoca: “katamo ca, bhikkhave, **anatto**? Micchāsāṅkappo, micchāvācā, micchākammanto, micchājīvo, micchāvāyāmo, micchāsati, micchāsamādhi, micchāñāṇaṃ, micchāvimutti—ayaṃ vuccati, bhikkhave, anatto.*

*Katamo ca, bhikkhave, **attho**? Sammādīṭṭhi, sammāsāṅkappo, sammāvācā sammākammanto, sammājīvo, sammāvāyāmo, sammāsati, sammāsamādhi, sammāñāṇaṃ, sammāvimutti—ayaṃ vuccati, bhikkhave, attho*”ti.

We see that *attho/anatto* can be defined in two ways (*dasa akusala/dasa kusala* or *micchā* path/Noble Path), as shown by the above two *suttā*. The same is true for all other terms discussed below. However, in order to save space, I will just provide the name of the *sutta* on the right that gives the definition in terms of *micchā* path/Noble Path.

Āsava Sutta (AN 10.183) and Sāsava Sutta (AN 10.139)

“*Sāsavañca vo, bhikkhave, dhammaṃ desessāmi anāsavañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **sāsavo dhammo**? Pāṇātipāto ... pe ... micchādīṭṭhi—ayaṃ vuccati, bhikkhave, sāsavo dhammo.*

*Katamo ca, bhikkhave, **anāsavo dhammo**? Pāṇātipātā veramaṇī ... pe ... sammādīṭṭhi—ayaṃ vuccati, bhikkhave, anāsavo dhammo*”ti.

English

untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views (**defined in terms of *dasa akusala***).

Attho (One with refuge/protection): Opposites: see, "[Dasa Akusala and Anatta – The Critical Link](#)"

Anatto (One w/o refuge or protection): Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong *samadhi*, wrong understanding, wrong *vimutti* (defined in terms of *micchā* path).

Attho (One with refuge/protection): Opposites in the Noble Eightfold Path.

Sāsava Dhamma (that help cultivate āsava):

Wrong views, wrong thoughts, wrong speech, wrong actions, wrong livelihood, wrong effort, wrong mindset, wrong *samadhi*, wrong understanding, wrong *vimutti* (**defined in terms of *micchā* path**).

Anāsava Dhamma (that remove āsava):

Opposites in the Noble Eightfold Path.

Pali

English

Sāvajja Sutta (AN 10.184) AND Sāvajja Sutta (AN 10.140)

“Sāvajjañca vo, bhikkhave, dhammaṃ desessāmi anavajjañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **sāvajjo dhammo**? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, sāvajjo dhammo.

Katamo ca, bhikkhave, **anavajjo dhammo**? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, anavajjo dhammo”ti.

Sāvajja Dhammo (blameworthy): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Anavajjo dhammo (praiseworthy): Opposites: see, "[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)"

Uppādetabbadhamma Sutta (AN 10.193) AND Uppādetabba Sutta (AN 10.149)

“Uppādetabbañca vo, bhikkhave, dhammaṃ desessāmi na uppādetabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, na uppādetabbo dhammo? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, na uppādetabbo dhammo.

Katamo ca, bhikkhave, uppādetabbo dhammo? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, uppādetabbo dhammo”ti.

na Uppādetabbo Dhammo (dhamma that should not arise): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Uppādetabba Dhammo (dhamma that should arise): Opposites: see, "[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)"

Āsevitabbadhamma Sutta (AN 10.194) and Āsevitabba Sutta (AN 10.150)

“Āsevitabbañca vo, bhikkhave, dhammaṃ desessāmi nāsevitabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **nāsevitabbo dhammo**? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, nāsevitabbo dhammo.

Katamo ca, bhikkhave, **āsevitabbo dhammo**? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, āsevitabbo dhammo”ti.

Nāsevitabba dhammo (dhamma that one should not be associated with): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Āsevitabbadha dhammo (dhamma that one should be associated with): Opposites: see, "[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)"

Bhāvetabbadhamma Sutta (AN 10.195) AND Bhāvetabba Sutta (AN 10.151)

“Bhāvetabbañca vo, bhikkhave, dhammaṃ desessāmi na bhāvetabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **na bhāvetabbo dhammo**? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, na bhāvetabbo dhammo.

Katamo ca, bhikkhave, **bhāvetabbo dhammo**? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, bhāvetabbo dhammo”ti.

Dhamma should not be used (na bhāvetabbo dhammo): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Dhamma that should be used (bhāvetabbo dhammo): Opposites: see, "[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)"

Pali

English

Bahulīkātabba Sutta (AN 10.196) AND Bahulīkattabba Sutta (AN 10.152)

“Bahulīkātabbañca vo, bhikkhave, dhammaṃ desessāmi na bahulīkātabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **na bahulīkātabbo dhammo**? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, na bahulīkātabbo dhammo.

Katamo ca, bhikkhave, **bahulīkātabbo dhammo**? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, bahulīkātabbo dhammo”ti.

Dhamma that should not be frequently associated with (*na bahulīkātabbo dhammo*): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Dhamma that should be frequently associated with (*bahulīkātabbo dhammo*): Opposites: see, "[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)"

Sacchikātabba Sutta (AN 10.198) AND Sacchikātabba Sutta (AN 10.154)

“Sacchikātabbañca vo, bhikkhave, dhammaṃ desessāmi na sacchikātabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **na sacchikātabbo dhammo**? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, na sacchikātabbo dhammo.

Katamo ca, bhikkhave, **sacchikātabbo dhammo**? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, sacchikātabbo dhammo”ti.

Dhamma that should not be experienced (*na sacchikātabbo dhammo Dhammo*): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

(Dhamma that should be experienced (*sacchikātabbo dhammo*): Opposites: see, "[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)"

Anussaritabbadhamma Sutta (AN 10.197) AND Anussaritabba Sutta (AN 10.153)

“Anussaritabbañca vo, bhikkhave, dhammaṃ desessāmi nānussaritabbañca. Taṃ suṇātha ... pe ... katamo ca, bhikkhave, **nānussaritabbo dhammo**? Pāṇātipāto ... pe ... micchādiṭṭhi—ayaṃ vuccati, bhikkhave, nānussaritabbo dhammo.

Katamo ca, bhikkhave, **anussaritabbo dhammo**? Pāṇātipātā veramaṇī ... pe ... sammādiṭṭhi—ayaṃ vuccati, bhikkhave, anussaritabbo dhammo”ti.

Dhamma that should not be thought about (*na anussaritabbo dhammo*): taking a life, stealing, abusing sense pleasures, speaking untruth, slandering, harsh speech, gossiping, greed, ill-will, wrong views.

Dhamma that should be thought about (*anussaritabbo dhammo*): Opposites: see, "[Kilesa – Relationship To Akusala, Kusala, And Puñña Kamma](#)"

17.9 Na Cetanākaraṇīya Sutta

May 21, 2018; revised May 23, 2018; November 19, 2021; July 23, 2022

1. “*Na Cetanākaraṇīya Sutta*” is the correct name of the *sutta*, NOT “*Cetanākaraṇīya Sutta*,” as it is entitled on several websites, including the Sutta Central website: “[WebLink: suttacentral: Cetanākaraṇīyasutta \(AN 11.2\)](#).” The English translation there is entitled accordingly and erroneously: “Making a Wish.”

- *Cetanā* is what one intends or wishes; *karaṇīya* means “what one should do,” and “*na*” means “not.” The *sutta* is the teaching: “Just by wishing such and such, one will not get to *Nibbāna*.”
- The correct title appears in the Pāli/Sinhala Buddha Jayanthi Tipiṭaka Series XXIII, *Aṅguttara Nikāya* (Part 6, p.586).
- Therefore, the English title of the *sutta* should be something like “Making a Wish Will Not Work.”

2. It is a fairly short *sutta*. So, I decided to translate the full *sutta* and put it side-by-side with the Pāli version so that one can see how it is translated.

- As mentioned above, there is no point in just chanting or repeating to oneself, “May I be free of this, May I be that,” etc.
- One must map out what must be done to stop future suffering and follow that path. There are no easy solutions like sitting down in a quiet place and just chanting or meditating, even though that should be a part of the whole process.
- This step-by-step process is summarized clearly in the *sutta*.
- I have put in bold every other verse, so it would be easier to match the English and Pāli verses.

“For a person engaged in moral conduct (*sīla*), and “*Sīlavato, bhikkhave, sīlasampannessa na* is thus moral and virtuous, **there is no need to wish *cetanāya karaṇīyaṃ*: ‘avippaṭṭisāro me (*cetanā*): “May I be able to act with a calm mind.”** *uppañjātū’ti. Dhammatā esā, bhikkhave, yaṃ Agitation of the mind does not arise in a person sīlavato sīlasampannessa avippaṭṭisāro uppañjati. engaged in sīla and is virtuous.*

“For a person free from an agitated mind, **there** *Avippaṭṭisāriṣṣa, bhikkhave, na cetanāya is no need to wish (*cetanā*): “May happiness *karaṇīyaṃ*: ‘pāmojjaṃ me uppañjātū’ti. arises in me.” Happiness (tranquility) arises *Dhammatā esā, bhikkhave, yaṃ avippaṭṭisāriṣṣa naturally in a person free from agitation of the pāmojjaṃ uppañjati. mind.**

“For a person with happiness (tranquility of mind), *Pamuditassa, bhikkhave, na cetanāya there is no need to wish (*cetanā*): “May joy arises in *karaṇīyaṃ*: ‘pīti me uppañjātū’ti. Dhammatā esā, me.” Joy arises in a person with a peaceful mind. *bhikkhave, yaṃ pamuditassa pīti uppañjati.**

“For a joyful person, **there is no need to wish** *Pīṭimanassa, bhikkhave, na cetanāya (*cetanā*): “May I feel lightness in the body.” A *karaṇīyaṃ*: ‘kāyo me passambhatū’ti. joyful person attains bodily lightness *Dhammatā esā, bhikkhave, yaṃ pīṭimanassa (passaddhi). kāyo passambhati.**

“For a person with bodily lightness, **there is no need** *Passaddhakāyassa, bhikkhave, na cetanāya to wish (*cetanā*): “May I experience *sukha*.” A *karaṇīyaṃ*: ‘sukhaṃ vediyāmi’ti. Dhammatā esā, person with bodily lightness experiences *sukha. bhikkhave, yaṃ passaddhakāyo sukhaṃ vediyati.**

“For a person experiencing *sukha*, **there is no** *Sukhino, bhikkhave, na cetanāya karaṇīyaṃ: need to wish (*cetanā*): “May my mind get to ‘cittaṃ me samādhīyatū’ti. Dhammatā esā, samādhī.” Naturally, the mind of a person *bhikkhave, yaṃ sukhino cittaṃ samādhīyati. experiencing sukha gets to samādhī.**

“For a person who gets to *samādhī*, **there is no need** *Samāhitassa, bhikkhave, na cetanāya karaṇīyaṃ: to wish (*cetanā*): “May I know and see the true ‘yathābhūtaṃ jānāmi passāmi’ti. Dhammatā esā,*

nature of things in this world (*yathābhūta ñāna* or *bhikkhave, yaṃ samāhito yathābhūtaṃ jānāti* comprehension of *Tilakkhaṇa*).” A person who gets *passati* to *samādhi* will see the true nature of this world. (Here, it is assumed that one has learned *Tilakkhaṇa* from an *Ariya*; see #3 and #4 below).

“For a person with *yathābhūta ñāna*, there is no *Yathābhūtaṃ, bhikkhave, jānato passato na need to wish (cetanā)*: “May I not be attracted *cetanāya karaṇīyaṃ*: ‘*nibbindāmi*’ti. to temptations in this world (*virāga*).” A person *Dhammatā esā, bhikkhave, yaṃ yathābhūtaṃ who knows and sees things as they are naturally jānaṃ passaṃ nibbindati*. dispassionate towards things in this world.

“For a person who thus naturally dispassionate, there *Nibbinnassa, bhikkhave, na cetanāya karaṇīyaṃ*: is no need to wish (*cetanā*): “May I be free of ‘*virajjāmi*’ti. *Dhammatā esā, bhikkhave, yaṃ* cravings for things in this world.” A person who is *nibbinno virajjati*. dispassionate through understanding the real nature of things will be free of cravings.

“For a person who is free of cravings, there is *Virattassa, bhikkhave, na cetanāya karaṇīyaṃ*: no need to wish (*cetanā*): “May I realize the ‘*vimuttiñāṇadassanaṃ sacchikaromi*’ti. knowledge of the final release from all suffering *Dhammatā esā, bhikkhave, yaṃ viratto vimutti- (vimuttiñāṇadassana)*.” A person who is free of *ñāṇadassanaṃ sacchikaroti*. cravings will attain the final release from all suffering.

“In this way, *bhikkhus*, freedom from cravings *Iti kho, bhikkhave, virāgo vimuttiñāṇadassanat-* (dispassion) has released from all suffering as its *tho vimuttiñāṇadassanānisamsa*, *nibbidā* reward, Disenchantment has dispassion as its *virāgatthā virāgānisamsā, yathābhūtañāṇadas-* reward, *yathābhūta ñāna* has , disenchantment as *sanāṃ nibbidatthāṃ nibbidānisamsāṃ, samādhi* its reward, *samādhi* has *yathābhūta ñāna* as its *yathābhūtañāṇadassanattho yathābhūtañāṇadas-* reward, *sukha* has *samādhi* as its reward, bodily *sanānisamsa*, *sukhaṃ samādhātthāṃ samādhā-* lightness (*passaddhi*) has *sukha* as its reward, joy *nisamsāṃ, passaddhi sukhatthā sukhānisamsā,* has bodily lightness as its reward. A calm mind has *pīti passaddhatthā passaddhānisamsā, pāmojjaṃ* joy as its reward, freedom from an agitated mind has *pītattthāṃ pītānisamsāṃ, avippaṭisāro* a calm mind as its reward, and moral conduct has *pāmojjattho pāmojjānisamsa*, *kusalāni sīlāni* freedom from an agitated mind as its reward. *avippaṭisārattthāni avippaṭisārānisamsāni. Iti* “In this way, dhamma qualities cultivated and fulfilled *kho, bhikkhave, dhammā dhamme abhisandenti,* will lead to more dhamma qualities in the Noble Path *dhammā dhamme paripūrenti apārā pāraṃ* in getting from this shore to the Far shore *gamanāyā*”ti. (*Nibbāna*).”

3. The path to *Nibbāna* is not a straight step-by-step process in a linear fashion. Rather, a given person cycles through the steps repeatedly until the *Arahant phala* moment is attained.

- One starts with mundane *sīla* and can get to the early stages of *samādhi* without hearing about *Tilakkhaṇa*. One cannot proceed beyond that with just *sīla*, which is on shaky grounds, until one comprehends *Tilakkhaṇa*.
- Once one starts comprehending *Tilakkhaṇa* (and becomes a *Sotāpanna/Sotāpanna Anugāmi*), one’s *sīla* (moral conduct) will become unbreakable: It is called *Ariyakānta sīla*.
- That is when one gets into the Noble Eightfold Path.

4. In other words, there are two paths: One starts on the mundane path, and with the comprehension of *Tilakkhaṇa*, one switches to the Noble Path; see, “[Buddha Dhamma – In a Chart.](#)”

- Only a *Sammasambuddha* or a *pacceka Buddha* can figure out (or comprehend) *Tilakkhaṇa* by themselves; all others have to learn *Tilakkhaṇa* from an *Ariya*.

5. Another key thing to note is that there is no mention of the need to attain *jhānā*.

Jhānā are a special kind of *samādhi*. It is good to cultivate *jhānā*, but they are not necessary to attain *magga phala*.

And there are innumerable types of *samādhi*; one gets to *Ariya samādhi* (conducive to attaining *Nibbāna*) with the comprehension of *Tilakkhaṇa*.

6. Key words:

- ***Avippaṭisāra* (විපිලිසර බව (vigilance) in Sinhala [vipilisara bava in Sinhala]):** One's mind is normally agitated. It tends to go everywhere. This is why it is hard for most people to comprehend Dhamma. When one focuses on maintaining moral conduct (*sīla*) and stays away from *dasa akusala*, this agitation of the mind will gradually diminish, and one will be able to concentrate on a given concept for longer. [*Avippaṭisāra* ; [a + vipaṭisāra] absence of regret or remorse]
- ***pāmojja* (සතුට or ප්‍රමොදය (wellness) in Sinhala [satuta or pramodaya in Sinhala]):** Happiness or tranquility of mind is the closest English translation. This is below the “joyful state of mind” or *pīti* (පීතිය in Sinhala [pīti in Sinhala]).
- ***passambhati/passaddha*:** calming down (lightness) of the physical body (කායික සහලලුව [kāyika sahælluva] (physically light)).
- ***nibbindati*:** get weary of, unsatisfied with (කලකිරීම [kalakiriṃa] (disappointment)).
- ***virajjati* (related to *virāga*): absence of cravings. [*virajjati* : [vi + rad + ya] detaches oneself; shows lack of interest in.]**
- ***vimutti*:** becomes free of suffering, final release (විමුක්ති [vimukti] (liberation)).

17.10 Paṭhama Mettā Sutta (AN 4.125)

June 7, 2018; revised June 8, 2018; September 13, 2018; August 30, 2020

1. [WebLink: suttacentral: Pathama Mettā Sutta \(AN 4.125\)](#) clearly states the difference between *jhānā* cultivated by Noble Persons (*Ariyā*) and those who are merely on the mundane path (*assutavā puthujjano*). Here *assutavā puthujjano* means one who has not comprehended *Tilakkhaṇa*; one MUST have removed the ten types of *micchā diṭṭhi* even to cultivate *anāriya jhāna*.

- Since *jhānic* states represent the same *rūpāvacara* realms, the *jhānic* experience could be the same for both *Ariya* and *anāriya jhāna* (I am not sure).
- However, the critical difference is that Noble Persons (who have cultivated *jhāna*) NEVER come back to *kāma loka* and attain *Parinibbāna*, while the *anāriyās* come back to *kāma loka*, and could be born in the *apāyā* too.
- That is because the *Ariyā* have REMOVED *kāma rāga* (*ucceda pahāna*), while *anāriyās* have only SUPPRESSED them (*vikkhambhana pahāna*).

[*pahāna* : ‘overcoming’, abandoning. There are 5 kinds of overcoming:

- (1) overcoming by repression (*vikkhambhana-pahāna*), i.e. the temporary suspension of the 5 hindrances (*nīvarana*, q.v.) during the absorptions,
- (2) overcoming by the opposite (*tadanga-pahāna*),
- (3) overcoming by destruction (*samuccheda-pahāna*),
- (4) overcoming by tranquillization (*patipassaddhi-pahāna*),
- (5) overcoming by escape (*nissarana-pahāna*).

[*nissarana* : [nt.] 1. going out; departure; 2. escape.]

- (1) “Among these, ‘overcoming by repression’ is the pushing back of adverse things, such as the 5 mental hindrances (*nīvarana* q.v.), etc., through this or that mental concentration (*samādhi*, q.v.), just as a pot thrown into moss-clad water pushes the moss aside....
- (2) “ ‘Overcoming by the opposite’ is the overcoming by opposing this or that thing that is to be overcome, by this or that factor of knowledge belonging to insight (*vipassanā* q.v.), just as a lighted lamp dispels the darkness of the night. In this way, the personality-belief (*sakkāyadiṭṭhi*, s. *ditthi*) is overcome by determining the mental and corporeal phenomena ... the view of uncausedness of existence by investigation into the conditions... the idea of eternity by contemplation of impermanency ... the idea of happiness by contemplation of misery....
- (3) “If through the knowledge of the noble path (s. *ariyapuggala*) the fetters and other evil things cannot continue any longer, just like a tree destroyed by lightning, then such an overcoming is called ‘overcoming by destruction’ ” (Vis.M. XXII, 110f).
- (4) When, after the disappearing of the fetters at the entrance into the paths, the fetters, from the moment of fruition (*phala*) onwards, are forever extinct and stilled, such overcoming is called the ‘overcoming by tranquillization’.
- (5) “The ‘overcoming by escape’ is identical with the extinction and Nibbāna” (Pts.M. I. 27). (App.).]

2. The *Brahma Vihāra* in Buddha Dhamma are four types: *mettā* (loving-kindness), *karuṇā* (compassion, the opposite of *karuṇā* is anger), *muditā* (empathetic joy), and *upekkhā* (equanimity towards all beings).

- The four realms correspond to the four highest-intensity *rūpāvacara jhāna* levels (in *sutta* categorization of *jhāna*).
- We can clearly see the concept of *gati*; most translators do not even know what that word means.
- Instead of translating the *sutta* word-by-word, I have just provided the meaning of each verse.

	Pāli	English
1	Cattārome, bhikkhave, puggalā santo saṁvijjamānā lokasmiṁ. Katame cattāro?	Bhikkhus, there are four types of "cooled down" individuals (santo). Which four?
2	<i>Idha, bhikkhave, ekacco puggalo mettāsahagatena cetasā ekaṁ disaṁ pharitvā viharati, tathā dutiyaṁ tathā tatiyaṁ tathā catutthaṁ. Iti uddhamadho tiriyaṁ sabbadhi sabbattatāya sabbāvantarā lokasmiṁ mettāsahagatena cetasā vipulena mahaggatena appamāṇena averena abyāpajjena pharitvā viharati. So tadassādeti, taṁ nikāmeti, tena ca vittiṁ āpajjati.</i>	<i>Bhikkhus, There is an individual who cultivates mettā bhavana in four directions. Thus he keeps pervading above, below, and all around the universe with compassion.</i>
3	<i>Tattha ñhito tadadhimutto tabbahulavihārī aparihīno kālaṁ kurumāno brahmakāyikānaṁ devānaṁ saḥabyataṁ upapajjati. Brahmakāyikānaṁ, bhikkhave, devānaṁ kappo āyuppaṁāṇaṁ. Tattha puthujjano yāvatāyukaṁ ñatvā yāvatakaṁ tesāṁ devānaṁ āyuppaṁāṇaṁ taṁ sabbāṁ khepetvā nirayampi gacchati tiracchānayaṇimpi gacchati pettivisayampi gacchati.</i>	When he dies, he is reborn in the realm Brahmakayika realm. Those <i>devas</i> have a life-span of a eon (<i>kappa</i>). An anāriya person having stayed there, having used up all the life-span of those <i>devas</i> , can be reborn in hell, animal womb, or the state of the hungry ghosts.
4	<i>Bhagavato pana sāvako tattha yāvatāyukaṁ ñatvā yāvatakaṁ tesāṁ devānaṁ āyuppaṁāṇaṁ taṁ sabbāṁ khepetvā tasmīmyeva bhavati parinibbāyati. Ayaṁ kho, bhikkhave, viseso ayaṁ adhippayāso idaṁ nānākaraṇaṁ sutavato ariyasāvakaṁ assutavatā puthujjanaṁ, yadidaṁ gatiyā upapattiyā sati.</i>	But a disciple of the Blessed One (an <i>Ariya</i>), having used up all the life-span of those <i>devas</i> , attains Parinibbāna there. The difference is in the gati between a Noble Person and an <i>anāriya</i> (<i>assutavatā puthujjanaṁ</i>).
5	<i>Puna caparaṁ, bhikkhave, idhekacco puggalo karuṇāsahagatena cetasā ekaṁ disaṁ pharitvā viharati,..(rest of the verse same as that of 2 above).</i>	Again, <i>Bhikkhus</i> , There is an individual who cultivates karuṇa bhāvanā in four directions (rest same as in 2 above).
6	<i>Tattha ñhito tadadhimutto tabbahulavihārī aparihīno kālaṁ kurumāno ābhassarānaṁ devānaṁ saḥabyataṁ upapajjati. Ābhassarānaṁ, bhikkhave, devānaṁ dve kappā āyuppaṁāṇaṁ. Tattha puthujjano yāvatāyukaṁ ñatvā yāvatakaṁ tesāṁ devānaṁ āyuppaṁāṇaṁ taṁ sabbāṁ khepetvā nirayampi gacchati tiracchānayaṇimpi gacchati pettivisayampi gacchati.</i>	When he dies, he is reborn in the <i>Abhassara</i> realm. Those <i>devas</i> have a life-span of 8 eons (<i>Maha Kappa</i>). An anāriya person having stayed there, having used up all the life-span of those <i>devas</i> , can be reborn in hell, animal womb, or the state of the hungry ghosts.
7	<i>Bhagavato pana sāvako tattha yāvatāyukaṁ ñatvā yāvatakaṁ tesāṁ devānaṁ āyuppaṁāṇaṁ taṁ sabbāṁ khepetvā tasmīmyeva bhavati parinibbāyati. Ayaṁ kho, bhikkhave, viseso ayaṁ adhippayāso idaṁ nānākaraṇaṁ sutavato ariyasāvakaṁ assutavatā puthujjanaṁ, yadidaṁ gatiyā upapattiyā sati.</i>	But a disciple of the Blessed One (an <i>Ariya</i>), having used up all the life-span of those <i>devas</i> , attains Parinibbāna there. The difference is in the gati between an the noble ones and an <i>anāriya</i> (<i>assutavatā puthujjanaṁ</i>).

8	<i>Puna caparam, bhikkhave, idhekacco puggalo muditāsahagatena cetasā ekam disam pharitvā viharati,..(rest of the verse same as that of 2 above).</i>	Again, <i>Bhikkhus</i> , There is an individual who cultivates mudita bhāvanā in four directions.
9	<i>Tattha ñhito tadadhimutto tabbahulavihārī aparihīno kālam kurumāno Subhakinha devānam saḥabyataṃ upapajjati. Subhakinha, bhikkhave, devānam cattāro kappā āyupamāṇam. Tattha puthujjano yāvatāyukam ñhatvā yāvatakam tesam devānam āyupamāṇam tam sabbam khepetvā nirayampi gacchati tiracchānayaonimpi gacchati pettivisayampi gacchati.</i>	When he dies, he is reborn in the <i>Subhakinha</i> realm. Those <i>devas</i> have a life-span of 4 eons (<i>kappa</i>). An anāriya person having stayed there, having used up all the life-span of those <i>devas</i> , can be reborn in hell, animal womb, or the state of the hungry ghosts.
10	<i>Bhagavato pana sāvako tattha yāvatāyukam ñhatvā yāvatakam tesam devānam āyupamāṇam tam sabbam khepetvā tasmimyeva bhavē parinibbāyati. Ayam kho, bhikkhave, viseso ayam adhippayāso idam nānākaraṇam sutavato ariyasāvakassa assutavatā puthujjanena, yadidam gatiyā upapattiyā sati.</i>	But a disciple of the Blessed One (an <i>Ariya</i>), having used up all the life-span of those <i>devas</i> , attains Parinibbāna there . The difference is in the gati between an the noble ones and an <i>anāriya</i> (<i>assutavatā puthujjanena</i>).
11	<i>Puna caparam, bhikkhave, idhekacco puggalo upekkhāsahagatena cetasā ekam disam pharitvā viharati,..(rest of the verse same as that of 2 above)</i>	Again, <i>Bhikkhus</i> , There is an individual who cultivates upekkha bhāvanā in four directions.
12	<i>Tattha ñhito tadadhimutto tabbahulavihārī aparihīno kālam kurumāno vehapphalānam devānam saḥabyataṃ upapajjati. Vehapphalānam, bhikkhave, devānam pañca kappasatāni āyupamāṇam. Tattha puthujjano yāvatāyukam ñhatvā yāvatakam tesam devānam āyupamāṇam tam sabbam khepetvā nirayampi gacchati tiracchānayaonimpi gacchati pettivisayampi gacchati.</i>	When he dies, he is reborn in the <i>Vehapphala</i> realm. Those <i>devas</i> have a life-span of 500 eons (<i>kappa</i>). An anāriya person having stayed there, having used up all the life-span of those <i>devas</i> , can be reborn in hell, animal womb, or the state of the hungry ghosts.
13	<i>Bhagavato pana sāvako tattha yāvatāyukam ñhatvā yāvatakam tesam devānam āyupamāṇam tam sabbam khepetvā tasmimyeva bhavē parinibbāyati. Ayam kho, bhikkhave, viseso ayam adhippayāso idam nānākaraṇam sutavato ariyasāvakassa assutavatā puthujjanena, yadidam gatiyā upapattiyā sati.</i>	But a disciple of the Blessed One (an <i>Ariya</i>), having used up all the life-span of those <i>devas</i> , attains Parinibbāna there . The difference is in the gati between an the noble ones and an <i>anāriya</i> (<i>assutavatā puthujjanena</i>).
14	<i>Amam kho, bhikkhave, viseso ayam adhippayāso idam nānākaraṇam sutavato ariyasāvakassa assutavatā puthujjanena, yadidam gatiyā upapattiyā sati. Ime kho, bhikkhave, cattāro puggalā santo samvijjamānā lokasmin”ti.</i>	<i>Bhikkhus</i> , this is the difference in outcomes due to difference in gati between a Noble Person and an <i>anāriya</i> (<i>assutavatā puthujjanena</i>).

Notes:

1. The four *jhānic* states attained by an *Ariya* discussed in this *sutta* are from *anāriya jhāna*. Therefore, they are *jhānic* states attained specifically by a *Sotāpanna*, by SUPPRESSING *kāma rāga*. If a *Sotāpanna* attained even the first *Ariya jhāna*, then he/she would be born not in those four realms, but in the realms reserved for those who attained the *Ānāgāmi phala* (realms #23 through #27; see, “[31 Realms of Existence](#).”)
2. Note that by cultivating *mettā*, *karuṇā*, *muditā*, and *upekkhā bhāvanā*, one is born in *Brahmakāyika*, *Abhassara*, *Subhakinha*, and *Vehappala Brahma* realms with lifetimes of 20000, 40000, 60000, and 84000 *kappā*.
3. For more information on *jhānā*, see “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#)” and “[Power of the Human Mind](#).”
4. Information on 31 realms comes from *suttā* like this one. I have corrected the lifetimes of these four *rūpāvacara* realms in the post, “[31 Realms of Existence](#).”

17.11 **Kukkuravatika Sutta (Majjhima Nikāya 57) – Kammakkhaya**

June 11, 2018; revised April 12, 2020; December 29, 2020; January 7, 2021; January 22, 2021 (#11)

What Is Meant by *Kammakkhaya*?

1. *Kammakkhaya* is a bit difficult concept to understand. [WebLink: *suttacentral: Kukkuravatika Sutta \(Majjhima Nikaya 57\)*](#) explains it briefly and also clarifies how *pāpa* (*kaṇha*) *kamma* and *puñña* (*sukka*) *kamma* lead to bad and good *kamma vipāka* in various realms. *Kusala kamma* (also called *khammakkhayāya kamma* in this sutta) leads to *kammakkhaya* or “effectively nullifying” *kamma vipāka*.

- *Kaṇha* means “dark or black” (Sinhala word is “*kalla*”), and *sukka* is “white or bright” (Sinhala “*sudu*”). The King of Gods is named “*Sakka*” because he is engaged in *sukka* (*puñña*) *kamma*.
- Please read the post, “[Kanha \(Dark\) and Sukka \(Bright\) Kamma and Kammakkhaya](#)” before reading this one, because all these are discussed in detail there. You will not be able to understand this post without reading that.
- **Before discussing *kammakkhaya*, the Buddha also explains how one's *gati* (habits/character) can lead to corresponding future rebirths.**

Kukkuravatika Sutta (MN 57) – Introduction

2. The first half of the *sutta* describes the background, which led the Buddha to analyze various types of *kamma*. We will first go through the essence of the first half, just stating the essence.

- *Suttā* become boring only because the translators basically translate the whole *sutta* word-by-word. There are many repetitive statements in a *sutta* (done for various reasons, the effective oral transmission being one), and it is unnecessary to translate word-by-word.
- Furthermore, it is better to provide the essence of a verse rather than translating word-by-word, which can lead to wrong interpretations in some cases.

3. “*Evam me sutam— ekam samayam bhagavā kolīyesu viharati haliddavasanaṃ nāma kolīyānaṃ nigamo. Atha kho puṇṇo ca kolīyaputto govatiko acelo ca seniyo kukkuravatiko yena bhagavā tenupasaṅkamimsu; upasaṅkamitvā puṇṇo kolīyaputto govatiko bhagavantam abhivādetvā ekamantaṃ nisīdi. Acelo pana seniyo kukkuravatiko bhagavatā saddhiṃ sammodi. Sammodanīyam katham sāraṇīyam vītisāretvā kukkurova palikujjitvā ekamantaṃ nisīdi. Ekamantaṃ nisinno kho puṇṇo kolīyaputto govatiko bhagavantam etadavoca: “ayam, bhante, acelo seniyo kukkuravatiko dukkarakārako chamānikkhittam bhojanam bhuñjati. Tassa tam kukkuravatam dīgharattam samattam samādinnaṃ. Tassa kā gati, ko abhisamparāyo”ti? “Alam, puṇṇa, tiṭṭhatetaṃ; mā maṃ etaṃ pucchī”ti. Dutiyampi kho puṇṇo kolīyaputto govatiko ... pe ... tatiyampi kho puṇṇo kolīyaputto govatiko bhagavantam etadavoca: “ayam, bhante, acelo seniyo kukkuravatiko dukkarakārako chamānikkhittam bhojanam bhuñjati. Tassa tam kukkuravatam dīgharattam samattam samādinnaṃ. Tassa kā gati, ko abhisamparāyo”ti?”*

- **Translated:** “Thus have I heard. On one occasion, the Buddha lived in the Koliyan country where there was a Koliyans’ town named Haliddavasana. Then Puṇṇa, an ascetic **who lived like an ox** (*govatiko*). This was a cult based on the belief that one can attain *Nibbāna* by subjecting the body to harsh living like an ox). He went with Seniya, an ascetic **who lived like a dog** (*kukkuravatiko*). Puṇṇa, the ox-mimicking ascetic, said to the Buddha: “Venerable sir, this Seniya is a naked dog-ascetic who does what is hard to do: he eats his food when it is thrown to the ground; he does everything like a dog. He has been practicing that for a long time. **What will be his rebirth? What will be his future *gati*?**”
- “Enough, Puṇṇa, let that be. Do not ask me that.” But Puṇṇa asked the question three times.

“Dog Gati” Leads to “Dog Births”

4. “Addhā kho te ahaṃ, puṇṇa, na labhāmi. Alaṃ, puṇṇa, tiṭṭhatetaṃ; mā maṃ etaṃ pucchīti; api ca tyāhaṃ byākarissāmi. Idha, puṇṇa, ekacco kukkuravataṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, kukkurasīlaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, kukkuracittaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, kukkurākappaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ. So kukkuravataṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, kukkurasīlaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, kukkuracittaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, kukkurākappaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ kāyassa bhedaṃ paraṃ maraṇā kukkurānaṃ saḥabyataṃ upapajjati. Sace kho paṇassa evaṃdiṭṭhi hoti: ‘imināhaṃ sīlena vā vatena vā tapena vā brahmacariyena vā devo vā bhavissāmi devaṇṇataro vā’ti, sāssa hoti micchādiṭṭhi. Micchādiṭṭhissa kho ahaṃ, puṇṇa, dvinnāṃ gatīnaṃ aṇṇatarāṃ gatīṃ vadāmi—nirayaṃ vā tiracchānayaṇiṃ vā. Iti kho, puṇṇa, sampajjamānaṃ kukkuravataṃ kukkurānaṃ saḥabyataṃ upaneti, vipajjamānaṃ nirayaṃ”ti.

Evaṃ vutte, acelo seniyo kukkuravatiko parodi, assūni pavattesi.”

- **Translated:** Finally, the Buddha answered. “Here, Puṇṇa, if someone lives like a dog, he develops the dog-behavior or dog-habits fully. He develops the dog-mindset fully. If so, at his death, he will be reborn as a dog. **But if he also has a view as this: ‘By this observance of “holy life,” I shall be born a god,’ then he will have a wrong view too.** Now there are two destinations for one with a wrong view: hell or the animal realm. So, Puṇṇa, if his dog-mimicking succeeds, it will lead to birth as a dog. if it fails, it will lead him to birth in hell (*niraya*) due to wrong views.”
- When this was said, Seniya, the naked dog-duty ascetic, cried out and burst into tears.

5. “Atha kho bhagavā puṇṇaṃ koliyaputtaṃ govatikaṃ etadavoca: “etaṃ kho te ahaṃ, puṇṇa, nālatthaṃ. Alaṃ, puṇṇa, tiṭṭhatetaṃ; mā maṃ etaṃ pucchī”ti. “Nāhaṃ, bhante, etaṃ rodāmi yaṃ maṃ bhagavā evamāha; api ca me idaṃ, bhante, kukkuravataṃ dīgharattaṃ samattaṃ samādinnaṃ. Ayaṃ, bhante, puṇṇo koliyaputto govatiko. Tassa taṃ govataṃ dīgharattaṃ samattaṃ samādinnaṃ. Tassa kā gati, ko abhisamparāyo”ti? “Alaṃ, seniya, tiṭṭhatetaṃ; mā maṃ etaṃ pucchī”ti. Dutiyampi kho acelo seniyo ... pe ... tatiyampi kho acelo seniyo kukkuravatiko bhagavantaṃ etadavoca: “ayaṃ, bhante, puṇṇo koliyaputto govatiko. Tassa taṃ govataṃ dīgharattaṃ samattaṃ samādinnaṃ. Tassa kā gati, ko abhisamparāyo”ti?”

- **Translated:** Then the Blessed One told Puṇṇa: “Puṇṇa, I could not persuade you when I said: ‘Enough, Puṇṇa, let that be. Do not ask me that.’” Then Seniya the naked-dog ascetic said: “Venerable sir, I am not crying because the Blessed One has said this about me, but because I have wasted my time practicing this foolish method. Venerable sir, this Puṇṇa is an ox-ascetic. He has long taken up and practiced living like an ox. **What will be his birth? What will be his future gati?**” “Enough, Seniya, let that be. Do not ask me that.” A second time and a third-time Seniya asked the same question.

Gati of an Ox Leads to Birth of an Ox

6. “Addhā kho te ahaṃ, seniya, na labhāmi. Alaṃ, seniya, tiṭṭhatetaṃ; mā maṃ etaṃ pucchīti; api ca tyāhaṃ byākarissāmi. Idha, seniya, ekacco govataṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, gosīlaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, gocittaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ, gavākappaṃ bhāveti paripuṇṇaṃ abbokiṇṇaṃ. So govataṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, gosīlaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, gocittaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ, gavākappaṃ bhāvetvā paripuṇṇaṃ abbokiṇṇaṃ kāyassa bhedaṃ paraṃ maraṇā gunnaṃ saḥabyataṃ upapajjati. Sace kho paṇassa evaṃdiṭṭhi hoti: ‘imināhaṃ sīlena vā vatena vā tapena vā brahmacariyena vā devo vā bhavissāmi devaṇṇataro vā’ti, sāssa hoti micchādiṭṭhi. Micchādiṭṭhissa kho ahaṃ, seniya, dvinnāṃ gatīnaṃ aṇṇatarāṃ gatīṃ vadāmi—nirayaṃ vā tiracchānayaṇiṃ vā. Iti kho, seniya, sampajjamānaṃ govataṃ gunnaṃ saḥabyataṃ upaneti, vipajjamānaṃ nirayaṃ”ti. Evaṃ vutte, puṇṇo koliyaputto govatiko parodi, assūni pavattesi.”

- **Translated:** Finally, the Buddha answered. “Here, Seniya, someone develops the ox-behavior or ox-habits fully. He develops the mindset of an ox. If so, at his death, he will be reborn as an ox. **But if he also has a view as this: ‘By this observance of “holy life,” I shall be born a god,’ then he will have a wrong view too. Now there are two destinations for one with wrong views:** hell or the animal realm. So, Seniya, if his ox-mimicking succeeds, it will lead to birth as an ox. If it fails, it will lead him to birth in hell (*niraya*) due to wrong views.”
- When this was said, Puṇṇa, the ox-duty ascetic, cried out and burst into tears.

7. “*Atha kho bhagavā acelaṃ seniyaṃ kukkuravatikaṃ etadavoca: “etaṃ kho te ahaṃ, seniya, nālattham. Alaṃ, seniya, tiṭṭhatetaṃ; mā maṃ etaṃ pucchi”ti. “Nāhaṃ, Bhante, etaṃ rodāmi yaṃ maṃ bhagavā evamāha; api ca me idaṃ, Bhante, govataṃ dīgharattaṃ samattaṃ samādinnaṃ. Evaṃ pasanno ahaṃ, Bhante, Bhagavati; pahoti bhagavā tathā dhammaṃ desetum yathā ahaṃ cevimaṃ govataṃ pajaheyyaṃ, ayañceva acelo seniyo kukkuravatiko taṃ kukkuravataṃ pajaheyyā”ti. “Tena hi, puṇṇa, suṇāhi, sādhukaṃ manasi karohi, bhāsissāmī”ti. “Evaṃ, Bhante”ti kho puṇṇo koliyaputto govatiko bhagavato paccassosi. Bhagavā etadavoca: “*

- **Translated:** “Then the Blessed One told Seniya the naked dog-duty ascetic: “Seniya, I could not persuade you when I said: ‘Enough, Seniya, let that be. Do not ask me that.’”
- Then Puṇṇa said, “Venerable sir, I am not crying because the Blessed One has said this about me, but because I have wasted my time practicing this foolish *sīla*. Venerable sir, I have confidence in the Blessed One; thus, ‘The Blessed One is capable of teaching us the Dhamma the right way.’”
- “Then, Puṇṇa, listen and attend closely to what I shall say.”—“Yes, venerable sir,” he replied. The Blessed One said this:

Four Types of *Kamma*

8. “*Cattārimāni, puṇṇa, kammāni mayā sayāṃ abhiññā sacchikatvā paveditāni. Katamāni cattāri? Atthi, puṇṇa, kammaṃ kaṇhaṃ kaṇhavipākāṃ; atthi, puṇṇa, kammaṃ sukkaṃ sukkavipākāṃ; atthi, puṇṇa, kammaṃ kaṇhasukkaṃ kaṇhasukkavipākāṃ; atthi, puṇṇa, kammaṃ akaṇhaṃ asukkaṃ akaṇhaasukkavipākāṃ, kammakkhayāya saṃvattati.*”

- **Translated:** “Puṇṇa, there are four kinds of actions (*kamma*) proclaimed by me after realizing them for myself. What are the four? There is dark action (*kaṇha* or *pāpa kamma*) with a dark result. A bright action (*sukka* or *puñña kamma*) brings a bright result. A dark-and-bright action (*kaṇhasukkaṃ*) brings a dark-and-bright result (*kaṇhasukkavipākāṃ*.) Then there is an action that is neither dark nor bright with the neither-dark-nor-bright result, an **action that leads to the destruction of defilements (*kammakkhayāya* or *kusala kamma*)**.”

“Dark” *Kamma* With “Dark” Results

9. “*Katamañca, puṇṇa, kammaṃ kaṇhaṃ kaṇhavipākāṃ? Idha, puṇṇa, ekacco sabyābajjhaṃ kāyasaṅkhāraṃ abhisaṅkharoti, sabyābajjhaṃ vacīsaṅkhāraṃ abhisaṅkharoti, sabyābajjhaṃ manosaṅkhāraṃ abhisaṅkharoti. So sabyābajjhaṃ kāyasaṅkhāraṃ abhisaṅkharitvā, sabyābajjhaṃ vacīsaṅkhāraṃ abhisaṅkharitvā, sabyābajjhaṃ manosaṅkhāraṃ abhisaṅkharitvā, sabyābajjhaṃ lokāṃ upapajjati. Tamevaṃ sabyābajjhaṃ lokāṃ upapannaṃ samānaṃ sabyābajjhā phassā phusanti. So sabyābajjhehi phassehi phuṭṭho samāno sabyābajjhaṃ vedanaṃ vedeti ekanta dukkhaṃ, seyyathāpi sattā nerayikā. Iti kho, puṇṇa, bhūtā bhūtassa upapatti hoti; yaṃ karoti tena upapajjati, upapannameva phassā phusanti. Evampāhaṃ, puṇṇa, ‘kammadāyādā sattā’ti vadāmi. Idaṃ vuccati, puṇṇa, kammaṃ kaṇhaṃ kaṇhavipākāṃ. (1)”*

- **Translated:** “And what, Puṇṇa, is dark action with dark result? Here someone generates a suffering (*sabyābajjhaṃ* or **destined to or bound by *dukkha***) *kāyasaṅkhāra*, a *dukkhita vacīsaṅkhāra*, a *dukkhita manosaṅkhāra*. Having generated such *dukkhita abhisaṅkhara*, he is reborn in an *apāya*. When he is reborn in an *apāya*, he contacts appropriate *dukkhita* (painful) sensory contacts. Being

touched by such painful contacts, he feels painful feelings, exclusively painful, as in the case of the beings in **hell (niraya)**. Thus a being's rebirth is due to a being's own actions. One's rebirth is through the actions one has performed. Thus I say beings are the heirs of their actions. This is called dark action with dark result."

“Bright” Kamma With “Bright” Results

10. “*Katamañca, puñña, kammaṃ sukkaṃ sukkavipākaṃ? Idha, puñña, ekacco abyābajjhaṃ kāyasaṅkhāraṃ abhisāṅkharoti, abyābajjhaṃ vacīsaṅkhāraṃ abhisāṅkharoti, abyābajjhaṃ manosaṅkhāraṃ abhisāṅkharoti. So abyābajjhaṃ kāyasaṅkhāraṃ abhisāṅkharitvā, abyābajjhaṃ vacīsaṅkhāraṃ abhisāṅkharitvā, abyābajjhaṃ manosaṅkhāraṃ abhisāṅkharitvā abyābajjhaṃ lokaṃ upapajjati. Tamevaṃ abyābajjhaṃ lokaṃ upapannaṃ samānaṃ abyābajjhā phassā phusanti. So abyābajjhehi phassehi phutṭho samāno abyābajjhaṃ vedanaṃ vedeti ekantasukhaṃ, seyyathāpi devā subhakiṇhā. Iti kho, puñña, bhūtā bhūtassa upapatti hoti; yaṃ karoti tena upapajjati, upapannamevaṃ phassā phusanti. Evampāhaṃ, puñña, ‘kammadāyādā sattā’ti vadāmi. Idam vuccati, puñña, kammaṃ sukkaṃ sukkavipākaṃ. (2)’*”

- **Translated:** “And what, Puñña, is bright action with bright result? Here someone generates a **pleasant life (abyābajjhaṃ or destined to or bound by sukha)** kāyasaṅkhāra, a **sukkhita vacīsaṅkhāra**, a **sukkhita manosaṅkhāra**. Having generated such **sukkhita abhisāṅkhara**, he is reborn in a realm with happiness (**sukkhita**). When he is reborn in such a realm, he contacts appropriate **sukkhita** sense contacts. Being touched by such **sukkhita** contacts, he feels **sukha** feelings, as in the case of **subhakinha deva** realm. Thus a being's rebirth is due to a being's own actions. **One gets a rebirth through the actions one has performed**. Thus, I say beings are the heirs of their actions. This is called bright action with bright result”

“Dark and Bright” Kamma With “Dark and Bright” Results

11. “*Katamañca, puñña, kammaṃ kaṇhasukkaṃ kaṇhasukkavipākaṃ? Idha, puñña, ekacco sabyābajjhampi abyābajjhampi kāyasaṅkhāraṃ abhisāṅkharoti, sabyābajjhampi abyābajjhampi vacīsaṅkhāraṃ abhisāṅkharoti, sabyābajjhampi abyābajjhampi manosaṅkhāraṃ abhisāṅkharoti. So sabyābajjhampi abyābajjhampi kāyasaṅkhāraṃ abhisāṅkharitvā, sabyābajjhampi abyābajjhampi vacīsaṅkhāraṃ abhisāṅkharitvā, sabyābajjhampi abyābajjhampi manosaṅkhāraṃ abhisāṅkharitvā sabyābajjhampi abyābajjhampi lokaṃ upapajjati. Tamevaṃ sabyābajjhampi abyābajjhampi lokaṃ upapannaṃ samānaṃ sabyābajjhāpi abyābajjhāpi phassā phusanti. So sabyābajjhehi phassehi phutṭho samāno sabyābajjhampi abyābajjhampi vedanaṃ vedeti vokiṇṇasukhadukkaṃ, seyyathāpi manussā ekacce ca devā ekacce ca vinipātikā. Iti kho, puñña, bhūtā bhūtassa upapatti hoti; yaṃ karoti tena upapajjati. Upapannamevaṃ phassā phusanti. Evampāhaṃ, puñña, ‘kammadāyādā sattā’ti vadāmi. Idam vuccati, puñña, kammaṃ kaṇhasukkaṃ kaṇhasukkavipākaṃ. (3)’*”

- **Translated:** “And what, Puñña, is dark-and-bright action with a dark-and-bright result? Here someone generates **abhisāṅkhara** of both types. Then he is reborn in a realm with both happiness (**sukkhita**) and suffering (**dukkhita**). When he is reborn in such a realm, he contacts appropriate **sukkhita** and **dukkhita** sensory contacts. Being touched by such contacts, he feels **sukha** and **dukha** feelings interchangeably, as in **human, deva, and vinipātika (apāya)** realms. Thus a being's rebirth is due to a being's own actions. One gets a rebirth through the actions one has performed. Thus I say beings are the heirs of their actions. This is called dark-and-bright action with a dark-and-bright result”. [**vinipātika** : (adj.) [fr. vinipāta] destined to suffer in purgatory, liable to punishment after death.]

Neither Dark nor Bright Kamma

12. “*Katamañca, puñña, kammaṃ akaṇhaṃ asukkaṃ akaṇhaasukkavipākaṃ, kammakkhayāya saṃvattati? Tatra, puñña, yamidaṃ kammaṃ kaṇhaṃ kaṇhavipākaṃ tassa pahānāya yā cetanā,*

yamidaṃ kammaṃ sukkam sukkavipākam tassa pahānāya yā cetanā, yamidaṃkammaṃ kaṇhasukkam kaṇhasukhavipākam tassa pahānāya yā cetanā—idaṃ vuccati, puṇṇa, kammaṃ akaṇham asukkam akaṇhaasukhavipākam, kammakkhayāya saṁvattatīti. Imāni kho, puṇṇa, cattāri kammāni mayā sayam abhiññā sacchikatvā paveditāni”ti. (4)”

- **Translated:** “And what, Puṇṇa, is an action that is neither dark nor bright with the neither-dark-nor-bright result, action that leads to the **destruction of defilements (and āsava/anusaya)**? Such volitions (*cetana*) abandon actions that are dark or bright with dark-or-bright results. Such an action (*kamma*) is neither dark nor bright with a neither-dark-nor-bright result. Therefore, such actions lead to the destruction of **defilements (and asava/anusaya)**. **They do not lead to rebirth in any realm.**
- These are the four kinds of *kamma* proclaimed by me after realizing them for myself with direct knowledge.”

13. It is important to realize that such *cetana* AUTOMATICALLY arises in those who have realized the “unsatisfactory and dangerous nature” of this world of 31 realms, i.e., *Tilakkhaṇa*.

- In that context, it is also important to understand that *cetana* is NOT conventional “intention,” but is how good and bad mental factors (*cetasika*) AUTOMATICALLY arise in one’s thoughts based on one’s *gati*.
- The above two points are the most important teachings from the *sutta*. This is explained in detail in the post, “[Kanha \(Dark\) and Sukka \(Bright\) Kamma and Kammakkhaya](#).”
- One also needs to understand that *cetana* is just a single mental factor. The “intention” comes from the incorporation of good or bad *cetasika*. **The *cetana cetasika* just incorporates relevant *cetasika* based on one’s *gati*.** See #9 of “[Kamma, Saṅkhāra, and Abhisāṅkhāra – What Is “Intention”?](#)”

Puṇṇa and Seniya Understood

14. “*Evam vutte, puṇṇo koliyaputto govatiko bhagavantam etadavoca: “abhikkantaṃ, bhante, abhikkantaṃ, bhante. Seyyathāpi, bhante ... pe ... upāsakam maṃ bhagavā dhāretu ajjatagge pāṇupetaṃ saraṇam gatan”ti. Acelo pana seniyo kukkuravatiko bhagavantam etadavoca: “abhikkantaṃ, bhante, abhikkantaṃ, bhante. Seyyathāpi, bhante ... pe ... pakāsito. Esāham, bhante, bhagavantam saraṇam gacchāmi dhammañca bhikkhusaṅghañca. Labheyyāham, bhante, bhagavato santike pabbajjam, labheyyam upasampadan”ti. “Yo kho, seniya, aññatitthiyapubbo imasmim dhammavinaye ākaṅkhati pabbajjam, ākaṅkhati upasampadam so cattāro māse parivasati. Catunnam māsānam accayena āradhdhacittā bhikkhū pabbājenti, upasampādentī bhikkhubhāvāya. Api ca mettha puggalavemattatā veditā”ti.*”

- **Translated:** When this was said, Puṇṇa said to the Blessed One. “Magnificent, venerable sir! The Blessed One has made the Dhamma clear in many ways...From today let the Blessed One accept me as a lay follower who has gone to him for refuge for life.”
- Seniya said to the Blessed One. “Magnificent, venerable sir! The Blessed One has made the Dhamma clear in many ways, as though an upside-down vessel was turned to the upside, revealing what was hidden, or showing the way to one who was lost or holding up a lamp in the dark for those with eyesight to see. I take refuge in the Blessed One, the Dhamma, and the Saṅgha. May I receive the going forth under the Blessed One?”
- “Seniya, one who formerly belonged to another sect and desired the going forth and the full admission in this Buddha Sasana lives on probation for four months. At the end of four months, if the *bhikkhus* are satisfied with him, they give him the going forth and the full admission to the *bhikkhus*’ state. But I recognize individual differences in this matter.”

Seniya became an *Arahant*

15. “Sace, bhante, aññatitthiyapubbā imasmiṃ dhammavinaye ākaṅkhaṇṭā pabbajjāṃ ākaṅkhaṇṭā upasampadam te cattāro māse parivasanti catunnaṃ māsānaṃ accayena āraddhacittā bhikkhū pabbājenti upasampādentī bhikkhubhāvāya, ahaṃ cattāri vassāni parivasissāmi catunnaṃ vassānaṃ accayena āraddhacittā bhikkhū pabbājentu, upasampādentu bhikkhubhāvāya”ti.

Alattha kho acelo seniyo kukkuravatiko bhagavato santike pabbajjāṃ, alattha upasampadam. Acirūpasampanno kho panāyasmā seniyo eko vūpakaṭṭho appamatto ātāpī pahitto viharanto nacirasseva—yassatthāya kulaputtā sammadeva agārasmā anagāriyaṃ pabbajanti, Tadanuttaraṃ—brahmacariyapariyosānaṃ diṭṭheva dhamme sayāṃ abhiññā sacchikatvā upasampajja vihāsi.

“Khīṇā jāti, vusitaṃ brahmacariyaṃ, kataṃ karaṇīyaṃ, nāparaṃ itthattāyā”ti abbhaññāsi. Aññataro kho panāyasmā seniyo arahataṃ ahoṣīti.”

- **Translated:** “Venerable sir, if those who formerly belonged to another sect and desire the going forth and the full admission in this Dhamma and Discipline live on probation for four months, and if at the end of the four months the *bhikkhus* being satisfied with them to give them the going forth and the full admission to the *bhikkhus*’ state, then I will INSTEAD live on probation for four years. At the end of the four years, if the *bhikkhus* are satisfied with me, let them give me the going forth and the full admission to the *bhikkhus*’ state.”
- (Clarification of the terms: **Probation** means what is called **Sāmaṇera**; the *bhikkhu* would wear the robes but has not yet been given **full admission or Upasampadā**. Seniya was saying he was willing to spend **four years in probation**.)
- Then Seniya, the naked dog-ascetic, received the going forth under the Blessed One, and he received the full admission. And soon, not long after his full admission, dwelling alone, withdrawn, diligent, ardent, and resolute, the venerable Seniya became an *Arahant*.

16. The post, “[Kanha \(Dark\) and Sukka \(Bright\) Kamma and Kammakkhaya](#),” provides a simpler explanation of the key terms.

- Discussion of both posts at: “[WebLink: Kusala/Akusala and Puñña/Pāpa Kamma](#).”

17.12 **Buddhism and Evolution – Aggañña Sutta (DN 27)**

January 24, 2019; revised January 30, 2019; July 30, 2019; February 16, 2020; August 24, 2020 (#5 – #7); May 12, 2021; July 22, 2022

Introduction

1. *Aggañña Sutta* is one of several complex *suttā* that requires a lengthy explanation. One must have a broad background in Buddha Dhamma to understand the *sutta*. I have been very reluctant to write even this post because it could lead to many questions in many people who do not yet have that background.

- “*Agga*” means “highest,” and thus, the word “*Aggañña*” means “highest knowledge,” in this case, about our world.
- The Buddha delivered the *Aggañña sutta* to two *brahmins* (Vāsetṭha and Bhāradvāja), to explain the “human origins.” That not only *Vedic Brahmins* – but ALL LIVING BEINGS – on this Earth came from *Brahma* realms at the beginning of the Earth. In other words, each living being on this Earth was a *Brahma* at the beginning of the present Earth).
- I must forewarn that some features contradict existing “scientific theories.” Please do not bring them up. I am aware of them. That is why I have been reluctant to write this post.
- However, at least for those who have faith in Dhamma, there are some benefits in seeing how self-consistent Buddha Dhamma is.

Summary of *Sutta*

2. Following is a summary:

- (i). The universe has no traceable beginning, just like for life; see “[Origin of Life](#).”
- (ii). The universe has “clusters or groups” of stars. Our Solar system is one of 10,000 “star systems” (*cakkavāla* or planetary systems; *chakrawāta* in Sinhala). There is an infinite number of such *cakkavāla* in the universe.
- (iii). When a star in the vicinity of our Sun blows up in a few billion years, that blast will destroy 10,000 other star systems in the neighborhood. In modern science, such a “star explosion” has a particular name, a supernova.
- (iv). Such a cluster of 10,000 world systems blows up from time to time in the universe. Again, scientists observe such supernovae every year.
- (v). Science does not know yet that those destroyed star systems re-form over billions of years.
- (vi). Not all 31 realms get destroyed when our Solar system blows up at the end of a *mahā kappa*. Higher lying *Brahma* worlds (where there is very little “destructible matter”) survive. That is where all living beings on this Earth end up before the destruction of the Earth.
- (vii). How all living beings end up in the *Brahma* realms is a long story.
- (viii). Then when the Earth re-forms, those *Brahmā* — at the end of their lifetimes in those worlds — are reborn as humans with very light, *Brahma*-like bodies at first.
- (ix). Then the life on Earth evolves to other lifeforms too. That is a “reverse evolution” compared to the “theory of evolution” currently accepted by science. After billions of years, the realms below the *Ābhassara Brahma* realm will be destroyed again to be re-formed after billions of more years. That cycle will keep repeating.
- (x). So, that is the life cycle. It happens all over the universe at any given time. Scientists observe several supernovae in our galaxy yearly (billions of *cakkavāla*).

Model of the Universe

3. Therefore, life exists in an infinite number of “star systems” where a star provides the energy to sustain life. In our “Solar system,” life exists in 31 realms centered on Earth, located inside, on the surface, and extending out into space. Of course, the Sun is our star.

- In the post “[31 Realms of Existence](#),” these 31 realms are listed. The information there comes from several *suttā*. In particular, the “[Dhammacakkappavattana Sutta](#)” names many of those spheres. Most versions of the *sutta* skip that section. The following pdf file contains the *sutta*’s full text: [WebLink: PDF Download: Dhammacakkappavattana Sutta-3](#).

4. A Buddha appears only in one *cakkavāla* out of that cluster of 10,000 such *cakkavāla* in that group; that is our Earth. *Brahmā* and *devas* from those 10,000 systems (*dasa saḥassi lokadhātu*) can come and listen to Dhamma on the Earth.

- Of course, humans from those worlds do not have access to Buddha Dhamma.
- So, we can see how rare it is for humans to “have access” to Buddha Dhamma. Sometimes there can be many consecutive *mahā kappā* without a single Buddha appearing!

Model of the Solar System (*Cakkavāla*)

5. The Buddha stated that the length of one *kappa* or *kalpa* in Sinhala) unimaginably long. He gave the following comparison. In that time, a man could wear away a mountain of solid granite one *yojanā* (about 7 miles) around and one *yojanā* high by stroking it once every hundred years with a silk cloth.

- The [WebLink: suttacentral: Pabbata Sutta \(SN 15.5\)](#) has the above analogy; “[Sāṃsāric Time Scale, Buddhist Cosmology, and the Big Bang Theory](#).”

6. A *mahā kappa* consists of 4 “*antakkappa*,” as explained in the [WebLink: suttacentral: Kappa Sutta \(AN 4.156\)](#):

“*Cattārimāni, bhikkhave, kappāsa asaṅkhyeyyāni. Katamāni cattāri? Yadā, bhikkhave, kappo saṃvaṭṭati,...kappo saṃvaṭṭo tiṭṭhati,...kappo vivaṭṭati,...kappo vivaṭṭo tiṭṭhati, ..*”

- “There are four incalculable *kappā*. **Destruction** takes place for a *kappa*, **remains in that state (void)** for a *kappa*, **re-formation** takes place over a *kappa*, and then it **exists in that state** for a *kappa*.”
- **That last stage is where the Earth is now.**
- Each incalculable *kappa* has **20 *kappā***.

7. The Solar system will last another 5 billion or so. Thus the total time in the existence of the current Sun (and Earth) is about 10 billion years, according to modern science. That is the **existence phase** lasting 20 *kappā*, assuming that the current scientific estimate is correct.

- The other three *kappā* take 10 billion years each, which is how the time for a complete cycle takes 40 billion years.
- The Earth (and the whole Solar system) continues through this cyclic process that takes roughly 40 billion years per cycle, i.e., for a *mahā kappa* (with the above assumption.)
- This cycle will keep repeating. There was no “Big Bang” beginning.

Migration of Living Beings at Destruction/Re-Formation of Earth

8. When the Sun dies in the future, it will start expanding and expand to reach the Earth. Long before that, all life on Earth would have been destroyed (except those in higher *Brahma* realms.)

- So, what happens to all the living beings on Earth? We remember that while humans and animals live on the Earth, those belonging to the other three lower realms live on or underneath the Earth’s surface. All those will perish.

- It is a long story, but all those beings move to higher realms as the Earth gets hot.

9. We remember that the *deva* and *Brahma* realms lie above the Earth. But the “density” in those realms is well below the “density” of things at the surface. As we know, *deva* bodies are much less dense than human bodies, and *Brahma* “bodies” are even more subtle.

- One critical thing we learn from science is that “more dense stuff” burns first. For example, in an incinerator, we can burn anything dense. But of course, gases are not burned (i.e., not decomposed.)
- There is nothing much of what we call “material” in those realms. Whatever is there will gradually decay and be replaced by other “fine matter.” Of course, all beings in those realms will also have long but finite lifetimes.
- The deduction is that all those realms above the *Ābhassara Brahma* realm will not destroy in the destruction phase. That is why the lifetimes of some *Brahmā* are many *mahā kappā*.

10. The bottom line is that all realms below the *Ābhassara Brahma* realm will eventually be destroyed. By that time, all the living beings would have “migrated” up to that realm.

- How do all these living beings, including those in the *apāyā*, migrate to higher realms?
- That is related to the fact that when the Earth starts getting “hot,” those “mind pleasing sense objects” will be destroyed over time. Living beings will have fewer “sense attractions,” and thus, their minds will be temporarily freed from “*upādāna*.”
- That needs a detailed explanation, but those who understand *Paṭicca Samuppāda* may be able to at least a glimpse of how it happens.

11. When the Earth is re-formed about 20 billion years after its destruction (10 billion years remaining in the destructed state and 10 billion years for the re-formation,) those *Brahmā* will start coming down to those newly-formed lower realms.

- That also will take some explaining. But the critical point is that with time, old “*gati*” (which have been lying dormant as *anusaya*) start to re-surface, and the activation of *Paṭicca Samuppāda* cycles will ensure those “downward paths.”

Conflicts with Current Scientific Theories

12. Now, we immediately run into difficulties with the **current scientific knowledge** of Earth’s history. According to current understanding, the first humans appeared only about 2 million years ago. Note that a billion years is 1000 million years!

- Therefore, what we described above is a “reverse evolution” compared to the “theory of evolution” currently accepted by science.
- We need to go back only 500 years to see how a prevailing world view changed and became compatible with Buddha Dhamma. See #13 below.
- I have discussed how Buddha Dhamma has so far withstood past such “contradictions”; see “[Dhamma and Science – Introduction](#).” I hope the next revision in science will happen during my lifetime.

13. For example, only 500 years ago, the accepted “world view” was that Earth was at the center of the universe with all the stars embedded in “[WebLink: wikipedia.org: celestial spheres](http://web.archive.org/web/20110606121609/http://wikipedia.org:celestial%20spheres).”

- If someone had tried to explain that the Earth was rotating around the Sun, he would have had a hard time. Galileo spent the rest of his life in solitary confinement after proving that the Earth was rotating around the Sun.
- Of course, no one will be prosecuted for proposing any theory these days. Still, they will not be taken seriously by the scientific community.

- As new experiments/observations provide further evidence, an accepted scientific view changes to accommodate the new evidence. For example, the above change in the world view occurred after Galileo invented the telescope.
- Of course, adopting scientific method for mundane purposes is only rational. That is the only way science can make progress.
- However, when one comprehends Buddha's Dhamma, one can better understand our world.

The Rarity of Buddha Dhamma in the World

14. There have been four Buddhas in this *mahā kappa*, and one more Buddha will appear before the destruction of this Earth and the Solar system.

- Then after 30 billion more years, the Earth will come to exist again in this cyclic process (not the same Earth).

15. In the [WebLink: suttacentral: Vepullapabbatta Sutta \(SN 15.20\)](#), the Buddha provides the names of the three Buddhas **on this Earth** (in this *mahā kappa*) before him: Kakusandha, Koṇāgama, and Kassapa. He describes how a particular mountain had three different names and heights during those Buddha's times.

- The point here is that those Buddhas had been on this Earth at times far apart from each other. Considering that the age of the Earth is about 4.5 billion years, it is reasonable to assume that they were about a billion years apart.
- One piece of evidence in the *Tipiṭaka* for material from previous Buddhas transmitted via *Vedic* teachings (with superficial meanings) is given in the post, "[Arogyā Paramā Lābhā..](#)" (see #8 there).

16. By the way, the existence of Buddha Kassapa before the Buddha Gotama helps explain many questions about the connection between *Vedic* terms and Buddhist terms. Some examples are kamma (*karma*), *Bhikkhu* (*Bhikshu*), *paññā* (*pragnā*), *jhāna* (*dhyāna*), *Nibbāna* (*Nirvāna*), and so on.

- After the end of the Kassapa Buddha *Sāsana*, his teachings were transmitted as *Vedic* teachings without deeper meanings. I will need to write some posts just on this issue.
- A good example is the *Ānāpāna bhāvanā*, which got transmitted as "breath meditation."
- After re-gaining Buddha Kassapa's interpretation during our Buddha's time, the *Vedic* description has been retaken hold by the current time. The correct version will be fully restored in the coming years. But, of course, it will again disappear to be rediscovered by the Maitreya Buddha in the future.

17. Furthermore, there have been only 7 Buddhas within the past 91 *mahā kappā*; see, "[WebLink: suttacentral: Mahāpadāna Sutta \(DN 14\)](#)."

- There have been 30 *mahā kappā* without a single Buddha before the current *mahā kappa*. That is 1200 billion years or over a trillion years!
- Even in this *mahā kappa*, the Gotama Buddha *Sāsana* would last only 5000 years, a negligible time compared to a *mahā kappa*. **That is why we should not waste this rare opportunity.**

Origins of the World – Limits of Inquiry

18. The human mind is naturally curious. We want to know everything, especially regarding this wondrous place called the universe. It is mind-boggling but exciting at the same time. , Growing up, I spent a lot of time reading science fiction and speculations about the origins of the universe, etc.

- One time, Ven. Moggallāna, who was only second to the Buddha in psychic (*abhiññā*) powers, wanted to explore the universe and see for himself how far he could go. He got lost! Buddha had to come to his rescue.

- Then there is the account about a *yogi*, Rohitassa, who developed *abhiññā* powers. He wanted to see the end of the world and took off looking for it, got lost, and died. He was reborn as a *deva*, came to see the Buddha, and told the Buddha about his quest. See, “[WebLink: accesstoinsight.org: Rohitassa Sutta: To Rohitassa](http://www.accesstoinsight.org/suttas/majjhima/sutta/rohitassa.html).”

19. Cosmology is one of the things that the Buddha declared “unthinkable (*acinteyya*)” for an average human; see, “[WebLink: suttacentral: Acinteyya Sutta \(AN 4.77\)](http://www.suttacentral.net/an/4/77)”:

“There are these four things that one should not conjecture about and would bring **anxiety and madness** to anyone who speculates. Which four? (i) capabilities of a Buddha, (ii) subject of *jhānā*, (iii) detailed knowledge of *kamma/kamma vipāka*, and (iv) origins of the world.

- One can spend a lifetime looking into the details of those subjects, and getting no where.
- However, we can gain some insights by having a rough idea about those subjects as we saw above. One gets into trouble when one tries to get into details.
- We will explore some more aspects in the future that are beneficial for progressing on the Path.

20. Please keep that in mind when you comment on the discussion forum. We can learn a few things from the *sutta*, but it is useless to get into arguments about how **it contradicts current scientific findings**.

- I have opened a new topic, “Post on “[WebLink: puredhamma.net/forums: Buddhism and Evolution – Aggañña Sutta \(DN 27\)](http://www.puredhamma.net/forums/buddhism-and-evolution-aggañña-sutta-dn-27)” for comments and questions at the discussion forum.
- Also, please read the post carefully before commenting or asking a question. There is a lot of material there.

July 12, 2019: I have started a new subsection, “[Origin of Life](#),” to discuss the necessary background material for future posts on the *Aggañña Sutta*.

17.13 Tapussa Sutta (AN 9.41) – Akuppā Cetovimutti

February 28, 2019; #21 added March 1, 2019; July 19, 2022

1. Most *suttā* have been translated word by word without paying attention to the context or the underlying teachings. I hope this *sutta* translation will convey what I mean by that statement.

- This *sutta* explains why it is necessary to reduce cravings for sense pleasures and to stay away from *dasa akusala* — and eventually to get rid of them — if one wants to cultivate *Ariya jhāna*.
- **Just suppressing** sense cravings (*kāma rāga*) induces *jhāna* too; see “[Jhānic Experience in Detail – Sāmaññaphala Sutta \(DN 2\)](#).”
- However, to attain *Nibbāna (akuppā cetovimutti)*, one needs to remove those cravings at each *jhānic* state; see, “[Ascendancy to Nibbāna via Jhāna \(Dhyāna\)](#).” In this post, we discuss the step-by-step process.
- Still, **getting rid** of sense cravings (*kāma rāga*) is not an easy task. It needs to be done by contemplating the drawbacks (and dangers) of them — called *ādīnava* (pronounced “aadeenava”) — and also the benefits (*ānisamsa*) of giving up such cravings (renunciation); see “[Mundane versus Supramundane Jhāna](#).”

2. One could follow the Pāli version while reading: “[WebLink: suttacentral: Tapussa Sutta \(AN 9.41\)](#)” a “[WebLink: suttacentral: English Translation](#),” and “[WebLink: suttacentral: Sinhala Translation](#)” at that same website. It is a useful website, but translations are not correct for some key Pāli words, and *suttā* are translated word-by-word without paying attention to the embedded teachings. That is the case for basically all current English translations.

- *Suttā* are designed to be extremely repetitive, enabling faithful oral transmission over the first 500 years. But, **in the written form**, it is unnecessary to translate the whole *sutta* word-by-word to understand its message. That could be very boring reading.
- So, I will start with a lengthy translation and cut it short as I proceed to the end to make it readable yet (hopefully) provide the key ideas.
- We also need to remember that before becoming the Buddha, the *Bodhisatta* had learned how to get to all the *jhānā* from other *yogis*. One can attain *cetovimutti* (highest *jhāna*) by such *anāriya* techniques as breath meditation, but those *jhānā* are not stable. As described below, the Buddha figured out to cultivate unbreakable (stable) *jhāna* and attained the *Buddhahood* with *akuppā cetovimutti*.
- That is the process described in this *sutta*, which we discuss now.

3. Thus, I have heard. On one occasion, the Blessed One was staying in Malla near a Mallan town named Uruvelakappa. Then early in the morning, the Blessed One, having put on his robes and carrying his bowl and outer robe, went to Uruvelakappa for alms. Having gone into Uruvelakappa for alms, after his meal, on his return from his alms round, he said to Ven. Ānanda, “Stay here, Ānanda, while I go to the forest to rest.”

- “As you say, lord,” Ven. Ānanda replied.
- Then the Blessed One went to the forest and sat down at the root of a tree to rest.

4. Then Tapussa, the householder went to Ven. Ānanda and, having bowed down to him, sat to one side on arrival. As he was sitting there, he said to Ven. Ānanda: “Venerable Ānanda, we are householders who indulge in sensuality, delight in sensual pleasures, enjoy sensual pleasures, rejoice in sensual pleasures. For us, staying away from sensual pleasures — or renunciation — seems like jumping off a cliff (it is hard to contemplate). Yet I’ve heard that in this Buddha *Sāsana*, there are young *bhikkhus* (monks) who have given up sense pleasures and have attained peace of mind and ultimate release from suffering. How are those *bhikkhus* different from most people like us?”

- “This is true, householder. Let’s ask the Blessed One to explain this”.

5. Then Ven. Ānanda, with Tapussa, went to the Blessed One and, on arrival, having bowed down to him, sat to one side. Then Ven. Ānanda said to the Blessed One: “*Bhante*, Tapussa the householder, here, has said to me, ‘we are householders who indulge in sensuality, delight in sensual pleasures, enjoy sensual pleasures, rejoice in sensual pleasures. **For us, staying away from sensual pleasures — or renunciation — seems as unappealing as jumping off of a cliff.** Yet I’ve heard that in this Buddha *Sāsana*, there are young monks who have given up sense pleasures and have attained peace of mind and ultimate release from suffering. How are these monks different from most people like us?”

6. “So it is, Ānanda. So it is. Even before attaining the Buddhahood, when I was still an unawakened *Bodhisatta*, I thought: ‘abstaining from sensual pleasures (*nekkhamma*) is good, peace of mind (*viveka*) is good’. But such thoughts free of sense cravings (*nekkhamme cittam*) would not sink in (*na pakkhandati*), would not purify (*na pasidati*), would not calm down (*na santitthati*) my mind, and it would not become liberated (*na vimuccati*)”.

- Then a thought occurred to me: “What is the reason that such thoughts free of sense cravings (*nekkhamme cittam*) would not sink in (*na pakkhandati*), would not purify (*na pasidati*), calm down, would not calm down (*na santitthati*) my mind so that it would not become liberated (*na vimuccati*)?”
- Then this thought occurred to me: “**I have not seen the dangers/drawbacks (*ādinava*) of sensual pleasures; I have not contemplated the dangers/drawbacks of sensual pleasures at depth (*abahulikato*). I have not understood the rewards of renunciation (*nekkhamme ānisamsa*). I have not contemplated at depth (*anāseviṭa*) the rewards of renunciation. That’s why my mind would not become liberated (*na vimuccati*).**”
- Then this thought occurred to me: “If I see the dangers of sensual pleasures and the benefits of renunciation of sense pleasures, such thoughts free of sense cravings (*nekkhamme cittam*) will sink in (*pakkhandati*), will purify (*pasidati*), will calm down (*santitthati*) my mind so that it will become liberated (*vimuccati*)”.

My comment: One needs to pay attention to the Buddha describing to Tapussa how he had thought about the above thought process. But, he figured out exactly how to do that only on the night of attaining the *Buddhahood*:

7. “**At a later time — *aparena samyena* — (the night of attaining the *Buddhahood*)**, having seen the drawback of sensual pleasures, I pursued that theme; I contemplated on the drawbacks of sense pleasures, and understood the rewards of renunciation, and **understood the solution of getting rid of cravings (*āsāvās*)**. Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.

- The above paragraph describes what happened on the night of the Enlightenment when he finally realized *āsavakkhaya ñāna*, how to remove *āsāvās* by contemplating on *Tilakkhaṇa*; see, “[The Way to Nibbāna – Removal of Asavas](#).”
- As we know, he went through six years of various types of suffering to discover *āsavakkhaya ñāna*.
- **Now we get back to the difficulties faced by the *Bodhisatta* in the intervening six years in trying to make the first *jhāna* unbreakable or stable.**

8. “Withdrawn from sensuality (*vivicca kāmehi*), withdrawn from immoral (*vivicca akusala dhammehi*), I entered and remained in the vicinity of the **first *jhāna*** with rapture and pleasure born from that restfulness (*vivekajam*), **accompanied by *savitakka/savicara* (*nekkhamma/avihimsa* thoughts).**”

- “However, **I was still beset with recurring perceptions of sensuality (*kāmasahagatā saññāmanasikārā samudācaranti*)**. That was a suffering for me. Just as pain arises as an affliction for a healthy person, even so, those recurring sensual thoughts were an affliction for me”.

(Note that the *Bodhisatta* experienced this problem early when he learned how to get to *jhānā* from his early *anāriya* teachers: Alara Kalama and Uddaka Ramaputta. He developed the

pathway during those intervening six years but successfully implemented it only on the night of Enlightenment via *āsavakkhaya ñāṇa*).

9. “At a later time (the night of attaining the *Buddhahood*), having seen the drawback of *vitakka*, I pursued that theme; I contemplated on the drawbacks of *vitakka* and understood the rewards of *avītakka* when I understood the benefits of getting rid of cravings (*āsāvās*). Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.

- Now we get back to the difficulties faced by the *Bodhisatta* with the second *jhāna* before the night of the Enlightenment.

10. “Then I thought: ‘I should get to the *samādhi*-generated (*samādhijam*) the **second *jhāna*** that is free of these thoughts burdened with (*vitakka/vicāra*)’”. Here it is important to realize that *vitakka* means to have the mind set on defiled thought object and *vicāra* means to keep it there.

- “However, in the **second *jhāna***, such thoughts free of *vitakka* (i.e., *avītakka*) would not sink in, would not purify, calm down, would not calm down my mind so that it would not become liberated (*avītakke cittaṃ na pakkhandati nappasīdati na santiṭṭhati na vimuccati*)”.
- Then this thought occurred to me: “I have not seen the dangers/drawbacks (*ādinava*) of *vitakka*; I have not contemplated the dangers/drawbacks of *vitakka* at depth (*abāhulikato*). I have not understood the rewards of *avītakka* (*avītakke ānisaṃsa*). I have not contemplated in depth (*anāseviṭa*) the rewards of *avītakka*. That’s why my mind would not become liberated (*na vimuccati*)”.
- “At a later time (the night of attaining the *Buddhahood*), I was able to enter and stay in the vicinity of the **second *jhāna*** that was devoid of such defiled thoughts (*vitakka*) and with *pīti* and *sukha*.”

11. This is a recurring theme for the rest of the *sutta*. The difficulty encountered at each *jhāna* level starting from the next verse, and the solution found on the night of Enlightenment.

- I will skip a few repeating steps here, for the third and fourth *jhāna*.

12. I could enter and stay in the vicinity of the **third *jhāna*** devoid of *pīti* but with *sukha*.

- However, even then the perception of *pīti* kept arising in me (*pītiṣahagata sannamanasikara samudacaranti*). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so, those recurring *pīti* was an affliction for me.
- “At a later time (the night of attaining the *Buddhahood*), verse is skipped here.

13. I could enter and stay in the vicinity of the **fourth *jhāna*** devoid of *sukha* but with *upekkhā*.

- However, even then the perception of *upekkhā sukha* kept arising in me (*upekkhasukhasahagata sannamanasikara samudacaranti*). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so, those recurring *upekkhā sukha* was an affliction for me.
- “At a later time (the night of attaining the *Buddhahood*), the verse is skipped here.
- Now we get to the *arūpāvacara jhāna*, and the steps are the same.

14. I was able to enter and stay in the vicinity of *ākāsānañcāyatana* by thinking, “Infinite space,” and transcending of perceptions of *rūpa*, with the disappearance of perceptions of *paṭigha*, and not heeding various *ārammaṇa* (*‘yannūnāhaṃ sabbaso rūpasaññānaṃ samatikkamā paṭighasaññānaṃ atthaṅgamā nānattasaññānaṃ amanasikārā’*).

- However, even in the vicinity of *ākāsānañcāyatana*, perceptions of *rūpa* kept arising in me, and that was an affliction for me (*..iminā vihārena viharato rūpasahagatā saññāmanasikārā samudācaranti. Svassa me hoti ābādhō*).

15. “At a later time (the night of attaining the *Buddhahood*), having seen the drawback of forms (*rūpa*), I pursued that theme; I contemplated the drawbacks of *rūpa*, and understood the rewards of

ākāsānañcāyatana, when I understood the benefits of getting rid of cravings (*āsāvās*). Then my mind firmly held such a mindset, calmed down, and was released from such sensual thoughts.

16. I was able to enter what I thought was *viññāṇaṇcāyatana*, the infinitude of consciousness.

- “As I remained there, I was beset with attention to perceptions dealing with the dimension of the infinitude of space (*ākāsānañcāyatana* *sahagatā saññāmanasikārā samudācaranti*). That was an affliction for me. Just as pain arises as an affliction for a healthy person, even so the attention to perceptions dealing with the dimension of the infinitude of space that beset me was an affliction for me.

17. So at a later time, having seen the drawback of the dimension of the infinitude of space (*ākāsānañcāyatana*), I pursued that theme; having understood the reward of the dimension of the infinitude of consciousness (*viññāṇaṇcāyatana*), I familiarized myself with it. My heart leaped up at the dimension of the infinitude of consciousness and grew confident, steadfast, and firm, seeing it as peace. With the complete transcending of the dimension of the infinitude of space, [perceiving,] ‘Infinite consciousness,’ I entered and remained in the dimension of the infinitude of consciousness.

- The *sutta* goes through the rest of the *arūpāvacara jhāna*. At each stage, the Buddha on the night of Enlightenment, REMOVE each *jhāna* factor, not just bypass it as in *anāriya jhāna*.
- **This was done by contemplating the *anicca, dukkha, and anatta* nature of each *jhānic* state.**

18. “So at a later time, having seen the drawback of the **dimension of neither perception nor non-perception** (*nevasaññānāsaññāyatana*), I pursued that theme; ... With the complete transcending of the dimension of neither perception nor non-perception, I entered and remained in the **cessation of perception and feeling** (*saññāvedayitanirodha*). **And as I saw with discernment, the mental fermentations (*āsavā*) were totally eliminated.**

- It is important to note that *saññāvedayita nirodha* cannot be attained via *anāriya jhāna*. This is *Nibbāna* experienced by a living *Arahant*.

19. “Ānanda, **as long as I had not attained and emerged from these nine step-by-step dwelling-attainments in forward and backward order in this way, I did not claim to have attained the *Buddhahood*** that is supreme in the cosmos with its *Devās*, *Mārās*, and *Brahmā*, with its contemplatives and *brāhmins*, with its royalty and common people.

- But as soon as I had attained and emerged from these nine step-by-step dwelling-attainments in forward and backward order in this way, then I did claim to have directly awakened to the right self-awakening supreme state in the cosmos with its *Devās*, *Mārās*, and *Brahmā*, with its contemplatives and *brāhmins*, its royalty and common people. Knowledge and vision arose in me: ‘My release is unshakable (*akuppā me cetovimutti*), **This is the last birth and no more rebirths (*ayamantimā jātī, natthi dāni punabbhavo*”’ti).**

20. That is the step-by-step process of getting to the “total detachment” from the 31 realms of this world via successive *Ariya jhānic* states. That ultimate release of the mind attained this way is called ***akuppā cetovimutti***.

- Of course, one can get to the same ultimate state (*Arahanthood*) without going through *jhāna*, and that is called ***paññāvimutti***; see, “***Pannāvimutti – Arahanthood without Jhāna***.”
- It is also clear that a *paññāvimutti* *Arahant* cannot get to the *saññāvedayita nirodha* state during his/her lifetime.

21. The efforts by the *Bodhisatta* to figure out how to remove *āsavā* (including *kāma rāga*) — mainly by inflicting many bodily sufferings — for six years, are described in detail in the following two *suttā*: “***WebLink: suttacentral: Bodhirājakumāra Sutta (MN 85)***” and “***WebLink: suttacentral: Mahāsaccaka Sutta (MN 36)***.”

17.14 Yamaka Sutta (SN 22.85) – Arahant hood Is Not Annihilation but End of Suffering

May 23, 2019; revised March 20, 2020; August 29, 2022

Introduction

The Pāli version of the *Yamaka Sutta* can be found at: “[WebLink: suttacentral: Yamaka Sutta \(SN 22.85\).](#)” This is an important *sutta* that clearly explains what *Nibbāna* is and what the Buddha’s description of a living being is. It makes it clear that a “living being” exists “in this world” only as long as its craving for the five aggregates exists (which is inevitably accompanied by a lot of suffering). There is no “real person” that exists to be annihilated.

- On one occasion the Venerable Sāriputta was dwelling at Sāvatti in Jetavanārāma built by Anathapiṇḍika. At that time the following wrong view had arisen in a *bhikkhu* named Yamaka. “As I understand, **a *bhikkhu* who attains the Arahant hood would not exist after death and thus would be annihilated.**”
- Several *bhikkhus* heard that such a wrong view had arisen in *bhikkhu* Yamaka. They approached the Venerable Yamaka and exchanged greetings with him, after which they sat down to one side and said to him: “Is it true, friend Yamaka, that such a view as this has arisen in you: ‘As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavā* are destroyed would not exist after death and thus would be annihilated?’”
- “Exactly so, friends. As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavā* are destroyed would not exist after death and thus would be annihilated.”
- “Friend Yamaka, do not speak thus. Do not misrepresent the Blessed One. It is not good to misrepresent the Blessed One. The Blessed One would not speak thus: ‘A *bhikkhu* whose *āsavā* are destroyed would not exist after death and thus would be annihilated.’”

2. Although other *bhikkhus* admonished him this way, *Bhikkhu* Yamaka still held on to that wrong view and declared: “As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavā* are destroyed is annihilated and does not exist after death.”

- Since those *bhikkhus* could not detach the Venerable Yamaka from that wrong view, they approached Venerable Sāriputta. They told him all that occurred, adding: “It would be good if the Venerable Sāriputta would approach *bhikkhu* Yamaka and explain to him out of compassion for him.” Venerable Sāriputta consented by silence.

Analysis by Ven. Sāriputta -1

3. Then, in the evening, the Venerable Sāriputta emerged from seclusion. He approached the Venerable Yamaka and exchanged greetings with him, after which he sat down to one side and said to him: “Is it true, friend Yamaka, that such a wrong view as this has arisen in you: ‘As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavā* are destroyed is annihilated and does not exist after death?’”

“Exactly so, friend.”

- “What do you think, friend Yamaka, is a **form (*rūpa*)** *nicca* or *anicca* (can or cannot be maintained as one likes)?” — “*anicca*, friend.”... “If something is *anicca* does it lead to *sukha* or *dukha*? — “It leads to *dukha*, friend.”

“If something is of *anicca, viparināma* nature, it cannot be maintained as one likes and is subjected to unexpected changes. Would it be appropriate to take that to be me, to be mine, or my *attā* (“self” is the translation used in English)?” — “That is not appropriate, friend”.

- “What do you think, friend Yamaka, is *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa* – are they *nicca* or *anicca*?”—“*anicca*, friend.”...“If something is *anicca* does it lead to *sukha* or *dukha*?”— “*dukha*, friend”.

“If something is of *anicca*, *viparināma* nature, is it appropriate to take that to be me, to be mine, or my *attā*?” – “No, friend”.

(My comment: Thus, it is clear that it does not make sense to take any or all five ENTITIES of *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa* as me, as mine, or my *attā*.)

Analysis by Ven. Sāriputta -2

4. Now Ven. Sāriputta goes one step further.

- “Whatever kind of form there is, Yamaka, whether past, future, or present, internal or external, gross or subtle, inferior or superior, far or near. This is the form aggregate (*rūpakkhandha*). It is inappropriate to take any of those as “me, to be mine, or my *attā*.” The same is true for the other four aggregates”.
- “When one comprehends this Yamaka, one will not take any of those five aggregates as “me, to be mine, or my *attā*.” Then one will be liberated”.
- “What do you think, friend Yamaka, do you regard the body (part of *rūpakkhandha*) as a living being?”—“No, friend.”—“Do you regard *vedanā*, *saññā*, *saṅkhāra*, or *viññāṇa* as a living being?”—“No, friend.”

(My comment: Thus, it is clear that it does not make sense to take any or all five AGGREGATES of *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa* as me, as mine, or my *attā*.)

Analysis by Ven. Sāriputta -3

5. Now Ven. Sāriputta goes one step further.

- “What do you think, friend Yamaka, do you regard a living being as in its body?”—“No, friend.”—“Do you regard a living being as apart from its body?”—“No, friend.”—“Do you regard a living being as in its *vedanā*? As apart from its *vedanā*? In *saññā*? As apart from *saññā*? In its *saṅkhāra*? As apart from *saṅkhāra*? In its *viññāṇa*? As apart from its *viññāṇa*?”—“No, friend.”
- “What do you think, friend Yamaka, do you regard *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa*, taken together, as a living being?”—“No, friend.”
- “What do you think, friend Yamaka, do you regard a living being as one who is without *rūpa*, without *vedanā*, without *saññā*, without *saṅkhāra*, without *viññāṇa*?”—“No, friend.”
- “But, friend, when a living being is not understood by you to be real and actual here in this very life, is it appropriate for you to declare: ‘As I understand the Dhamma taught by the Blessed One, a *bhikkhu* whose *āsavās* are destroyed is annihilated and does not exist after death?’”
- “Formerly, friend Sāriputta, when I was ignorant, I did hold that wrong view, but now that I have heard this Dhamma teaching of the Venerable Sāriputta I have abandoned that wrong view and have made the breakthrough to the Dhamma.”

My Comments

6. The following are My comments:

1. This is the main point of the whole *sutta*. It is impossible to talk about the destruction or annihilation of a “person” or a “living being” that does not truly exist.

2. We conventionally talk about a person, but in reality, there is no such “person”, just a collection of five aggregates that keeps CHANGING at every moment according to *Paṭicca Samuppāda*; see, “[Paticca Samuppāda – Overview](#)”).
3. This incessant continuation of the five aggregates hopping from one realm to another among the 31 realms can be called a “lifestream”. The Buddha said he could not see a beginning of such a lifestream. We all have existed from a beginning that cannot be traced back. We have suffered so much in the four lower realms during most of that time. We could say that the death of an *Arahant* is the end of that “lifestream” (and end of suffering!); see, “[What Reincarnates? – Concept of a Lifestream](#)”).

Analysis by Ven. Sariputta -4

7. Now, Ven. Sariputta wants to make sure that Ven. Yamaka has fully understood.

- “Suppose, friend Yamaka, they were to ask you the following: ‘Friend Yamaka, when a *bhikkhu* is an *Arahant*, one whose *āsavās* are destroyed, what happens to him with the breakup of the body, after death?’—being asked thus, what would you answer?”
- “If they were to ask me this, friend, I would answer thus: ‘Friends, the form is of *anicca* nature; anything of *anicca* nature leads to suffering and passing away. In the same way, *vedanā*, *saññā*, *saṅkhāra*, and *viññāṇa* are all of *anicca* nature; anything of *anicca* nature leads to suffering and passing away. I would answer that way”.
- “*Sādhū Sādhū*, friend Yamaka!”

Summary

8. There is more in the *sutta*. But the main point is in the above section.

This is why the Buddha rejected both extremes of the existence of an existing “self” or denial of existence.

- At every moment there is an existence, complete with *vedanā* (suffering/pleasures); those *vedanā* arise momentarily and pass away. But there is no *attā* or a “self” that is unchanging.
- But the problem is that those *vedanā* are real, and for the most part are *dukkha vedanā*, not *sukha vedanā*, in the long run in the rebirth process.
- To stop any *dukkha vedanā* from arising, one MUST terminate the continuation of the arising of the five aggregates, i.e., the rebirth process. It is not possible to have *sukha vedanā* AND to be free of *dukkha vedanā* anywhere in the 31 realms.
- Arising of the five aggregates is inevitable as long as *avijjā* is present. As long as *avijjā* is there, the *Paṭicca Samuppāda* process continues (and leads to suffering.) Removal of *avijjā* happens at the *Arahant* stage with optimization of *paññā* (wisdom.)
- For an *Arahant* with that optimized *paññā*, this vision becomes crystal clear. Thus he/she would not grasp (*upādāna*) a new *bhava* at the *cuti-paṭisandhi* moment. That is how this incessant continuation of a lifestream comes to an end. It is not an annihilation of a “person”; it is the end of suffering!

9. The moment-to-moment change of the five aggregates happens automatically (based on one’s *gati*), via “[Paticca Samuppāda During a Lifetime](#)” process.

- This is why it is important to learn Buddha Dhamma, get rid of “bad *gati*,” and cultivate “good *gati*”: “[9. Key to Ānāpānasati – How to Change Habits and Character \(Gati\)](#).” Then one’s five aggregates will automatically evolve in the direction of *Nibbāna*.
- That is the same as following the Eightfold Path: *Sammā Diṭṭhi*, *Sammā Saṅkappa*, ...*Sammā Samādhi*.

17.15 Three Types of “Bodies” – Poṭṭhapāda Sutta (DN 9)

July 16, 2022

Living beings in the 31 realms generally possess one of “three types of bodies” (*kāya*), as the Buddha pointed out in the *Poṭṭhapāda Sutta* (DN 9.)

Atta versus Attapaṭilābha

1. During the time of the Buddha, many believed in a “soul-like entity” (*ātma/ātman* in Hinduism) associated with any person. Once a Brahmin named Poṭṭhapāda had a lengthy conversation with the Buddha about different kinds of living beings in this world.

- The Buddha explained to him that, in general, there are three types of living beings categorized as having different “*attapaṭilābha*.” Still, none would have anything like a permanent “*attā*” or “an essence” that is indestructible. That discussion is in the “[WebLink: suttacentral: Poṭṭhapāda Sutta \(DN 9\)](#).”
- Buddha’s explanation is in section 2.2. *Tayoattapaṭilābha*. We will only focus on that in this post.
- Note that the English translation in the link of “*Tayoattapaṭilābha*” is “Three Kinds of Reincarnation.” The word “reincarnation” may indicate “something like an *attā* that keeps coming back.” Thus, a better translation is “Three Kinds of Rebirth.”

Three Kinds of Rebirth – Tayoattapaṭilābha

2. Section 2.2. *Tayoattapaṭilābha* starts with the Buddha saying: “*Tayo kho me, poṭṭhapāda, attapaṭilābhā—oḷāriko attapaṭilābho, manomayo attapaṭilābho, arūpo attapaṭilābho.*” *Tayo* means “three.”

Then the Buddha briefly explained each category.

- (i) ***oḷārika attapaṭilābha***: *Rūpī cātumahābhūtiko kabaḷīkārāhārabhakkho.*
- (ii) ***manomaya attapaṭilābha***: *Rūpī manomayo sabbaṅgapaccaṅgī ahīnindriyo.*
- (iii) ***arūpa attapaṭilābha***: *Arūpī saññāmayo.*

3. The three types of “*attapaṭilābha*” are the possible rebirths with a **solid body**, a **mind-made subtle body**, and an “***arūpa body***.”

- A **solid, heavy physical body** like those of ours or animals belongs to the first category. Such a physical body arises due to the food we eat (*kabaḷīkāra āhāra*.) Such food, when broken down, is made of the four great elements (*mahā bhūta* or *pathavi, āpo, tejo, and vāyo*.) Most living beings in the *kāma loka* have such dense bodies. *Devā* in the six *Deva* realms also have this body type but are less dense than ours.
- A **mind-made subtle body** has only the essential, *kammically* (i.e., mind-generated or *manomayo*) subtle *rūpa*, i.e., *hadaya vatthu* and a set of *pasāda rūpa*. Since this “collection” can take the shape of a figure, it is *Rūpī*. All *rūpāvacara Brahmas* (in the 16 *rūpāvacara Brahma* realms) have this body type.
- An ***arūpa body*** has only one *suddhaṭṭhaka*, the smallest element in Buddha Dhamma (much smaller than an atom in modern science.) Thus it cannot take the “shape of a figure” and, therefore, “*arūpa*.” It shouldn’t even be called a “body” in the sense of a “collection.” But, of course, it is the “seat of the mind” and thus can generate *saññā, vedanā*, etc., i.e., *citta*. Hence the description, “*Arūpī saññāmayo*.” All *arūpāvacara Brahmas* in the four *arūpāvacara Brahma* realms have such “bodies.”

Mind-Made Subtle Body Inside the First Category

4. The solid, heavy bodies of the first kind cannot arise without mind-made subtle bodies as the “seeds.” Furthermore, sensing the external world takes place in the “subtle bodies” made of the *hadaya vatthu* and a set of *pasāda rūpa*.

- As we have discussed, human/animal existences (i.e., *attapaṭilābha*) start with a *rūpi manomaya kāya* at the *paṭisandhi* moment. That is the birth of a (human or animal) *gandhabba*. That *gandhabba* is pulled into a womb to merge with a zygote that will grow into a heavy physical body. See “[Buddhist Explanations of Conception, Abortion, and Contraception](#).”
- A human/animal can experience taste, smell, and touch only when born with such a physical body. Still, those “sensors” or “*hadaya vatthu/pasāda rūpa*” are in the *gandhabba*.
- Thus within a human or animal existence, transitions between *manomaya attapaṭilābha* and *oḷārika attapaṭilābha* take place many times. That ends with the ending of the *manomaya attapaṭilābha* with the demise of the *gandhabba*.

NDE – Temporary Transition to the *Gandhabba* State

5. Near-Death Experiences (NDE) provide concrete evidence for the process discussed in #4 above.

- There have been many accounts of NDE in recent years. Physicians have also started keeping records of such cases. A collection of such studies is in the book “Consciousness Beyond Life” by Pim van Lommel (2010.)
- The *manomaya kāya* of the *gandhabba* overlaps the dense physical body and “energizes it.” The six critical elements of *hadaya vatthu* and five *pasāda rūpa* of a *gandhabba* overlap the physical heart. That is why the *gandhabba* comes out of the physical body during some heart operations.
- That can also happen in critically-injured people who almost die. The *gandhabba* comes out of the physical body, as in the case of the death of the physical body. However, even after being declared dead, the *gandhabba* may “go back in,” and the patient recovers “miraculously.”
- We have discussed such cases in “[Out-of-Body Experience \(OBE\) and Manomaya Kāya](#).”

Descriptions of the “*Gandhabba* World” as “Heaven”

6. Thus, most NDE accounts are by those who had “close encounters with death.” They were either terminally ill or undergoing heart surgeries.

- It is an indescribable relief to come out of a physical body filled with such suffering. Any physical pain one may have been experiencing would be gone instantly. No wonder many think they just visited a heavenly world! But they temporarily visited the “*para loka*” of *gandhabbā*.
- The same human temporarily visited the “*para loka*” of *gandhabbā*. It is not a transition to a *Deva* realm or any other realm!
- Some people report meeting previously-died close relatives or friends during NDE experiences. That is a possibility. Those deceased relatives may be still waiting for a suitable womb to be pulled into (of course, they would not know that.)
- Therefore, SUBJECTIVE experiences described by many NDE subjects need to be “taken with a grain of salt” or skepticism. **However, some OBJECTIVE experiences are undeniable.**

Concrete Facts from NDE Accounts

7. In almost all cases, it is clear that the person’s physical body was unresponsive and even declared dead by the physicians.

- Yet, many provide solid evidence that they “saw” the heart operation or the emergency procedures taken by the physicians and nurses. They could see with their mind-made subtle body, i.e., *gandhabba kāya*.

Thus, the first objective fact verified is the following. The physical body with a brain is NOT where vision takes place. "Seeing" takes place in *hadaya vatthu*, with the aid of the *cakkhu pasāda rūpa*.

- The second point is that they could travel at incredible speeds while in their *gandhabba kāya*. They could go through walls, ceilings, etc. As mentioned in #3 above, *hadaya vatthu* and *pasāda rūpa* are much smaller than an atom in modern science. Going through solid objects is not a problem!
- The following NDE experience provides those two critical pieces of evidence WITHOUT being contaminated by subjective experiences.

Woman Born-Blind Sees for the First Time

8. Sometimes, people are born with the *cakkhu pasāda rūpa*, but the optic nerve (or the physical eye itself) may be damaged. Thus, images of the external world do not reach the brain. As we know, the brain must process those visuals and transmit them to the *gandhabba* inside the physical body for it to be able to see.

- Therefore, those people are blind only because their *cakkhu pasāda rūpa* is not getting a signal from the brain. But if the *gandhabba* can come out of the body, it can see directly. (Note that some others may be born without the *cakkhu pasāda rūpa*; they will never be able to see.)
- The following videos illustrate this situation and verify the discussion in #7.

[WebLink: youtube: Near Death Experience - Blind woman 'sees' while out of body](#)

[WebLink: youtube: What has happened to blind people who have a near-death experience?](#)

Miscellaneous

9. All five sensory faculties of a human are in the *gandhabba* or the *manomaya kāya*. During the time when a *gandhabba* "resides" in a physical body, the brain first processes those signals, and then those signals arrive at the corresponding *pasāda rūpa*. Each *pasāda rūpa* transfers the signal to the *hadaya vatthu*, and it is the *hadaya vatthu* that really "sees," "hears," etc. See, for example, "[How Do We See? – Role of the Gandhabba.](#)"

- Not all who die will end up in the "*para loka*" of *gandhabbā*. Those who have depleted the *kammic* energy sustaining the human *bhava* will be reborn in another realm.
- Anyone ignorant enough to still call *gandhabba* an "*anatarābhava* state" should read "[Antarābhava Discussion in Kathāvatthu – Not Relevant to Gandhabba.](#)"

XVII Myths or Realities?

I

April 29, 2016; revised August 28, 2022

1. In this section, I plan to address some **concepts and practices** in Buddha Dhamma that appear to be myths and/or contradictions to many. Some are indeed myths, but some are not. And sometimes, it depends on the interpretation. There are two aspects to some of these **practices**.

- It is hard for people from various religions to understand why Buddhists respect *Bodhi* trees or *pagodas* (*chetiya*) which look like pyramids with different shapes.
- On the other hand, even many Buddhists who worship them do not know why they are doing it.
- Some practices are outright myths, like the belief that one can attain *Nibbāna* by doing breath meditation. There is no basis for that. How can one remove defilements (greed, hate, ignorance) by concentrating on the breath?
- However, some of them can be shown to be **verifiable and inter-consistent fundamentals of nature: realities or verities**.

2. Then there are other **concepts** like a *Bodhisattava* getting “*niyata vivarana*,” or confirmation from another Buddha that he WILL become a Buddha at such a time. How does that tally with the concept that one can change one’s future drastically by even a single act and that *kamma* is not deterministic?

3. The value and strength of Buddha Dhamma come from its unshakable foundational concepts (axioms) and inter-consistency. Nothing is inconsistent in the practices or concepts in true and pure Buddha Dhamma.

- But it requires some background material to be able to discuss some of these issues. Buddha Dhamma cannot be assessed with conventional thinking. One needs to comprehend the basics of Buddha Dhamma first.
- The more one understands the basic premises, the easier it will become for one to sort out myths from realities.
- After two years of posting essays on key concepts, we are at a stage to start discussing some of these issues. With time, we will have enough background to cover more of these issues.

18.1 Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude

April 29, 2016; December 1, 2017

1. The conventional interpretation of *Animisa Locana Bodhi Poojā* (here “*locana*” is pronounced “*lochana*”) is that Buddha paid his gratitude to the sacred *Bodhi* tree that gave him shade when he attained Enlightenment (Buddhahood). In current literature, it is described as the Buddha spending the second week after attaining Enlightenment — looking at that *Bodhi* tree even without blinking — as an act of gratitude for sheltering him during that Noble effort.

- It is true that the *Bodhi* tree was (and still is) a special tree, and has many unique properties which we will discuss in a future post.
- But there is no basis to the interpretation that he was looking at the *Bodhi* tree without even blinking. There the word “*animisa*” is incorrectly translated as “unblinking”. **What he did during that week was related to his acts of gratitude that were to follow.**

2. *Nimisa* or *nimesa* is a moment, and *animisa* is “without pausing for even a moment”. “*Lo*” is for the “*lokaya*” or “world”, “*ca*” is for the *citta* (thoughts), and thus “*locana*” is basically contemplation, in this case about his long path to the Buddhahood (*bodhi* is the “path to Enlightenment”, thus the name 37 *Bodhipakshika Dhamma*, where “*pākshika*” means “relevant to” or “associated with”. The current English translation is 37 Factors of Enlightenment, which is not too far off).

- What the Buddha did during that *Animisa Locana Bodhi Poojā* (for 7 days) was to trace back to the time that he started fulfilling the requirement for the Buddhahood (*pāramitā*), i.e., scanned the memory records (*nama gotta*) of his previous lives to see who helped him during that whole time.
- Records of our past remain intact basically forever; see, “[Namagotta, Bhava, Kamma Bīja, and Mano Thalaya \(Mind Plane\)](#)” and “[Recent Evidence for Unbroken Memory Records \(HSAM\)](#).”
- After leaving the site of the *Bodhi* tree, he spent the first several years (and even at later times) locating those who helped him during that whole time and helped them attain *Nibbāna*. We will discuss some cases below.

3. It is said that it took the Buddha (or rather the *Bodhisattva*) a “*sāra asenkkheyya kappā lakhayak*” to fulfilled the requirements (*pāramitā*) to attain the Buddhahood. See, “[Difference between a Wish and a Determination \(Paramita\)](#)” for a simple explanation of *paramita*.

There are four *asenkkheyya kappas* in a *mahā kappā*, and “*lakhayak*” is 100,000. But human beings live in *kāma loka* only during one *asenkkheyya kalpa* and during the other three *asenkkheyya kappas* the *kāma lokas* (and some of the lower lying *rūpa lokas*) are destroyed and re-formed. We will discuss this in detail later.

- Thus in calculating the *pāramitā* time, “*asenkkheyya kappā lakhayak*” actually takes the time of a *mahā kalpa*. I have not yet been able to find out what “*sāra*” means to my satisfaction even though I have come across some estimates. Thus, the time taken to fulfill the *pāramitā* was some number (“*sāra*”) of hundred thousand *mahā kappas*.
- However, there are other data points that give us an idea how long that is. According to the *Tipiṭaka*, there have been 512,000 Buddhas that appeared in our world during the time Buddha Gotama to fulfill his *pāramitā*.
- There have been only 7 Buddhas during the past 31 *mahā kappas*, and with the Maithreya Buddha that is expected to appear before the end of this *mahā kappā*, there would be 8 Buddhas in those 31 *mahā kappas*. Thus if we assume there is roughly a Buddha appearing for every four *mahā kappas*, then the time taken for our *Bodhisattva* to complete the *pāramitā* would be roughly two million *mahā kappas*. If we take a *mahā kappā* to be about 30 billion years (see, “[Sansāric Time Scale](#)”), then this time would be around 60 trillion years!

- Regardless of the actual time taken, it can be assumed to be truly mind-boggling. Working nonstop (that is what “*animisa*” means), it took the Buddha fully seven days to cover this time span (recall the *nama gotta*).
 - Of course many of the key people had been with him in repeated lives; this is why it took so long (seven days) for the Buddha to go through those records.
4. When the Buddha left the site of the *Bodhi* tree seven weeks after attaining the Buddhahood, he immediately started “paying back debts” to them.
- **This highlights the importance in paying back debts and showing gratitude for those who come to help; see, “[Kamma, Debt, and Meditation](#).”**
 - One of the ten wrong views is the belief that there is no merit in paying back debts or showing gratitude; see, “[Three Kinds of Ditthi, Eightfold Paths, and Samādhī](#),” and “[Wrong Views \(Micchā Ditthi\) – A Simpler Analysis](#).”
 - Buddha’s own actions were to highlight the importance of getting rid of that wrong view.
5. It is said that he first wanted to pay back his most recent “teachers”: Alara Kalama and Uddaka Ramaputta. Unfortunately, both had died recently and both had been born in the *arūpa loka* (they had both cultivated *anāriya arūpa jhānā*). In *arūpa loka*, beings do not have eyes or ears, and thus are unable to learn Dhamma. Thus the Buddha was not able to help them.
- Next, he thought about the five ascetics (Kondanna, Bhaddiya, Vappa, Mahānāma, and Assaji) who had attended to him while he was practicing austerities for six years. It is those five ascetics that the Buddha delivered the first and second discourses at the Deer Park at Isipathana: *Dhammacakkappavattana Sutta* and the *Anatta Lakkhana Sutta* (*Anatta* is the third of the *Tilakkhaṇa*: *anicca, dukkha, anatta*). They all became *Arahants* after the two discourses.
 - Then the Buddha sought out and preached Dhamma to Yasā, a son of a wealthy brahmin, who lived nearby. Yasā and 54 friends of his became *Bhikkhus* and soon attained the *Arahantship*.
6. It is also important to note that most of those who helped the *Bodhisattva* in his efforts, had also filled versions of *pāramitā* to be major disciples of the Buddha. They themselves had worked towards liberation (*Nibbāna*) in previous lives.
- This is why most of them were able to attain the *Arahanthood* or various stages of *Nibbāna* in short times.
 - Even these days, it is easier for some than others because of their past efforts. Thus no one should be discouraged in their efforts. The efforts will pay off in time, possibly even later in this life or in future lives.
7. By the time the Buddha left Isipathana, there were thus 60 *Arahants* in his *Sāsana*. After sending them in different directions to propagate his message of liberation, the Buddha himself left towards Uruvela, to meet the three Kassapa brothers and their followers who had been with him in numerous lives in the long past.
- On the way there, he intercepted 30 young wealthy men who were looking for a woman who had robbed them of their valuables. That was not an accidental meeting either. All 30 of them had encounters with the Buddha in previous lives and were ready to comprehend the Dhamma. They all attained *Arahanthood* shortly.
8. Upon arriving in Uruvela, the Buddha had to spend a considerable time and effort to convince the Kassapa brothers that were not *Arahants*. They were *yogis* who were under the impression that they had already attained liberation, and were very reluctant to embrace the Buddha Dhamma. Finally, they became disciples of the Buddha and all 1000 of them attained the *Arahanthood* upon hearing the *Aditta Pariyaya Sutta*.

- Then the Buddha traveled with those 1000 *Arahants* to Rajagaha, the capital of the Kingdom of Magadha. King Bimbisara became a *Sotāpanna* and offered the Buddha his first monastery, the Bamboo Grove in Rajagaha.

9. While the Buddha was residing in the Bamboo Grove two brahmins, Upatissa and Kolita, met Assaji Thero (who was one of the five ascetics), and became *Sotāpannas* upon hearing a single verse from the Assaji Thero. Then they came to see the Buddha and requested to become *bhikkhus*, and attained the *Arahanthood* within two weeks.

- Of course they became the two chief disciples of the Buddha: Ven. Sariputta and Ven. Moggallana.

10. Then the Buddha, accompanied by the *bhikkhus*, made the way to Kapilavatthu, his father's Kingdom. Here, he was able to help numerous people who had been together with him many, many lives in the past.

- By the way, it is those who have mutual debts to each other who are born into the same family and share common relatives and friends. Thus one's obligations are mostly in that order. Of course one is most indebted to one's parents.
- Just so this will not convey the wrong message, this is not to condone the common practice of "giving perks" to family and friends by misusing government resources, done by many politicians today. One should give only things of one's own.

11. Thus the first several years of Buddha's life was dedicated to helping those who had been with him and helped him in many ways through multiple rebirths in his endeavor to become a Buddha. Of course, neither a *Bodhisattva* (until becoming a Buddha) nor his helpers "knew" that was the case beforehand. That is how nature works. The next post in this series discusses this issue.

- It is easy to see that people with same interests always tend to stay together, because they have similar *gathi*. This is a very deep concept that we have encountered many times. A simple explanation is given in the post, "[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavas\)](#)."

12. King Suddhodana, Prince Siddhartha's father, attained the *Arahanthood* just before passing away about five years after the Enlightenment of the Buddha.

- The Buddha, as a mark of gratitude to his mother who was born as a *deva* in *Tavatimsa deva* realm, preached the *Abhidhamma* to his mother together with other *devas* continuously for three months. The principal topics of *Abhidhamma* were then repeated by the Buddha to Venerable Sariputta, who subsequently worked with his clan of 500 *bhikkhus* to compile the *Abhidhamma Piṭaka* that we have today.
- Of course, both Princess Yasodhara and Prince Rahula entered the monastic order and attained *Arahanthood* too.
- Numerous other relatives entered the monastic order and attained various stages of *Nibbāna*.
- A fairly good book that goes through this timeline is "The Life of the Buddha" by Bhikkhu Nanamoli. It is important to note that the *Tipiṭaka* itself does not show the actual timeline of events; it is categorized according to other criteria.

13. Sometimes, it is not only those who help each other, but also arch enemies that follow each other through the cycle of rebirths (*samsāra*). While almost all other relatives of the Buddha (Prince Siddhartha) were able to attain *Nibbāna*, there were a few who could not overcome their deeply-embedded hatred towards the Buddha.

- The best examples were Devadatta and King Suppabuddha, who were the brother and father, respectively, of Princess Yasodhara. They both eventually ended up in the *niraya* (hell) for committing violent acts towards the Buddha.

18.2 Pāramitā and Niyata Vivarana – Myths or Realities?

April 29, 2016; revised November 22, 2018; September 10, 2022

1. Pāli is a “phonetic language”: some meanings come from how words are pronounced, and sometimes grammar rules are bypassed (or Pāli has its own rules, particularly when combining words). This is why people sometimes get into trouble applying grammar rules to Pāli.

- Luckily, most Pāli words have related Sinhala words, so one with good Sinhala knowledge and the basics of Buddha Dhamma can understand many Pāli terms. This is called “*pada nirutti*” or clarifying via using some key phrases and sounds. (But it takes a special knowledge or “*paṭisambidhā ñāṇa*” of a *jāti Sotāpanna* to glean the meanings of keywords like *anicca*, *dukkha*, and *anatta*, without anyone’s help).
- The word “*pāramitā*” comes from “*pireema*”, or to fulfill. Certain conditions must be met while purifying one’s mind to become a Buddha. Buddha’s 80 great disciples (*mahā sāvaka*) must also fulfill less stringent conditions.
- Attaining *magga phala* — including *Arahantship* — does not have such specific requirements (at least, I have not seen them). Yet, those also require cleansing one’s mind over multiple lives. No goals can be achieved without effort. Even when one wins a lottery, there is a reason (a good *kamma vipāka* from previous lives).
- See “[Difference between a Wish and a Determination \(Paramita\)](#)” for a simple explanation of *pāramitā*.

2. The above paragraphs may give the impression that one “knows” that one is fulfilling *pāramitā* to be a Buddha or a great disciple. **They do not know that they are gradually fulfilling such requirements.** It is only when a *Bodhisatta* reaches a certain stage of progress that he gets told by Buddhas at those times:

- First, he gets “*aniyata vivarana*” meaning a Buddha tells him that he is likely to become a Buddha in the future because he has acquired “Buddha *gati*” through his moral *gati* and his drive to find truth in past lives.
- Then when more “Buddha *gati*” are acquired and firmly established with time, a later Buddha may give “*niyata vivarana*,” i.e., that he will definitely become a Buddha.
- We discussed this in detail in the post, “[Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude.](#)”

3. At first, this “*niyata vivarana*” seems to say that the future can be deterministic. But in most cases, the future is not deterministic. One can change one’s future drastically by one’s determined efforts; see, “[What is Kamma? – Is Everything Determined by Kamma?](#).”

- The key lies in one’s *gati* (*āsava* and *anusaya* are related). It is comparatively easy to remove/change those *gathi* that one has recently acquired, but the longer one acts according to those *gati*, the more deeply embedded they become. One gets “*niyata vivarana*” when one’s Buddha *gati* is unshakable.
- This is closely related to the fact that when one attains any stage of a *magga phala*, that is never removed in future rebirths.

4. To give a very simple example, a child who has just memorized, but not grasped the concept of adding, may be able to give the correct answer if that particular addition has been memorized. But a child who has grasped the concept of addition can add any two numbers, and that “knowledge base” cannot be removed from him.

- This is the same thing that happens when one attains the *Sotāpanna* stage of *Nibbāna*, for example. When one grasps that nothing in these 31 realms can be maintained to one’s satisfaction for a long time, That “base level of comprehension of the nature of this world” is not going to change ever, even though future lives.

- With that level of understanding, one does not have to consciously think to avoid the drastic immoral actions that make one eligible to be born in the *apāyā*; thoughts of such actions never come to a *Sotāpanna*'s mind.
5. In another example from the *Tipiṭaka*, once there was going to be a war between two factions. *Bhikkhus* asked Ven. Sariputta which side was going to win, and Ven. Sariputta named the winning side.
- But when the war was fought months later, the other side won. The *bhikkhus* were perplexed; how can a prediction of Ven. Sariputta be wrong? They went and asked the Buddha. The Buddha said that Ven. Sariputta's prediction was correct based on the conditions at that time. But as unforeseeable factors came into play, the outcome changed.
6. The world is extremely complex, and it is impossible to make predictions most of the time. This is related to the *anicca* nature: any *saṅkhata* can undergo unexpected change, called *vipariṇāma*.
- But some *gati* and *kamma* can become so strong that it becomes virtually impossible to change the outcome. For example, if one kills one's parent, it is impossible to avoid birth in an *apāyā* in the next birth.
 - In the same way, when one's views about this world become clear to some level, and one can truly "see" the dangers of births in the *apāyā*, or the unfruitfulness of such actions, one's mind becomes permanently averse to such actions. That is when one becomes a *Sotāpanna*.
 - Through the next two stages (*Sakadāgāmi* and *Anāgāmi*), one's mind becomes purified to the extent that one will cease to enjoy sense pleasures automatically, and then one will never be born in *kāma loka*. At the *Arahant* stage, one sees the dangers of rebirth anywhere in the 31 realms.
7. But all those stages can be attained only if one is taught the correct path by a Noble Person, who has attained one of the four stages of *Nibbāna*. The special aspect of a Buddha is the ability to figure out that without anybody's instructions. And the mind of a Buddha is much purer than an *Arahant*'s.
- Even when one attains *Arahanthood*, some *samsāric* habits remain. Those are not defilements but just habits in the sense of doing something in a particular way, for example. Many such cases are mentioned in the *Tipiṭaka*. One *Arahant* could not remove the habit of addressing others inappropriately, even though no malice was involved. Another *Arahant* had the habit of jumping over puddles on the road.
 - But the mind of a Buddha was perfect. Not even a minor behavioral problem could be detected in a Buddha.
8. This can be compared to removing dirt from a glass of water. One could filter the water and get rid of the big pieces of contaminants first. Then one could use better filters to remove even smaller particles. Now there may not be any visible contamination. But for all practical purposes, the water is clean and that can be compared to an *Arahant*.
- But there may still be some contaminant molecules that can be uncovered only with a chemical analysis. Perfectly pure water without even a single molecule of a contaminant can be compared to the purity level of a Buddha.
 - Another meaning of "*pāramitā*" is "*pereema*" or "to filter". As one keeps filtering out contaminants (defilements) from one's mind, it becomes purer. Filtering to the ultimate level is fulfilling "*pāramitā*."
9. A person who eventually becomes a Buddha starts as a scientist or a philosopher in today's terminology. It is started via two paths, and both need to be fulfilled: "*kim sacca gavesi, kim kusala gavesi*": investigations of truth and morality.
- *Sacca* (pronounced "sachcha") means the truth; "*kusala*" is, of course morals, and "*gavesi*" is one who investigates. One starts with the intention of finding out how nature works, what morals are, and the origins of morals.

- Even today, we can assign such labels to many scientists and philosophers. Of course, only a minute fraction of them will eventually become a Buddha or a great disciple, but that is how one starts.

10. That habit (*gati*) of looking into the truth and morals grows through successive lives. Most of them drop due to off external influences and unexpected circumstances. But those few who get to cultivate those *gati* keep cultivating them. As I said before, one may not have even heard of a Buddha for many eons while cultivating such *gati*. It is just that when one is on the right (or even wrong) path, nature starts guiding one: “*Dhammo ha ve rakkathi dhammacari.*”

- By the way, one could start as a man or a woman, but only a man attains Buddhahood . This and several other things “that would not happen” are discussed in the “[WebLink: suttacentral: Bahudhātuka Sutta \(MN 115\).](#)”
- In our rebirth process, one could change sex. Sex change can happen even during a lifetime (these days, such transgenders are common).
- In the rebirth process, we have been born a man and a woman innumerable times. If I remember correctly, the *Bodhisatva* was a woman when she started cultivating *pāramitā* to become Buddha. But at some point (probably after getting *niyata vivarana*), he had been a male.
- There is a slight difference between males and females. That may not be politically correct to say these days, but that is the reality. One is a man or a woman because one has cultivated the corresponding *gati*. No matter how many laws are passed, the military will always be dominated by men, for example.

11. In the *Tipiṭaka*, it says the usual progression of one’s character (*gati*) buildup is *dāna* (giving), *sīla* (moral conduct), *bhāvanā* (mostly loving kindness towards others), and culminating in *paññā* (wisdom).

- While these main ones are being cultivated, others simultaneously cultivate, and the set of ten is called *dasa pāramitā*. The others are: *sacca* (truth), *virīya* (effort), *khanti* (patience), *adhiṭṭhāna* (determination), *mettā* (loving-kindness), *nekkhamma* (renunciation), and *upekkhā* (equanimity).
- The process has been analyzed in great detail. For example, each of those ten grows into higher stages: *upa pāramitā* (middle) and *aramatta pāramitā* (ultimate). As one keeps making progress through successive lives, such *gati* get amplified, and one makes advances to those higher stages.
- As we saw in the previous post, “[Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude,](#)” it takes an unimaginably long time to purify the mind and get to the perfect mind of a Buddha.

12. As an example, let us consider the *dāna pāramitā*. Here one starts with mundane giving (*dāna*), i.e., giving to the needy, animals, elders, *yogis*, etc.

- Then one advances to the *abhaya dāna*. Here one comprehends that every being values its life the most and thus does everything possible to save all lives. It also has an even deeper meaning: *Abhaya* means remove “*bhaya*” or fright. Thus the *metta pāramitā* grows simultaneously too. Most categories are interrelated and grow together.
- The highest is *dhamma dāna*. Of course, it starts with teaching others morals while living an exemplary life. When one becomes a Buddha, one starts teaching the Buddha Dhamma (the way to “eliminate *bhava*” or “*bhava uddha*” and attain *Nibbāna*).

13. As I said before, such instructions about *dasa pāramitā* are unknown to the world even through eons. There are many *mahā kappā* where not a single Buddha is born. Thus it is not like following a set of instructions. Those qualities grow as one’s *samsāric gati* without even realizing that one is fulfilling such requirements.

- Even today, many people engage in such activities regardless of their religions or cultures. Many of today’s scientists, teachers, physicians, philanthropists, etc., could be in such early stages.

- Thus, we should always respect and honor those who live exemplary lives regardless of their religions, cultures or any other categorization. One is considered “suitable for paying respects” only based on one’s actions.

14. It is informative to see why there are special categories of five Buddhas, seven Buddhas, 24 Buddhas, and 28 Buddhas in Buddhist literature. All these Buddhas are named and discussed in the following Wikipedia article:

[WebLink: WIKI: List of the named Buddhas](#)

- After striving for a long time as discussed in #3 above, our *Bodhisattā* first obtained “*niyata vivarana*” that he will definitely become a Buddha in the future, from Buddha Dīpaṅkara, who was the 24th Buddha preceding Buddha Gotama. A *Bodhisatta* customarily obtains “*niyata vivarana*” from 24 Buddhas before attaining the Buddhahood. The last Buddha our *Bodhisattā* obtained “*niyata vivarana* from” was Buddha Kassapa.
 - Before obtaining “*niyata vivarana*,” our *Bodhisattā* obtained “*aniyata vivarana*” or “not confirmed, but very likely” from three Buddhas named Tannankara, Medhankara, and Saranankara. As the *Bodhisattā* kept fulfilling the requirements, they were first fulfilled during the time of Buddha Dīpaṅkara, as mentioned above.
 - The special aspect of the seven Buddhas is that those were the most recent Buddhas. There have been four Buddhas (Kakusanda, Konagama, Kassapa, Gotama) in this *mahā kappa*, and there were 30 *mahā kappā* before that which did not have even a single Buddha. In the *mahā kappa* before that, there were 2 Buddhas (Siki and Vessabhu); Before that, there was only a single Buddha going back to 91 *mahā kappā*. So, there have been only 7 Buddhas within the past 91 *mahā kappā*, and the timeline is discussed in the “[WebLink: Suttacentral: Mahapadana Sutta \(DN 14\)](#).”
 - The present *mahā kappa* is a very special one, having the maximum number (five) of Buddhas in a given *mahā kappa*. We have had four Buddhas so far, and there will be one more, Buddha Maitreya, before this *mahā kappa* ends.
15. Finally, *pāramitā* are also associated with one striving to become one of the 80 disciples of a future Buddha.
- Furthermore, one striving to attain the *Arahanthood* (or *Nibbāna*) is also fulfilling *pāramitā*.

18.3 Tisarana Vandana and Its Effects on One's Gati

May 28, 2016

1. Many people consider the recital of *namaskaraya* followed by the 24 supreme qualities of the Buddha, Dhamma, Saṅgha (*Tiratana vandana* or *Tisarana vandana*) in three possible ways: (i) recite them mechanically (and erroneously), (ii) disregard them as unimportant, or (iii) even consider the practice as “mythical” per benefits of their recital.

- These qualities are called “*suvisi guna*,” where *suvisi* means 24 and *guna* are the qualities.
- These qualities (and the meanings of the words *Tisarana Vandana*) are discussed briefly in “[Supreme Qualities of Buddha, Dhamma, Saṅgha](#)”; correct way to recite them are also discussed there.

2. As I have discussed in many posts, there are many things in this world that we do not really understand. Many of the Buddhist practices have become “mystical” simply because their true interpretations as well as their correct usage have been lost. This current topic is a good example. One can reap many benefits by understanding the true meanings of these phrases AND by reciting them correctly. I have experienced these benefits.

- Now, this does not mean one can attain *Nibbāna* (or the *Sotāpanna* stage) by reciting them day and night. This is simply one of the many tools available to calm the mind and to slowly but surely change one's character (*gathi*) over time.
- As everything else with Buddha Dhamma, it is all in one's mind. If one has the motivation and the drive to learn and apply these tools, they can bring many benefits not only in this life but in future lives. But it is not like taking a pill for a headache; one cannot expect results quickly. We have developed “bad *gathi*” over beginning-less rebirths and it is not easy to change them quickly.

3. First of all, we all have seen how it is possible to convey a given message by just changing the tone. The words, “come here” can give different meanings based on the way how the words are uttered. When a parent says, “come here” to a child with love and affection, the child would be delighted to oblige. The same parent can get angry at the same child and yell, “COME HERE!”, the child is likely to cringe and back out afraid of a possible spanking.

- The “*gathi* sound” (“*gathi handa*” in Sinhala) in the two cases were totally different even though the words were the same; see below. The way the same phrase was uttered made a difference to the child's mind.

4. Many Pāli words have a different kind of power too; certain words can influence the mind strongly. As we will discuss in future posts, the early humans had a single language called Magadhi from which Pāli words originated. It was a universal language with the effects conveyed by the way the words were pronounced.

- This is why I mentioned in other posts also that Pāli is a phonetic language. Grammar rules are secondary.
- Just by listening to a recital of a *pirith desanā* (i.e., recital of *suttā*) can make a change in one's mindset, which may be even visible to others. There is a subliminal message (*saññā*) in the *suttā* that the mind can grasp, even if the person may not understand what is being said.
- **The words themselves, how they are uttered, and even who utters them, are “embedded” in “*gathi* sounds”.**

5. There are several such examples mentioned in the *Tipiṭaka*. A famous example is about a frog who was attentively listening to a discourse of the Buddha. Of course a frog could not understand what the Buddha was saying. But the “*gathi* sound” (“*gathi handa*” in Sinhala) that came from the Buddha combined with *sansāric gathi* of the frog led the frog to attentively listen to the pleasing sound from the Buddha and to have a pleasant mindset.

- While listening to the discourse, the frog was accidentally killed by the walking stick of a person there, and the frog was born in a *deva loka* instantaneously. His name was Manduka *deva* and he immediately realized how he was born there. He came back to listen to the same discourse and attained a *magga phala*.
- Then there were a bunch of bats who resided in a cave that was used by *Bhikkhus* who used to recite *pirith* every night. Those bats were all said to have born as children in the same village and to have attained *Arahantship* later. There are few other accounts as well.

6. These may sound like myths, but when one learns Abhidhamma and understands the power of a “*somanassa sahagata citta*”, (or a “thought with joy”), one could make the connection. We all, including animals who had been humans at some point in the past, have accumulated good *kamma* seeds as well as bad ones from the past.

- One of the factors that comes into play at the dying moment is the state of the mind. If the mind is highly perturbed or is “covered with” *panca nivarana* (see, “[Key to Calming the Mind – The Five Hindrances](#)”), then it allows conditions for a bad *kamma* seed to come into play. But while listening to *Dhamma* or *pirith*, those *panca nivarana* are temporarily suspended and that allows for a good *kamma* seed to come into play; see, “[Patisandhi Citta – How the Next Life is Determined According to Gati](#).”
- One’s *gathi* are not fixed. Even a person with many immoral *gathi* has some moral ones as well. What kind of *gathi* operates at a given moment depends on one’s state of mind.

7. Now we can come back to the issue of “*gathi* sound” that we mentioned in #5 above. *Tisarana vandanā* especially has the power to change one’s mindset, if recited correctly.

- Entities with same *gathi* always naturally tend to be close to other entities with same *gathi*. This can be clearly seen anywhere. People who like sports get together. People like to party all the time, hang out with others who like to do the same. This is discussed in a simple but illustrative post: “[The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavas\)](#).”
- This is why in Asian Buddhist countries it is customary to turn on *pirith* (recital of *suttā*) on the radio in the mornings and/or at night. This is supposed to keep undesired beings away and attract benevolent beings to the houses. It is actually effective if done properly. Those *pretas* with immoral *gathi* do not like to hang around when such chanting are being played. On the other hand, *devas* of the lowest realm (*Bhummataka devas*) like to stay close to such sounds/environments.

8. Another related property is “*gathi ruva*” or “*gathi* picture”. The obvious example is a picture of a Buddha, not the distorted laughing Buddha, but the serene Buddhas like shown below.

- This is why most meditators keep a Buddha statue in the meditation room. It is just another factor that helps in getting to the right mindset.
- Then there is “*gathi* suvanda” or “*gathi* smell”. Burning incense gives an odor that is also compatible with a meditation environment. A perfume on the other hand, is a distraction. A good perfume is compatible when going out on a date; that sets a compatible environment for sense pleasures.
- All these subtle things add up to make a difference. And how much of a difference depends on the person too. Some people do not need any of such “incentives” to get onto even *jhānā*. But for some others they could make a difference.

9. In order to establish this point we can think about a “party atmosphere” compared to a “meditation atmosphere”. When someone organizes a party or a dance, one decorates the room with bright colors, eye catching pictures, sensual fragrances, loud music, etc. That is the environment with “matching *gathi*” for such an event. That would be a disastrous setting for a meditation session; one would not be able to concentrate at all.

- On the other hand, a meditation atmosphere is not compatible for a dance. One cannot dance to *pirith* or to *Tisarana vandanā*. It provides a setting that is calm and peaceful, and conducive for contemplation.
- Another aspect is that people when attracted to *Dhamma* will start skipping parties as I have. I would rather stay home and learn *Dhamma* rather than going to a noisy environment let alone a party.
- One will start associating with different people too, if one seriously gets into *Dhamma*. It is not done by sheer will power; rather it just happens because one’s *gathi* change. It is just natural for “likes to get together with likes”, the Law of Attraction: “The Law of Attraction, Habits, Character (Gati), and Cravings (Āsavās).”

10. This concept actually works at a deeper level too. We emit electromagnetic radiation (*cittaja rūpa*) according out *gathi* and mindset at a given moment. Whatever the types of *Dhamma* that are attracted at

any given time are compatible with that state of the mind. A deeper discussion is at "[What are Dhamma? – A Deeper Analysis](#)."

- For example, when we are angry we never receive more good thoughts. If we are arguing with someone, what always comes to mind are just bad thoughts, bad memories about that person.
- On the other hand, when we are calm and in a joyful mood, we mostly think about good memories.
- When one is at a funeral, one's thoughts and complexion becomes attuned to that environment: one sees and hears people crying, and one gets sad and one's face shows that as well; one does not feel like laughing. On the other hand, when one is at a party it is totally opposite atmosphere, and one feels like laughing and dancing.
- Other people can also be affected by our mindset. It is quite pleasant to look at a Buddhist monk. They just have that calm demeanor which is part of their cultivated *gathi*. In fact, our bodies also change over time according our *gathi*. There are other people whom we can instantly recognize as "rough characters".
- This is a deep subject with many complexities and even exceptions. But I hope I have been able to convey the basic idea.

11. When one is reciting *Tisarana vandanā* correctly in a suitable environment, one's *gathi* will change at least during that short time for the better. One will be able to grasp deeper concepts during meditation following the recitation. When one does this over a long time, one's salient *gathi* will gradually change too.

- I know mine have changed over the past several years, and in particular within the past several months. It is a process that needs a bit of time to get traction, and then the results becomes clear one day. When I first wrote the original post (which I just revised), my enthusiasm for reciting *Tisarana vandanā* was not that high.
- However, I do not want to over emphasize this aspect. It can be considered a tool that could make a difference for some people.

12. For those who may be trying to cultivate the *anicca saññā* (i.e., comprehend what is meant by *anicca, dukkha, anatta*), reciting *Namasakaraya* followed by *Tisarana vandanā* could be helpful. I am providing the recordings below.

- The Buddha has also stated that when one is in a dangerous situation or gets frightened by something, reciting *Budu Guna (Ithipi so Bhagavā....)* can help getting rid of the fear. One could recite this just before going to bed and it might help with falling asleep; again, it depends on one's own *gathi*, how faithfully one does it, whether it is done with *saddhā*, etc.

Here is a recital of the *Namaskaraya* by the Venerable Thero (you need to adjust volume control on your computer). It is normally recited three times:

[WebLink: Listen to the verses of Namaskaraya recital](#)

Here is a recording of the *Tisarana vandana* by the Venerable Thero (You need to control the volume level on your computer):

18.4 Does the Hell (Niraya) Exist?

December 18, 2015; revised August 29, 2019; rewritten February 27, 2023

We discuss the nature of the *niraya* (Hell) according to the suttas and indirect evidence.

Introduction

1. The Buddha described a “much wider” world of 31 realms, compared to the just two realms (human and animal) that we experience. See, “[The Grand Unified Theory of Dhamma](#).”

- The Buddhist worldview is not a theory or speculation. The Buddha could “see” each of the 31 realms of this world. He could “see” how a lifestream moves from one realm to another based on *kamma vipāka* and prevailing conditions, i.e., *Paṭicca Samuppāda*.
- Many *suttā* describe Buddha’s and his disciples’ visits to *Brahma* and *deva* planes. Others describe visits of *Brahmā* and *devas* to the human world (mainly to listen to the discourses of the Buddha and to ask questions from the Buddha). In the latter category, there are 81 *suttā* in the “[WebLink: suttacentral: Devatā Saṃyutta \(SN 1.1 ~ 1.81\)](#)” and 111 *suttā* in the “[WebLink: suttacentral: Devaputta Saṃyutta \(SN 2.1 ~ 2.30\)](#)” in the *Saṃyutta Nikāya*.

2. Even though *Devā* and *Brahmā* do not face much suffering, those lives have finite lifetimes. When they die, they are primarily born in the lower realms.

- It is critically important to be aware of those realms because living beings spend most of their time in the rebirth process in those *apāyā*. See “[Rebirth – Connection to Suffering in the First Noble Truth](#).”
- Several *suttā* discuss the unbearable suffering in hell and other lower realms; see below. Also, see my post on August 28, 2019, at the discussion forum on “[WebLink: Pure Dhamma Forums: Questions on Posts in the “Origin of Life” Subsection](#).” It discusses “life in hell”.
- The following book provides vivid details of life in hell, compatible with the description in the *suttā*: “A Guided Tour of Hell – A Graphic Memoir” by Samuel Bercholz (2016). He first describes an “out-of-body experience” that is similar to many given by others (seeing his body from above), but the second experience is a “trip to hell”.

3. Here, we will discuss more indirect evidence from our experiences of the existence of hell (*niraya*).

- Beings in most realms do not have the ABILITY to change their destiny. They pay off their past *kamma*, whether good *kamma* in the *Deva* or *Brahma* realms or bad *kamma* in the human and lower realms (*apāyā*).
- Among living beings, it is primarily humans who can mold their future; they are the ones who can cultivate *citta* with high *javana* power. They are the ones who do (*abhi*)*saṅkhāra* that lead to both good and bad rebirths (via improving the character or “*gati*”). They either enjoy the fruits of those in good realms or pay for them in the *apāyā* and eventually return to the human realm after a long time. That is what all of us have been doing from an untraceable beginning.

Niraya (Hell) Does Exist

4. Here is a youtube video that provides a pretty good description.

[WebLink: youtube: Buddhist Cosmology \(9\): Hell Realm](#)

- This series has other videos about other realms, but I have not watched them. If you have any questions about them, I can take a look. Please ask at the discussion forum.

5. The following is a discourse by Waharaka Thero on the topic “Is there evidence for the existence of a niraya (Hell)?” (“අපට නෑ අනෙක් නිරයක් පිළිබඳව යට තිබේද?”):

[WebLink: audio file: Is there evidence for the existence of a niraya \(Hell\)?](#)

Download: [“WebLink: mp3 download: 68-වන-සංඝකූත්තනාදිය-අපට-නමැනෙන-නිරයක්-පමුණ-යට-නිබඳේ”](#)

- In the first 29 minutes, *Thero* explains that there are many things in this world that average humans cannot perceive. Unseen beings are living among us (*gandhabbas* and some *petas*) that we cannot see, but those with *iddhi* powers can see.
- @29 minutes, *Thero* discusses the sound recording from Hell mentioned in the video above. **He says he had heard similar “hellish sounds” while being in samadhi a couple of times** (when he deliberately sought to hear sounds from Hell), but he did not want to hear them again.
- @35 minutes, reference is made to the video in #6 below.

Do We Need Firsthand Experience with the Existence of Hell?

6. The following is the type of video referred to by Waharaka Thero in #5 above. There are several videos on YouTube. It will start with the sounds, but you can play the video from the beginning if you like.”

- There is a book, “23 Minutes In Hell: One Man’s Story About What He Saw, Heard, and Felt in that Place of Torment” by Bill Wiese. This is a different account. Apparently, “he made a trip to Hell” with his *manomaya kāya* (*gandhabba*.)

7. We should ask the following question. Is it necessary to directly observe something with our five physical senses to believe its existence?

- When many people hear about the *apāyā* — other than the animal realm — they refuse to consider their existence. That is because “they cannot see those realms.” (By the way, there are four *apāyā* (*niraya*, *preta*, *asura*, or animal).
- But science disproves that contention. Science was unaware of billions of galaxies and an uncountable number of planetary systems like our solar system until the 20th century. Then better instruments became available; see, [“Wrong Views \(Micchā Dittī\) – A Simpler Analysis.”](#) Many such examples are given in the [“Dhamma and Science”](#) section.
- However, the Buddha could see those realities 2500 years ago by purifying his mind. We can also “see” the existence of some of these realms if we can cultivate *abhiññā* powers.
- Refusing to consider anything that cannot be confirmed with one’s direct experiences is not a good idea. Several posts discuss that in detail, including [“Wrong Views \(Micchā Dittī\) – A Simpler Analysis.”](#)

Description of Life in Hell in the *Suttā*

8. I am going to summarize what we can glean from the *suttā* (plural of *sutta* is *suttā*) in the Tipiṭaka of the four *apāyā* and other realms including the *niraya* (or the hell). The general layout of the 31 domains was summarized in the post, [“The Grand Unified Theory of Dhamma.”](#)

- The *niraya* is in the deep interior of the Earth. The “hell beings” have solid bodies that can withstand various forms of torture. A “hell being” is born via *opapātika* birth, with a full physical body capable of experiencing suffering.
- The hell-wardens who impart those sufferings to the hell beings are also living beings. They are born in the *niraya* because of their “*gati*” (character qualities) due to the “*saṅkhāra*” that they developed in previous lives. Their bodies are tolerant of the harsh conditions in the *niraya*. They do not suffer like hell-beings.
- There are many posts on the website on “*gati*.” For an introduction, see, [“The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavas\).”](#)

- “[WebLink: suttacentral: Devadūta Sutta \(MN 130\)](#)” describes “hells” or “*niraya*.” A translation at: “[WebLink: accesstoinight.org: Devaduta Sutta: The Deva Messengers](#).” A similar *sutta* about some realms located close to Earth is the “[WebLink: suttacentral: Ātānāṭiya Sutta \(DN 23\)](#).” A translation at, “[WebLink: suttacentral: The Ātānāṭiya Discourse \(DN 23\)](#).”

9. *Devadūta Sutta* vividly explains how hell-wardens torture a hell being. There is a king Yama (or probably many kings) in each *niraya* (there are several). He interrogates some of the newly arrived hell-beings “who were at the borderline” and barely made it to hell. He reminds them of the opportunities they had (while living) to understand the bad consequences of their actions.

- It is important to note that king Yama interrogates only those new arrivals from the human realm. An uncountable number of beings are born in the *niraya* from other *apāyā*. They move from one *apāya* to another until a rare opportunity comes to get out of the *apāyā*.
- Such a Yama king is born there also according to the “*gati*” they had cultivated in previous lives; see below. Like all other living beings, those hell wardens and king Yama have finite lifetimes.
- Many *suttas* describe the propensity to be born in an *apāya*. A series of 30 *suttas* starts with the “[WebLink: suttacentral: Manussacutiniraya Sutta \(SN 56.102\)](#).” According to those *suttas*, most of those at the end of their human or *Deva bhava* are reborn in an *apāya*.

Based on Experience – Not Speculation

10. It is significant to note the ending of the *sutta*, where the Buddha says, “I tell you this, monks, not from having heard it from another contemplative or *brahman*. On the contrary, I tell you this just as I have known for myself, seen for myself, understood for myself.” That is what I mean when I say the Buddha experienced what he taught. He could “see” all of the 31 realms.

- Of course, we have faith in the Buddha to believe. However, we can see that all he had taught was self-consistent. There are no contradictions; see “[Buddha Dhamma: Non-Perceivability and Self-Consistency](#).”

11. There are close comparisons in the world that we experience. A good example is the comparison of policemen to the hell-wardens. They both like to punish those who have done immoral acts. Being a policeman is not easy; they are under stress, and it is not easy to deal with rough criminals. Not everyone can be a policeman (or policewoman).

- They have cultivated “*gati*” or habits that do not tolerate “bad behavior.” They always think about ways to find and bring those who do immoral deeds to justice.
- King Yama is like a judge; he also has a similar *gati* comparable to hell-wardens but does not punish the culprits personally.

Body Types in Different Realms

12. A discussion on the body types can illustrate that the specific *kamma vipāka* prepares the physical body. Each body type can experience *vipāka* according to the *gati* of that being.

- The hell-being is born in a *niraya* to experience the *kamma vipāka* corresponding to *kamma* done with hate, like killing or torturing others. But that *kamma* was done after cultivating “hate *saṅkhāra*” for a long time.
- A *preta*’s body is built in a way to experience hunger; many have massive bodies with tiny mouths, so they can never satisfy hunger. One is born a *preta* because one has cultivated “*preta saṅkhāra*.” One will always think about sensory pleasures and crave more. That applies not just to the poor. One can be wealthy but still not be satisfied with what one has. On the other hand, there may be a poor person who is satisfied with what he/she has and does not cultivate “*preta saṅkhāra*.”

- The “*asuras*” are those who have cultivated “*asura saṅkhāra*,” i.e., those who like to get “free rides.” They depend on others for their needs and are too lazy to work and make a living. Those who steal or embezzle money from others also have similar *gati*.
- Animals (called “*thirisan*” because they have all three “*saṇ* of *lobha*, *dosa*, and *moha*) have a mixture of those *gatis*; see, “[What is ‘Saṇ’? Meaning of sansāra \(or Saṁsāra\).](#)”
- One cultivates a particular *saṅkhāra* because one has a specific character or *gati*. And the more *saṅkhāra* one does (thinking, speaking, and doing certain things), the more established *gati* become, which in turn leads to corresponding *jāti* (births); see, “[Gati to Bhava to Jāti – Ours to Control.](#)”

Comparison with Modern Science

13. In the post “[The Grand Unified Theory of Dhamma](#),” the 31 realms were represented by spherical shells with a sphere in the middle. The bodies of the beings in lower realms were higher in general than those of the living beings in the higher realms. Each “inhabited” planetary system has all 31 realms. But most planetary systems are not “inhabited.”

- Scientists say the nearest planetary system to the solar system is Alpha Centauri, located 4.37 light-years away; see [WebLink: wikipedia: Alpha Centauri](#). A light-year is a distance traveled by light in a YEAR at the speed of 299 792 458 m/s (186,000 miles/second).
- That is a humongous distance that cannot be traveled with current technology or any technology in the foreseeable future. Traveling to that star system would take 100 years; see [WebLink: wikipedia: Project Longshot](#). Thus it is doubtful that we will verify the existence of life in other planetary systems during our lives.
- However, there are other living beings in the solar system that science has not found. That agrees with scientists’ admission that only 4% of the universe’s mass is explainable by science.

14. The *niraya* or *hell* is located deep inside the Earth, and those beings have very dense bodies.

- The other three *apāyā* are located at and close to the surface of the Earth. Of course, animals live among humans, and *asuras* are said to live mainly in the oceans. The *petas* also live on the surface of the Earth just like us, but we usually cannot see them. They all have body densities comparable to humans, except for *petas*. Some *petas* have “fine bodies” and suffer not bodily, but mentally: they can recall their past lives and bad deeds that led to the *preta bhava*.
- There are a few *Deva* realms close to the Earth that we cannot see. Most *deva* realms lie well-above the surface of the Earth. The *Brahma* realms are even further out. Of course, *devas* have much less dense bodies than humans, and *Brahmas*’ bodies are finer at higher realms. At the highest *Brahma* realm, an *arūpa Brahma* has only one *suddhaṭṭhaka*, the *hadaya vatthu*; see, “[The Origin of Matter – Suddhatthaka.](#)”
- The body types in the 31 realms discussed in the previous post: [Body Types in 31 Realms – Importance of Manomaya Kaya.](#)

Births Correspond to Gati (Character Qualities)

15. Roughly speaking, we can say beings with more immoral “*gati*” are born with denser bodies inside or on the surface of the Earth. Their thick bodies are used to impart *kamma vipāka* either via torture or via bodily ailments and diseases.

- The beings in the *deva* and *Brahma* realms, with less and less dense bodies do not suffer bodily ailments. At the end of their *kammic* energy, they disappear and are born at the next realm appropriate for the most potent *kamma* seed they have. It could be in a lower sphere, including the *niraya* (unless they had attained at least the *Sotāpanna* stage).

- Thus beings with better and better “*gati*,” i.e., “*deva gati*” and “*Brahma gati*,” are located further and further away from the surface of the Earth, and those hell-beings with the “worst *gati*” are located below the surface of the Earth.

Our Own Experiences

16. We all have seen some children who don’t get their way become mad, fall on the floor, and cry. It is as if they want to go towards the *niraya* (sometimes they bang their heads on the floor). That is a reflection of their “*gati*” AT THAT MOMENT.

- In the same way, they (and even adults) jump up with joy. It is as if they are trying to advance toward the higher realms. Again, it reflects their “joyous *gati*” at that moment.
- Another example is the behavior of criminals. We all have seen pictures of criminals when they come to the court of law: their heads are lower. They feel a heavy burden.
- On the other hand, when we have done something exemplary, we feel good and keep our heads high. Our bodies feel lighter too.
- These may not be Earth-shattering observations, but they are consistent with the Buddha’s world view.

17. Thus, we can momentarily live in the *apāyā* or higher *deva* and *Brahma* realms.

- I am sure anyone can recall such moments. When we get outraged, we burn inside, our bodies get heated, our faces become reddish, and we sweat. Seeing a furious person, or even a child, is not a pretty sight.
- On the other hand, when we are calm and relaxed, especially after doing a moral deed, we feel good, and our body language reflects that. We are confident; we feel lighter and are “cooled down” inside. It is always a pleasure to look at Buddhist monks.

18. Thus, even though we may not see the beings in the other realms, many indicators are consistent with the “bigger world picture” of the Buddha. We have reasons from our experiences to believe in the existence of such realms. That may be a small part of the story, but indirect evidence like this is always consistent with Buddha Dhamma; we will discuss more later. One can contemplate these things during insight meditation and verify for oneself.

18.5 Can Buddhist Meditation be Dangerous?

June 17, 2016; revised July 22, 2021

1. A friend of mine alerted me to a recent article (in 2016) on the possible dangers of mindful meditation:

[Weblink: BBCRadio: Is Mindfulness Meditation Dangerous?](#)

- It seems that there are possible dangers in not only “mindful meditation” but other types of meditation too. I did a Google search and found many articles, videos, and podcasts on the subject. You can do the same to get an idea (try “dangers of meditation” and “dangers of meditation youtube”).
- A recent book, “The Buddha Pill” by Miguel Farias (2015), which downplays benefits of meditation and also points to some reported bad outcomes.
- There is a vast amount of misinformation out there. So, I thought of writing down my own thoughts based on the Buddha Dhamma that I understand and practice. In genuine Buddhist meditation, too, one may encounter some discomforts, as I will discuss below. But those are temporary and definitely not dangerous.

2. **First of all, 99% of “Buddhist meditation programs” that are being taught and practiced today are not compatible with Buddha Dhamma, the Buddha’s original teachings.** Let us first discuss this point.

- The goal of the Buddha was NOT to teach practices and methods by which to attain temporary relief from the daily stresses of life. Such procedures had been practiced even when the Buddha (Prince Siddhartha) was born 2500 years ago.
- For example, breath meditation used by even Theravāda Buddhists today was a practice that the Buddha rejected; see, “[Bhāvanā \(Meditation\)](#)” section and in particular, “[6. Ānāpānasati Bhāvanā \(Introduction\)](#),” which discusses breath meditation.

3. I do not dispute or agree with the findings reported in the above articles or the above book. I do not know those specific cases, and it does not matter either because those meditation techniques are not “Buddhist meditations”.

- So-called “Buddhist meditators” use many meditation techniques; most are a waste of time and some are definitely bad. **For example, one of the dangerous techniques is to try remove all thoughts that come to one’s mind. One could lose memory (and perception) if this is done for a long time.**
- The Buddha said to stop IMMORAL thoughts, not ALL thoughts. There is a big difference between the two. Furthermore, he encouraged cultivating moral thoughts (*Ānāpāna* is “āna” AND “pāna”; see, “[6. Ānāpānasati Bhāvanā \(Introduction\)](#).”)

4. The Buddha really focused on the *sansāric* suffering, i.e., unimaginable suffering in some realms of this world; see “[The Grand Unified Theory of Dhamma](#)” or other posts on suffering.

- For a normal human, It is not possible to avoid births in the future in the four lowest realms (*apāyā*) filled with suffering without attaining at least the *Sotāpanna* stage of *Nibbāna*. Not only are bad actions done in this life, but bad actions in previous lives can contribute. We have been lucky to get this human life due to a past good action (*kamma*), but all of us have done both good and bad actions in our deep past.
- **Future births in the *apāyā* are stopped not by “erasing” past bad *kamma* but mainly by a subtle mechanism that involves understanding the Buddha’s world view.**
- This website is all about explaining that complex process, but I can state what the result is: **the solution is to remove greed and hate from our minds which happens to a large extent when one comprehends the “bigger world picture” of the Buddha (which is called getting rid of ignorance of the correct worldview or attaining *sammā diṭṭhi*).**

5. Thus one could take one of three approaches:

- One could learn pure Buddha Dhamma, the original teachings of the Buddha, and understand his world view. When one learns and comprehends this wider world view, one can clearly see the possibility of much suffering in future lives.
- The other approach is to believe in the above stated conclusion, i.e., that getting rid of greed and hate from one's mind will remove future suffering, and to start working on it.
- But there is a third approach, which is to do both in parallel.

6. The third approach above is the best since it accelerates the process of cleansing. Furthermore, one can experience relief from not only future suffering but also in this life.

- However, we must understand that it is impossible to remove all types of suffering in this life by meditation. What we experience in this life are a result of what we have done in the past. It is possible to avoid some bad outcomes but not all; see, "[What is Kamma? – Is Everything Determined by Kamma?](#)."
- The best way to convey the information is to describe my own experience (at least parts of it). Even though each person's experience will be different, there are some common themes.

7. First of all, one does not even need to understand what *Nibbāna* is to get started. Even though it is possible to describe what *Nibbāna* is (there are many posts at the site), **it is not easy to truly comprehend what is meant by stopping rebirth process, especially at early stages.**

- For example, a child in primary school may say she wants to be a scientist. That is her goal because she has heard it is a good occupation. But she has no idea what a scientist does.
- In the same way, most Buddhists know that *Nibbāna* is a coveted and worthy goal but have no idea what it is. Most have not even thought much about it. They know that it involves stopping the rebirth process, but If pressed some may even say they do not "really want to attain *Nibbāna* yet; I want to enjoy life a bit more." That is because it is not easy to comprehend the dangers of such "enjoyments."
- However, the above child knows that she has to work hard and get good grades to become a scientist in the future. As she progresses through primary, secondary, and high school, she will gradually get a better idea of what becoming a scientist means and involves.
- Most Buddhists can be compared to that child stuck in primary or secondary school. They refrain from immoral actions to some extent but have not proceeded any further due to several reasons: lack of time, lack of understanding the urgency to do something before one gets old and the brain starts slowing down, etc.

8. On the other hand, most beginners to Buddhist meditation may not have any idea what *Nibbāna* is or may not believe in the rebirth process. **And one does not need to.**

- As I have tried to explain in many posts, *Nibbāna* has many levels starting from just a relaxed state of mind all the way to stopping the rebirth process. One needs to proceed gradually, experiencing the increasing level of relief on the way.
- Any reasonably moral person can see the benefits of living a moral life. Most religions teach how to live a moral life, at least to some degree.
- The first thing to do is to try extending this way of moral living by incorporating factors that other religions may not teach. For example, killing animals is not considered immoral in many of the major religions.
- Killing other people for any perceived benefit is an inconceivably bad idea. We have to stop calling such ideas "religious" regardless of the "religious label" attached. One would be bound for the worst sufferings imaginable for billions of years.

9. I think we live in a world today that is too "politically correct." We are afraid to give our honest points of view due to fear of being labeled "insensitive to other religions or cultures." We should be free to point out and condemn immoral and harmful actions.

- For me, there are no religious or cultural boundaries; we live this life for about 100 years and may be reborn in a different culture that may follow a different religion; see “[Implications of the Rebirth Process in Daily Life and in Society](#).” However, it is not good to impose sudden cultural changes. That could lead to major disruptions in societies.
- I intent to make as much progress as possible in this short time left and to help others who may be interested.
- I also think it is a disservice not to share something that one has experienced to be of value. It is, of course, up to others even to bother reading about it.

10. Going back to our discussion, one should **avoid** things that we know deep inside to be bad: **engaging in dishonest and harmful behavior**. This of course has many facets and levels. So, one should start stopping actions such as: taking advantage of others in any way, engaging in sexual **misconduct**, avoiding drugs and cutting down on alcohol, etc.

- This gradual process is described in detail in the first several posts in the “[Bhāvanā \(Meditation\)](#)” section. What I like to do here is to point out some key points that I think could be useful.

11. **It is obvious that meditation, at least in the beginning, does not require one even to sit down.** Before one gets to that stage, one needs to remove some cobwebs from the mind that have accumulated over time.

- Some people cannot sit down and concentrate anyway; the mind likes to wander around. **This “agitation” is due to greed and hate, even though it may not be obvious.** What breath meditation does is force the mind to concentrate on breathing. That helps stop this wandering.
- And it does work for some people. But any calming effect is temporary. One may feel good during a meditation retreat, but the mind goes back to the agitated state after returning to “real life.”
- Thus if one does the standard “breath meditation” (without doing crazy things like trying to stop all thoughts) it is unlikely that they will experience any bad psychological effects. Still it is bad in the sense of being an utter waste of time in the long run.
- Many people I know to be meditators are stuck in this stage for tens of years, enjoying the temporary relaxation **and refusing to get out of that “comfort zone.”** By their own accounts, they have not made significant progress. But for some reason, they are still “being hopeful.”

12. **Genuine Buddhist meditation is focused on long-term effects.** As the book’s title in #1 above implies, many people believe that going to a meditation session is like taking a pill for a headache; one is after a quick, temporary solution.

- Buddhist meditation starts with stopping immoral activities that one can clearly see, such as those mentioned in # 8 and #10 above.
- If one can persevere for a few weeks or months (depending on how many “cobwebs” are there), one should start experiencing a better state of mind. One will be able to concentrate on a given task (even a mundane task) better. In a few months, one can look back and see that one has changed in some ways.
- Then one can incorporate more “good habits” and discard more bad habits. One will start seeing the futility of lying.
- By the way, one will be able to absorb more from the posts at this site with time too.

13. As time goes, one can try “sitting down” meditation sessions. Just sit in a quiet room away from disturbances, and think about a Dhamma concept. One could even read a post and contemplate it while reading.

- Actually, this is what I did in my early days. I would be sitting at my desk and reading a book or listening to a discourse on the internet from my teacher Thero. As I contemplated and started comprehending some concepts, I felt joyful in my mind, and I could start feeling a lightness in the body with time.

14. This is the beginning of a process that the Buddha described as, “*pīṭimanassa kāyo passambhati, passaddhakāyo sukhaṃ vediyati, sukhino citāṃ samādhīyati.*” That means, “joy in the mind (from absorbing Dhamma) leads to a lightness in the body, lightness in the body leads to happiness (*nirāmisā sukha*), and that leads to *samādhī* (enhanced concentration and a relaxed mind).”

- Once one starts feeling joy in the mind and lightness in the body, there is no stopping. Because, now, one can clearly see the benefits.
- Then it becomes easier to grasp deeper concepts, which in turn leads to more joy, etc., and the whole process repeats and accelerates.
- However, how much progress one makes depends on many factors. Some have practiced meditation in previous lives and they progress relatively fast. Regardless of the actual time taken, most should be able to make at least some progress. **If it appears that one has not cultivated meditation in previous lives, it is time to start now.**

15. **When I was making more progress (especially when grasping *anicca, dukkha, anatta*), I felt some physical sensations.** When I started feeling those, luckily, I had heard about them from my teacher Thero’s discourses (**by the way, I have not met Thero or talked to him personally; both times I went to Sri Lanka, he was not available**).

- Different people feel this kind of discomfort in different body parts above the waist. I am not talking about leg pains due to sitting cross-legged, etc. If a given posture becomes uncomfortable, one needs to change the posture. Some people can sit cross-legged for longer times simply because they are more flexible or have had more practice.
- Mine started in the head, throat, and hands. They were not painful at all. They are more like pressure waves. But if one did not know that it could happen, one could be concerned because it happens only during formal sit-down meditation sessions.
- Other possible “symptoms of progress” are sweating and becoming thirsty (if this is the case, keep a glass of water close by). Yes. All these are good symptoms; **they indicate that the body is beginning to respond.**
- This was my first personal confirmation that it is not the body that gives rise to consciousness. **It is ALWAYS the mind that controls the body. My mind decides when I want to do a meditation session. Furthermore, I can change my body sensations with my thoughts!**
- I have not yet heard anyone else experience it, but my body freezes when I get into *jhānā* (up to the third). It really freezes like a statue. If someone comes and tries to pull my hands apart, it is difficult for them to do. But when I decide to stop the session, the body unfreezes within seconds. This is undeniable evidence that the mind can control the body.
- The explanation for these (and other types of) experiences involves the concept of the *gandhabba* that I have been discussing for some time now. These are discussed in, **“Possible Effects in Meditation – Kundalini Awakening.”**

18.6 Boy Who Remembered Pāli Suttas for 1500 Years

November 21, 2018; April 25, 2020

Introduction

1. This is a true story about a boy (Dhammaruwan) who recited complex and lengthy Pāli *suttā* at five years of age, which sounded very different from current chantings. Furthermore, he remembers accounts of his previous life 1500 years ago, when he accompanied the famous Buddhaghosa on his trip to Sri Lanka.

- Dhammaruwan was born on November 18, 1968, in Matale, Sri Lanka. At the age of about two years he would sit in meditation and then start chanting. At times he would speak in a language not understood by his mother, who tried to hush him up.
- His step-father encouraged the boy to continue and regularly made recordings of the chants.
- These accounts come from the book, “WebLink: wisdompubs.org: Rebirth in Early Buddhism and Current Research” by *Bhikkhu* Anālayo (2018), and WebLink: discourse.suttacentral: Skype interview with Ven. Bhikkhu Bodhi, 16th September 2014. Both *Bhikkhus* have had long-term interactions with Dhammaruwan.

Previous Life in India – 1500 Years Ago

2. According to Dhammaruwan's memories, he learned the Pāli chants in a former lifetime in India, where he had been born as the son of a *Brāhmin* and trained in memorization of the *Vedas*. He had gone forth as a Buddhist monk and become a student of the eminent monk Buddhaghosa at Nālandā, India. For a historical time line, see, “[Buddhaghosa and Visuddhimagga – Historical Background](#).”

- **My comment:** This means Dhammaruwan was born a human over 1500 years ago: That is another piece of evidence that a human *bhava* can last thousands of years during which one may be reborn with a human body many times. In between those rebirths, one would be in the *gandhabba* state, just with the mental body; see, “[Bhava and Jāti – States of Existence and Births Therein](#)” and “[Gandhabba \(Manomaya Kāya\)- Introduction](#).” Further more, both Dhammaruwan in that previous life and Buddhaghosa were *Vedic Brāhmins* before converting to Buddhism. That is how those breath and *kaṣiṇa* meditations got into Buddhism. See, “[Is Ānāpānasati Breath Meditation?](#).”

3. After being trained as a *bhāṇaka* (a reciter), he was chosen to accompany Buddhaghosa from India to Sri Lanka. Having come to Sri Lanka, he stayed with Buddhaghosa at the Mahāvihāra in Anurādhapura, of which he remembers various details.

- These recordings of Dhammaruwan are strong evidence for rebirth. How could a child of age 3-5 even remember such complex Pāli words?
- The way he recites the *suttā* — the way he pronounces Pāli words — is better than most *bhikkhus* today. But the recitals sound different from those that we hear these days; instead of monotonic chants of today, keywords stand out in this recital style.
- One can clearly see that Dhammaruwan, as an adult, chants just like any other adult today; see #6 below.

Recitals From 1500 Years Ago

4. Here is a youtube video of a few of his recitals:

WebLink: youtube: Dhammaruwan - Maha Mangala, Karaniya Metta and Ratana Sutta

Here are recordings of several *suttā*, with downloadable links:

Dhammacakkappavattana Sutta:

Mahā Mangala, Ratana, and Karaniya Metta Suttā:

[WebLink: Mahā Mangala, Ratana, and Karaniya Metta Suttā Download](#)

Bojjhanga Sutta:

[WebLink: Bojjhanga Sutta Download](#)

Information From *Bhikkhu* Bodhi Interview

5. The following is an excerpt from the interview mentioned above with *Bhikkhu* Bodhi in 2104, which had a discussion on Dhammaruwan about a quarter of the way into the interview:

“There is almost no other rational explanation [apart from real past life memories] for how he could know these *suttā*. The sceptic might say he must have listened to monks chanting them over the radio. We might accept that explanation if he had recited the *Metta Sutta* (Sn 1.8), the *Mangala Sutta* (Sn 2.4), or the *Ratana Sutta* (Sn 2.1), or maybe even the *Dhammacakkappavattana Sutta*. But even that would be somewhat stretching the bounds of credulity: that a 3 or 5 year old boy should be reciting the whole *Dhammacakka Sutta* (SN 56.11) just by listening to it on the radio, without any text in front of him. But as a 7 or 8 year old he also chanted the entire *Girimānanda Sutta* (AN 10.60), and that is just so rarely chanted by monks on the radio. And then there is a recording of him reciting passages from the *Paṭṭhāna*, the book of conditional relations in the *Abhidhamma*. I didn’t compare his recitation with the text, because he doesn’t say which portion he’s reciting ... the *Paṭṭhāna* consists of six or seven volumes of very repetitive text with just minor variations.

Then his intonation is very different from the contemporary Sri Lankan style of chanting. Just by listening, you can tell it’s coming from another era. It’s not the modern style of Sri Lankan chanting. And then there’s something very interesting. I don’t think anything has been published or spread around about this. Years ago I was listening to his recitation of the *Mahānidāna Sutta* (DN 15) with the PTS Pāli edition in front of me, where they have footnotes with variant readings. I found that in a number of places where there were differences between the Sinhala and the Burmese script editions he was reciting in accordance with the Burmese script edition. But not always: there were a few places where there were differences, and he was following the Sinhala edition. But in maybe 65% of the cases where there was a difference, he was following the Burmese script edition”.

“Old Recital Ability” Lost at Age Twelve

6. Dhammaruwan lost this ability to recite in this particular fashion after about 12 years of age. These days, when he chants the same *suttā*, he recites them like current *bhikkhus* recite them.

- Even in those early years, he was not able to recite in that “special way” at any time. According to *Bhikkhu* Bodhi: “You know, you’d ask him, “Ruwan recite such and such a text,” and he was not able to do it. But occasionally he would say to his adopted father, Bertie: “Uncle, uncle, I’m starting to remember. I’m starting to remember!” Then Bertie would get the tape recorder and set it up and record his recitation.”
- Therefore, the ability to recite that way was not there all the time, even in those early years.
- Now, of course he has lost those memories and recites those *suttā* just like anyone else recites them these days.

Here is a recording of the *Karaniya Metta Sutta* as an adult (chanting starts @2 minutes):

[WebLink: Karaniya Metta Sutta as an adult Sutta Download](#)

Related Information

7. Bhikkhu Anālayo's book has complete transcripts of all the recorded *suttā* that Dhammaruwan recited; see, pp. 167-237.

- Other rebirth stories and evidence for rebirth are discussed in, "[Evidence for Rebirth](#)."

In the following video, a child describes her life as a *deva* during the time of the Buddha (in Sinhala.) She says the Buddha was different than depicted in the current statues (@21 minutes).

[WebLink: youtube: දවෝලවෙහිසිතරය - පරෙ භවය දකින දරුවකු විසින් Buddhist Heaven](#)

- More information at, "[Mental Body – Gandhabba](#)," "[Gandhabba \(Manomaya Kaya\)](#)," and "[The Grand Unified Theory of Dhamma](#)."

18.7 Do Buddhists Pray and Engage in Idol Worshipping?

May 5, 2019

These are issues that are a bit hard to understand for those who do not have a deeper understanding of Buddha Dhamma.

1. First of all, paying respects to the Buddha (and symbols representing him) cannot be equated with “prayer” in many other religions. Praying is associated with making a request from a higher being (a God, a Brahma, etc), and those requests are for making one’s life better, to solve a mundane problem one has, or asking for a material gain.

- The prayers are requests to the gods for mundane things and protection. The gods are asked to bestow health, wealth, material things, and to provide for various needs; they are also asked to forgive one’s transgressions.
- In some cases, offerings are made to the higher being(s) first, and then one prays for whatever one desires, as in Hinduism (nowadays, this is practiced even in some Buddhist temples).
- Buddhists do not pray. They engage in meditation, contemplating the true nature of this suffering-filled world. There is nothing in this world that is worth craving (and thus praying for).

2. On the other hand, the primary goal of a Buddhist is to stop the rebirth process and attain *Nibbāna*; see, [“A Buddhist or a Bhaddhaya?”](#)

This itself is hard for many to understand, especially for those who do not believe in the rebirth process. But the Buddha taught that one’s existence does not end at the death of physical body; one will be reborn endlessly in one of 31 realms “in this world”; see, [“Buddhism without Rebirth and Nibbāna?”](#)

- Rebirth process continues as long as one thinks that existence in this world is fruitful and, some day, will lead to true happiness. The Buddha explained that acting with greed, hate, and ignorance causes this wrong perception.
- One part of ignorance is not believing in rebirth.
- Suffering is present at any of those 31 realms and thus suffering exists even in the highest *brahma* realms; see, [“31 Realms Associated with the Earth.”](#)
- Therefore, the goal of a true Buddhist is to stop the rebirth process all together. This is done by cleansing one’s mind. Learning the world view of the Buddha and following his Noble Eightfold Path, which includes contemplation (meditation) and living moral life (*sīla*), will lead to cleansing of the mind; see, [“Living Dhamma.”](#)

3. Therefore, there is nothing to ask from the Buddha; the Buddha no longer lives in this world. It is actually quite the opposite. Understanding Buddha’s teachings (Buddha Dhamma) leads to the realization that there is nothing in this world that is worth craving or desiring for. In fact, it is those cravings that trap one in the rebirth process.

- The only way to stop future suffering is to learn the true nature of this world and see not only the futility (unfruitfulness), but also the dangers in craving for worldly things.
- A Buddhist never asks favors from the Buddha nor requests forgiveness for any immoral deeds committed. A true Buddhist tries to abstain from immoral deeds, speech, and thoughts by controlling one’s mind, i.e., by being mindful; see, [“Mahā Satipatthāna Sutta.”](#)
- So, why do Buddhists pay respects to symbols representing the Buddha?

4. A big part of a life of a Buddhist is to “pay back debts” and also pay respects to those with higher wisdom. One of the first acts of the Buddha after his attaining Enlightenment was to look back at previous lives and to recall who helped him (in past lives) in his efforts to attain the *Buddhahood*; see, [“Animisa Locana Bodhi Poojā – A Prelude to Acts of Gratitude.”](#)

- Then he spent a significant part of his early years after Enlightenment to seek and teach Dhamma to those people, as explained in the above post.
- True comprehension of Buddha Dhamma leads to the realization that the greatest gift one could have is to receive the true and pure Buddha Dhamma: the way to stop even a trace of suffering from arising.
- The worship of the Buddha (using symbols that represent him) means paying homage, veneration and devotion to him and what he represents, and not to a stone statue, a picture, etc.

5. There is a second — and equally important — aspect of paying respects to the Buddha. This is more to be experienced. When I was child in Sri Lanka, our family used to go to the temple regularly, especially on Full Moon days when *bhikkhu* would deliver a discourse (*desanā*).

- We would go to the temple ahead the scheduled delivery of the *desanā*, and would offer flowers to the Buddha, light some oil lamps and incense, and recite several *gāthās* while make those “offerings”. Then we would sit and listen to an hour-long *desanā* by a *bhikkhu*.
- That really helps calm the mind and get in to a mindset where one is able to forget about the day-to-day stresses and comprehend the *desanā*.
- The calm and serene image of the Buddha is conducive to calming one’s mind, and the offerings of pretty flowers symbolize one’s intention of not being attached (and not to crave for) worldly things.

6. Some people say that Buddhists worship statues, in the sense of believing that those statues have some inherent magical power.

- But such ideas are quite incorrect. Buddhists do not ‘worship’ Buddha statues any more than Christians worship the cross or Muslims the Kaaba.
- Like the cross and the Kaaba, a Buddha statue, a *Bodhi* tree, or a *stūpa* is a symbol that can be seen as helpful in showing devotion, uplifting and calming the mind, and thus enables one to meditate with a calm mind.

7. Now let us discuss the significance/purpose of making offerings.

- There are many kinds of offerings: meals to the *bhikkhus* are the most meritorious among the “giving” (*dāna*) category.
- Making offerings to the Buddha is also done traditionally; small portions of the food that is prepared for the *Bhikkhus* is first offered in the name of the Buddha, before the food is offered to the *bhikkhus*.
- Giving to poor or anyone in need and even feeding hungry animals are all meritorious deeds.

8. Making offerings to *devas* is just another category. The mechanism of how that works is hard to imagine for most people.

- I remember listening to a *desanā* by Waharaka Thero, where he mentioned that those food offerings can be used by higher *devas* to feed their underlings (there are different levels, just like in the human world). He mentioned that when people offer nice-smelling fruits etc, just after the offering, the aroma would be gone (if it is done right). That means the “essence” (*ojā*) of the food has been extracted.
- However, one does not need to offer large quantities. The higher *devas* can make the offering to “multiply” to feed many.
- I don’t want to get into that issue right now, since this is not a critical issue, and could bring out more questions than answers. There are many things about other realms (as well as about our own realm) that we do not fully understand.

9. Offering flowers, incense, etc do not belong to that “*dāna*” category discussed in #7 and #8 above.

- In Buddhist temples, such “offerings” are made to the Buddha.

- In reality, these “offerings of the second kind” setup the necessary background for the mind to grasp the Buddha Dhamma, and thus to lead to “*bhava uddha*” (stopping existences in any of the 31 realms), which is the real meaning of “Buddha”; see, “[A Buddhist or a Bhauddhaya?](#).”
- For example, those flowers symbolize the *anicca* nature. They are pretty when they offered, but in a couple of days they become wrinkled and eventually wither away. One is supposed not to admire the beauty of the flowers, but to contemplate on the *anicca* nature clearly displayed by the decay of those flowers; see, “[Anicca, Dukkha, Anatta.](#)”
- The incense offered emit an odor that conducive to meditation. Even though it is a pleasing odor, it is very different from those fragrances that one wears to a party, which has the tendency to encourage “seeking sense pleasures”.
- In other words, those fragrances worn to a party lead to sensual thoughts, whereas the smell of incenses is conducive to meditation, since it helps calm the mind.

10. Lighting of candles or oil lamps also provide a suitable background for meditation and contemplation. Light symbolizes wisdom.

- Comprehending Buddha Dhamma leads to the opening of the “*Dhamma* eye”, and enables one to “see the true nature of the world of 31 realms”, i.e., existence in any of those realms is NOT devoid of suffering.
- Furthermore, an oil lamp symbolizes the how the rebirth process is maintained by cravings. Just as oil keeps an oil lamp burning, cravings (*tanhā*) fuel the rebirth process.

11. Finally, the practice of paying respects to the Buddha using symbols representing him was started at the time of the Buddha. There are at least two accounts in the *Tipiṭaka* where the Buddha himself recommended this practice.

- First, in the *Mahāparinibbāna Sutta*, when it was getting close to the *Parinibbāna* (death) of the Buddha, Ven. Ananda asked him how people can pay respects to the Buddha after his *Parinibbāna*.
- The Buddha advised: “..*stūpās* should be made for the Buddha at the crossroads. People can offer flowers, incense, etc and pay respects, and that will be for their benefit and happiness”.
- Here is the relevant section: [WebLink: suttacentral: DN 16 Mahāparinibbāna Sutta \(29. Ānandapucchākathā\)](#), where it is stated: “..*Cātumahāpathe tathāgatassa thūpo kātabbo. Tattha ye mālaṃ vā gandhaṃ vā cuṇṇakaṃ vā āropessanti vā abhivādessanti vā cittaṃ vā pasādessanti tesam taṃ bhavissati dīgharattaṃ hitāya sukhāya.*”

12. There is another *sutta* which describes how planting of *Bodhi* trees was recommended by the Buddha himself too: When the Buddha was absent from *Jetavanārāma*, devotees naturally missed him, so Ven. Ananda, Buddha’s attendant, asked the Buddha what in his absence might be used to pay homage to him.

- The Buddha answered that bodily relics, things reminiscent of him and things that he had used, in particular the great *Bodhi* tree under which he had attained Enlightenment.
- Ven. Ananda then had a seed of the *Bodhi* Tree brought to *Jetavanārāma* and planted so that it would be, as the Buddha himself said, as if the Buddha were constantly present at *Jetavanārāma*.
- This account is in the [WebLink: suttacentral: Kālīṅgabodhi-jātaka](#); see the English translation: “[WebLink: suttacentral: Kalinga-Bodhi Jātaka.](#)”

The bottom line is that just like giving (*dāna*) or living a moral life, paying respects to the Buddha via any of those different ways cannot directly lead to *Nibbāna* (*magga phala*). But all of them can help set the background for one to get to the mindset that makes it easier to comprehend the deep *Dhamma* of the Buddha.

XIX About Author

Revised March 9, 2017; April 14, 2018; November 10, 2018; August 13, 2019

My name is Lal Ariyaratna Pinnaduwaage. I loved physics from the school days and became a physicist, and became a Senior Scientist at the Oak Ridge National Laboratory and a Research Professor at the University of Tennessee, Knoxville. I was elected a Fellow of the American Physical Society in 2004. Since retiring in 2009 at age 55, I have been on a quest to uncover the pure Dhamma of the Buddha.

Even though I am a Buddhist by birth, I did not really “practice” until I retired. Initially, it was to find out what “Buddhism” really was, and how it compared with other world religions.

- I provided the above description in keeping with my intention to be fully open. Also, I intend to make the website “as experienced” by myself. I will specifically mention what I have not experienced as such. I will record my progress in these web pages as much as advisable. (Not everybody will have the same kind of experiences related to *samādhi*, *jhāna*, or *magga phala*).
- What I have found is that Buddha Dhamma is different from not only other religions but also many forms of “Buddhism” that we have today. Other religious and cultural influences have contaminated even the Theravāda version.

In July 2013, I accidentally came to know about new interpretations of *anicca*, *dukkha*, *anatta* (true Nature of existence). It was “the main missing piece” for me. I will never forget the ecstatic feeling while listening to that fateful *desanā* from one Thero on July 30, 2013, on the internet. I made a trip to Sri Lanka and was able to get more information, even though I was not able to meet Venerable Waharaka Abhayaratanalankara Thero, who had uncovered the actual teachings. What I present here is this complete picture, with my input from my science background.

- Waharaka Thero passed away on February 9, 2017; see, “[Parinibbāna of Waharaka Thero](#).” A large number of his *desanās* available at “[waharaka.com](#)” (explore the top menu!). Unfortunately, those *desanās* are available only in the Sinhala language.
- As in science, here, I am going to treat Buddha Dhamma as a theory and explore whether it provides a consistent picture of our world. Buddha Dhamma is a complete worldview and its principles are the laws of Nature. Scientists have uncovered only a fraction of these laws, and only those about inert matter. But mind precedes matter.

I hope is that I can give you a taste of the exhilarating experience that I have enjoyed over the past several years in uncovering the pure Dhamma. Buddha Dhamma is indeed for those who seek to broaden their horizons. You will truly gain benefit from this site if you leave behind any preconceived ideas about “Buddhism.”

- Above all, I wanted to convey the truth of the fact that one CAN experience the “cooling down” or “*Nivana*” or “*Nibbāna*” at various levels as one LEARNS AND LIVES the pure Dhamma. That is not something to be attained in future lives but is something that one CAN experience in this very life by cleansing one’s mind. What I describe here is what I have experienced, to a large extend.
- Most people do not like to talk about their “spiritual experiences,” and that is understandable. But I think it could be beneficial to others if I describe my progress to get an idea of what to expect. A brief description of my progress is given in, “[10. Attaining the Sotāpanna Stage via Removing Ditthasava](#)” and the posts mentioned there. This will also provide a context for the material presented at this website. Please be aware that each person’s experience is different.
- Please ask your questions at the discussion forum; see below. If you have a questions of personal Nature, you can send it to me at: lal@puredhamma.net.

- Buddha Dhamma is a self-consistent description of the Nature's laws, and if there are any inconsistencies in these pages, they are due to my own mistakes and I should be able to correct them. I do revise these posts on a continuously as my own understanding improves.

The Buddha said, “*Sabba dānaṃ Dhamma dānaṃ jināti*”, or “Gift of Dhamma excels all other gifts.” Please inform others about this site if you benefit from it.

XX Quantum Mechanics and Dhamma

March 13, 2018

This section will discuss two issues:

1. **A new interpretation of quantum mechanics (QM) based on non-locality is presented based on Feynman's ideas.** Concepts like wave-particle duality, observer effect, are not needed. Furthermore, complex interpretations like the "Many-Worlds interpretation" are avoided. All existing experimental data will be shown to be consistent with this interpretation.
2. **A deeper understanding of how *kamma* automatically lead to corresponding *kamma vipāka* in Buddhism (Buddha Dhamma), becomes clear with this interpretation.**

o [Quantum Mechanics and Dhamma – Introduction](#)

o [Quantum Mechanics and Consciousness](#)

▪ [Will Quantum Mechanics Be Able to Explain Consciousness?](#)

▪ [The Observer Effect in Quantum Mechanics](#)

o [Quantum Mechanics – A New Interpretation](#)

• ["Exploring All Possible Paths" Leads to Fermat's Principle of Least Time](#)

20.1 Quantum Mechanics and Dhamma – Introduction

March 13, 2018; revised January 9, 2019; November 15, 2019; June 5, 2021; August 10, 2022

Introduction

1. This section will discuss two issues:
 - a. **A new interpretation of quantum mechanics (QM) based on non-locality is presented, where wave-particle duality is an incorrect and unnecessary assumption.** All existing experimental data are shown to be inter-consistent with this interpretation.
 - b. **This interpretation can lead to deeper insights into the relationship between *kamma* and *kamma vipāka* in Buddhism (Buddha Dhamma.)**

Relevant Work of Richard Feynman

2. I started working on this project to provide a new interpretation of quantum mechanics based on some new and exciting experimental observations within the past 20 years. I aim to provide a simple explanation with only a few mathematical equations. This work is an extension of the work of the late physicist Richard Feynman.

- To understand this material, one must have a high-school level physics background. Only those who have some background QM can follow the content here.
- **I would NOT recommend anyone to start learning QM to follow this section.** It is better to spend that time learning Buddha Dhamma. But of course, anyone may be able to get a general idea. Just read the first several posts and see.
- At the end of this project, I believe that a deep connection to Buddha Dhamma can be made, especially regarding how *kamma vipāka* materializes naturally due to one's *kamma*.

Going “Against the Grain” of Scientific Consensus

3. When I started working on this project over two years ago, I had conversations with Professor Gayanath Fernando. We tried to get a paper published on the proposed interpretation of QM. However, we were unable to convince the reviewers, and the article did not get published. I am attaching the pdf of the last version here: “[WebLink: PDF file download: A Self Consistent Interpretation of Quantum Mechanics Based on Nonlocality.](#)”

- But it got rejected from several journals because physicists refuse to believe that the “light speed barrier” can be broken: Einstein’s relativity theory says nothing can propagate faster than light.
- Our point is that nothing actually “travels” between the two “connected electrons.” They are intrinsically connected.
- However, it is ironic that the nonlocality of Nature was firmly established in 2015, as we discussed in the above paper.

Fundamental Ideas

4. Let me try to give the gist of the mechanism: There are techniques to create two electrons simultaneously with two opposing spins (say A with spin up and B with spin down). Then they can be sent even to opposite ends across the universe and remain “entangled.”

- What does it mean that A and B remain “entangled” even when separated by great distances? That means if the A’s spin flips, then B’s will flip **AT THE SAME TIME**. It is as if they can instantly interact across the universe.

- The basic idea is that the two electrons will stay “connected” no matter how far apart. This idea is called “non-locality.” An external website provides a good introduction: “[WebLink: physicsoftheuniverse.com: Nonlocality and Entanglement](http://physicsoftheuniverse.com/Nonlocality%20and%20Entanglement).”
- More information on the basic idea at: “[Quantum Entanglement – We Are All Connected](#).”

Kammic Influences Have No Space Limitations

5. I want to develop this idea to show that *kammic* energy has instantaneous influence across the universe. If particles have this “connectedness” in Nature, extending it to the mental realm is natural.

- The bridge is the *kammic* energy (also called *viññāṇa*). We create these energies in our minds with *javana citta*. That is a subject matter in *Abhidhamma*; see, “[Nāma & Rūpa to Nāmarūpa](#).”

6. In this section, I will discuss the implications of this new interpretation of QM for Buddha Dhamma and try to provide some key ideas. A key issue that keeps coming up in the discussion forum is what intention in *kamma* is and how Nature “knows” the connection of the person committing the *kamma* to the person affected by that *kamma*.

- For example, consider person X, who was adopted and brought up by foster parents soon after birth and is unaware he is adopted. Suppose X kills his biological father later on, of course, without knowing that it was his father. It is still an *ānantariya kamma*. Since Nature automatically manages *kamma/kamma vipāka*, how would Nature know the connection between those two people?

Confirmation From Recent Experiments In QM

7. That is the crucial question we may get some clues from QM. Nonlocality is a key feature of the proposed interpretation of QM. I will explain what is meant by nonlocality in future posts (see also, “[Quantum Entanglement – We Are All Connected](#)”). Nonlocality of Nature automatically enforces *kamma/kamma vipāka*.

- Of course, the Buddha had not mentioned this mechanism because, at that time, it was impossible to explain concepts like quantum entanglement.
- Furthermore, it is not necessary to know such details. But since we are at a point in making this connection, it is better to do so. That could help build confidence in Buddha Dhamma.

8. I plan to write several posts in this section laying out the basic ideas and welcome comments from knowledgeable readers familiar with quantum mechanics concepts. I have opened a new forum entitled “[Quantum Mechanics – A New Interpretation](#)” at the discussion forum to discuss each published post.

- Anyone will be able to read these posts and also the posts in the discussion forum. However, one needs to register at the discussion forum to ask questions or make comments. Forum registration instructions at “[WebLink: General Information and Updates](#).”
- Now, let us discuss the key idea briefly behind the proposed connection of *kamma vipāka* to QM.

The Intention in *Kamma* – Connection to Quantum Mechanics

1. Two key steps are relevant in evaluating how to assess a *kamma vipāka*:

- Which of the *dasa akusala* is the intention? For example, it could be taking a life, stealing, harsh speech, etc. Who is affected is not involved in this step. The “*cetana*” in “*cetana haṃ bhikkhave kammaṃ vadāmi*,” is just which *dasa akusala* (and associated *cetasika*) are in one’s mind when one is committing that *kamma*. That is all.

- ii. Then the **strength of the *kammā vipāka* is based on the “level of consciousness” or “moral qualities” of the living beings affected** by that *kammā*. For example, killing a human will bring stronger *kamma vipāka* than killing an animal. In the same way, giving to an *Arahant* will be much more worthy than giving to an average human.

That is the best way to analyze any given situation.

2. In another example, in the recent discourse on *Tilakkhaṇa*, I discussed the case of a person killing a bunch of people with a bomb; see Discourse 2 in [“Three Marks of Existence – English Discourses.”](#)

- His intention (*cetanā*) was to kill. Thus the *dasa akusala* involved is “*pānatipātā*,” that of taking a life.
- Now to the second step. That person may not even know who was killed. By some coincidence, if the bomb killed one of the killer’s parents, he would have done a *ānantariya pāpa kammā*. If an *Arahant* was killed, the same. If a *Sotāpanna* were killed, it would not be a *ānantariya kammā*, but still equivalent to killing thousands of normal humans.
- So, it is important to understand that “*cetanā*” is which of *dasa akusala* are in one’s mind when a *kamma* is committed. It could be more than one. In the case of the bomber, there is *micchā diṭṭhi*, and likely greed also, in addition to “*pānatipātā*.”
- One can analyze various situations with the above two steps.

3. We know that there are five *ānantariya kammā*. Those are so grave that one will be subjected to their *vipākain* the very next life in the *niraya* (lowest realm.) They are, killing one’s mother, killing one’s father, killing an *Arahant*, injuring a Buddha, and causing a schism in the *Saṅgha* (which really means trying to propagate a wrong version of the Buddha Dhamma).

- Since killing an average human is not a *ānantariya kammā*, it is clear that the “strength of the *kammā*” depends on who got killed.
- *Kamma vipāka* for committing any other offense is similar. Hurting an *Arahant* would be a million-fold stronger *kamma* than hurting an average human. Thus, logically, beating an *Anāgāmi*, a *Sakadāgāmi*, or a *Sotāpanna* would have corresponding levels of consequences.
- The “value of a life” depends on the “mental status” of that life-form. Any life is not the same. It is impossible to compare the value of an animal’s life with that of a human. There are huge variations among animals, and we can easily see that a gorilla or a dog is “more sentient” than a worm.
- However, we must remember that we all were born lowly-worm. So even though we need to keep in mind that there is a variation, we should never take the life of ANY sentient being intentionally (unnecessarily).

4. Regarding the issue of “how would one know” the status of the living person affected by one’s actions, that does not matter. “Nature” would know.

- This point of “we are all inter-connected” is now proven by quantum mechanics: [“Quantum Entanglement – We Are All Connected.”](#)
- That is a key factor in understanding *kammā/vipāka*. The proposed interpretation of QM can show this at an even deeper level.

5. The above discussion is a part of the post, [“Details of Kamma – Intention, Who Is Affected, Kamma Patha.”](#) You may want to read that to get more information.

- Another relevant post is, [“What is Kamma? – Is Everything Determined by Kamma?”](#)

6. We will start a discussion on QM with the next post. These days there is so much confusion about whether a photon is a particle or a wave, i.e., “wave-particle duality” in QM. I will address the issue of wave-particle duality in the next few posts.

- We will define what is meant by a wave and what is meant by a particle. Furthermore, many people confuse a “wave function” with a “wave.” A wave function is a mathematical concept that can REPRESENT the motion of a particle; it is not a wave.
- We will show that a photon is a particle, not a wave. It does not have dual Nature (particle and wave Nature), even though a wave function can represent it.

As I always say, one needs to know (or define) such fundamental entities before tackling more in-depth issues. Otherwise, we will get bogged down in redefining what a particular word means in the middle of a discussion.

20.2 Quantum Mechanics and Consciousness

March 20, 2018

[Will Quantum Mechanics Be Able to Explain Consciousness?](#)

[The Observer Effect in Quantum Mechanics](#)

20.2.1 Will Quantum Mechanics Be Able to Explain Consciousness?

March 20, 2018; revised March 12, 2021; April 18, 2022

Quantum Mechanics and Consciousness Are Both “Mysterious”

1. Quantum mechanics (QM) has some features (quantum entanglement, Heisenberg uncertainty principle, etc.) **that make it appear “mysterious”** compared to classical physics, where the predictions are intuitive and transparently deterministic.

- The “hard problem in consciousness” (discussed in philosophy) is also mysterious, just like quantum phenomena: **the question of how consciousness can arise in a brain made of inert matter.**
- When quantum mechanics emerged in the early 1900s, many people started tying the two together and speculating that the newfound quantum theory would explain how consciousness arises in the brain.

Attempts to “Explain” the Origin of Consciousness With Quantum Mechanics

2. There have been several such QM-based theories proposed to explain consciousness.

- Several popular books recently published emphasize the possible role of QM in generating human consciousness (Walker, 2000; Penrose et al., 2011; Rosenblum and Kuttner, 2011; Stapp, H., 2011).
- A recent review paper: “[WebLink: PDF File: Neural correlates of consciousness- Koch et al.- 2016.](#)”
- Another proposed approach, for example, is based on consciousness originating in microtubules in neurons: “[WebLink: PDF File: Consciousness in the universe – Hameroff, and Penrose-2014.](#)”
- However, those are just unverified “theories.” They will NEVER be proven to be correct. The Buddha explained that the mind is the precursor to everything in this world. **Nothing in the brain can give rise to consciousness.** See, “[Origin of Life.](#)”

Philosophers Are Starting to Realize

3. Other than such activities in science, a hot topic in current philosophy is “how consciousness arises in a material brain.” Most philosophers are physicalists and believe that a physical (matter) basis can explain all phenomena. For a collection of discussions with several philosophers, see (Blackmore, 2005).

- As David Chalmers pointed out in 1994 at the first Tucson conference on consciousness: “The hard problem...is the question of how physical processes in the brain give rise to subjective experience” (Chalmers, 1995).
- The problem in philosophy (and in science) then is to figure out how the “subjective” consciousness arises from “objective” matter. **That is an impossibility.**

4. This critical bottleneck was also emphasized by Thomas Nagel (Nagel, 1974) even earlier in his famous essay, “[WebLink: PDF File: What Is It Like to Be a Bat- Nagel- 1974](#)”. As he pointed out at the end of the paper, “...it seems unlikely that any physical theory of mind can be contemplated until more thought has been given to the general problem of subjective and objective. Otherwise, we cannot even pose the mind-body problem without sidestepping it”.

- The difference between “subjective” and “objective” is becoming clear with the neuroscience research done, especially in the past decade. We will discuss those new developments below. Subjectivity plays a vital role in cognition (consciousness), and the question is how that can arise from an “objective” material base.

Subjective versus Objective: Difference between Mind and Matter

5. To clearly state the issue we intend to address, we need to clarify the distinction between “objective” and “subjective.”

- **Objective means one's personal opinions and biases do not come into play.** It is easy to be objective about the physical properties of matter: We all agree what the length, weight, density, color, etc., of a given object, is. We have developed standard procedures for measuring them. Therefore, no matter who makes the measurement, the same answer will result.
- Thus we all agree (unless one is color blind) that a particular rose is red; that is also objective.

What Is Subjective?

6. **Then, what is subjective? Those are personal opinions that can vary from person to person.**

- For example, if you ask the opinion about politician X, some will love him, some will hate him, and others will be somewhere in between.
- The same is true about politics, religions, foods, smells, books, movies, etc. All those are subjective.
- In Buddha Dhamma, those subjective opinions arise because different people have different “*gati*”; see, [“The Law of Attraction, Habits, Character \(Gati\), and Cravings \(Āsavas\).”](#)

Science Is Based on Objective Assessments

7. We have a thriving science and technology field because we deal objectively (and thus rationally) with the inert matter in such cases. Therefore, we can lay out an experiment in detail and then carry it out anywhere by any team of competent scientists who design and carry out experiments objectively. They will get the same result (within experimental uncertainties).

- Science and technology would not flourish if such experiments did not produce consistent and repeatable results.

8. Science is focused on “material phenomena” involving inert matter. Scientists can send a rocket to the Moon. That only involves the motion of objects that strictly follow the laws of motion. Therefore, it is clear that objective assessments are much more straightforward than subjective assessments.

- By definition, we all cannot agree on something subjective. We place different values on things and have different opinions based on our value systems.
- One would think that it should be easy for science to figure out how objective assessments may take place in our brains. But even that is more complex than we would think.

The Mystery of Consciousness

9. For example, neuroscience cannot explain how our brains even discern a rose as “red,” i.e., how inert neurons can give rise to an “experience” even if it is objective. Explaining subjective experiences is much more challenging.

- This root problem, even in handling such essential aspects of “qualia,” has been pointed out by several philosophers and scientists over the years; see, for example, Noe and Thompson (2004), Bitbol (2008), Miller (2014), Aru and Bachmann (2015), and references therein.

- As these authors point out, currently, efforts are focused on investigating just *neural correlations* of consciousness. But finding a *neural constitution* of consciousness (how consciousness arises) appears impossible (and it is!).
- It is impossible because consciousness is not in the physical body. It is in the mental body (*gandhabba*); see, “[Ghost in the Machine – Synonym for the Manomaya Kāya?](#).”

How Does Consciousness Arise?

10. Can an inert brain identify a color? How can a brain feel pain? **Those are critical problems.**

- Furthermore, “the actual problem of consciousness” is much more complex because the *feeling* that arises upon seeing a red-color object can be different for different people; some like red clothes to wear, for example, and some don’t.
- **Thus, those feelings and perceptions arise due to a sensory experience that is truly subjective.** Material phenomena are , by definition, objective.
- Until recently, neuroscience had not been able to recognize the existence of mental attributes such as emotions, feelings, and perceptions. The availability of precision neuro-imaging methods has enabled an explosion of activity in those areas basically within the past decade; see, for example (Lindquist and Barrett, 2012; Bird and Viding, 2014; Klasen et al., 2014; Lamm and Majdandzic, 2015). However, these studies can point out only *neural correlates* (not *neural constitution*) of these mental qualities.

Subjective Experiences Are Impossible to Explain With Modern Science

11. Therefore, even if we solve the “hard problem” associated with discerning fundamental aspects of “qualia” (such as experiencing “redness of a rose”), that will still not solve the problem of the “subjective experience.” *The neurons in each person’s brain must have their own set of unique “characteristics” to provide the “subjective experience.”* Yet, neurons are neurons. How can person X’s neurons be different from those of person Y?

- Thus the difference between mind and matter is much deeper than just “qualia” (redness of a rose). Emotions that arise in the mind (happiness, sadness, greediness, hatefulness, jealousy, etc.) are complex and personal. The mind is complex.
- The problem in trying to explain the mind phenomena with inert neurons in the brain has its root in trying to explain complex “subjective mental phenomena” with an ontologically different “objective” material base (neurons).
- The Buddha has explained that those feelings arise not in the physical body but the mental body (*gandhabba*).; see “[Mental Body – Gandhabba](#).”

12. In any case, we are focusing on even a narrower aspect in this paper, i.e., the role of quantum mechanics.

- There is no evidence for a correlation between the mind and quantum phenomena, let alone a causal connection.
- Results of QM experiments do not depend on the “subjectivity” of the person conducting those experiments simply because truly subjective decisions are not involved in such experiments.

13. Subjective decisions are very personalized, like voting liberal versus conservative, buying versus selling a given stock, OR liking versus disliking a given food—zillions of such choices that are truly subjective.

- **Quantum mechanical experiments do not involve such subjective decisions, and the outcome is the same regardless of the experimenter. In science, the reproducibility of experimental results is the final arbiter. Quantum mechanical measurements are reproducible.**

- That is the key to realizing that quantum phenomena have nothing to do with the mind. Quantum phenomena may be different than “classical phenomena,” but they are reproducible.

Both Classical and Quantum Phenomena Are Objective and Deterministic

14. Transparently, “deterministic” classical physics (Newtonian mechanics) did not come even close to explaining the “subjective” consciousness. But the emergence of QM with its “unusual aspects” immediately led many to infer that it may be able to explain the equally “mysterious” consciousness.

- Since the 1920s, attempts have been made to rationalize the “unusual” nature of QM and ideas emerged from the physics community itself that conscious observations could affect the outcomes of an experiment (e.g., the “observer effect”); see [“The ‘Observer Effect’ in Quantum Mechanics.”](#) Recently, such ideas have been adopted to explain the origin of consciousness itself.
- We will summarize the existing experimental results in future posts to show that there is no evidence to suggest that quantum mechanical phenomena are even related to consciousness, let alone explain consciousness.

15. Quantum phenomena have characteristics that are very different from classical phenomena (described by Newtonian mechanics). **Still, both quantum and classical phenomena are objective.** There is no evidence of quantum phenomena having anything to do with subjective consciousness.

- The phrase “non-deterministic” (or “indeterminacy”) for quantum phenomena is a misleading one. It gives the impression that the results of QM experiments cannot be pre-determined. That is false.
- Even though many “classical experiments” have just one outcome, that is not true in all cases. For example, in chaos theory, one can calculate only probabilities.
- Similarly, in QM experiments, one can calculate only probabilities, but those predictions are ALWAYS consistent with experimental measurements. **Therefore, it is misleading to label QM phenomena as “non-deterministic.”**

All QM Experiments Are Objective

16. All QM experiments conducted have been objective. Subjective consciousness does not play any role in those experiments. A given QM experiment may yield different results based on the experimental conditions.

- There is no “intrinsic subjectivity” in those experiments other than the possibility of a range of outcomes (with known probability) due to the Heisenberg uncertainty principle.
- An experiment conducted under the same conditions will yield the same result is obtained regardless of the experimenter—no connection to the observer’s consciousness. Many try to use the famous double-slit experiment to show such a connection, but that is incorrect. See, [“The Double Slit Experiment – Correlation between Mind and Matter?”](#)
- We will continue this discussion in the next post, [“The Observer Effect in Quantum Mechanics.”](#)

We can discuss any questions on these posts on QM at the discussion forum: [“Quantum Mechanics – A New Interpretation.”](#)

20.2.2 The Observer Effect in Quantum Mechanics

March 20, 2018; revised April 20, 2022; March 25, 2023

1. The “observer effect” — sometimes called the “measurement problem”— in quantum mechanics is the problem of how (or *whether*) wave function collapse occurs. But the whole point is that there is no need for a “wave function collapse,” as we explain in this post.

- Let us start with what is meant by “wave function collapse.” It is always good to start with the basics.
- Please read the previous post, “[Will Quantum Mechanics Be Able to Explain Consciousness?](#)”, including the section on “[Subjective versus Objective: Difference between Mind and Matter.](#)”

2. The wave function in quantum mechanics evolves deterministically according to the Schrödinger equation as a linear superposition of different states. But actual measurements always find the physical system in a definite, well-defined state. Therefore, at the time of the measurement all those multiple states should collapse to just one (the observed).

- This is known as the “observer effect” since an observer is needed to make a measurement (and thus “cause a collapse”).

3. Even if such an “observer effect” exists, just the mere decision to make a measurement does not make such a measurement “subjective” in terms that we defined the term “subjective” in the post, “Will Quantum Mechanics Be Able to Explain Consciousness?”.

- There is no “measurement problem” because an observer’s “personal” mental state does not play a role.
- In these quantum systems one can calculate only the probability of a given outcome. If one carries out a large number of measurements, that outcome will be consistent with that prediction.
- That is quite similar to throwing a dice. We can only say that it will land on “5” about 1 out of six throws since the dice has six faces.
- **Anyone can initiate such measurements and will get the same result. Furthermore, a given experiment can be run by a computer program, and a conscious observer is not needed.**

4. This controversy over an “observer effect” arises in the first place because of the assumption that the wave function is “ontic”, i.e., it has all the correct information about the particle in it.

- But this assumption has been rejected by Einstein and many others including Bell: “..Either the wavefunction, as given by the Schrodinger equation is not everything, or it is not right.” (Bell, 1987, p. 201).

5. **Furthermore, this requirement to “collapse the wave function” or the involvement of an “observer” is absent in Bohmian mechanics**, a version of quantum theory discovered by Louis de Broglie in 1927 and rediscovered by David Bohm in 1952 (Bohm, 1952).

- In Bohmian mechanics a system of particles is described in part by its wave function, evolving, as usual, according to Schrödinger’s equation. **But a complete description is provided by specifying the actual positions of particles by a “pilot wave” or a “guiding wave.” Bohmian mechanics track the trajectory of a particle in real-time and there is no need for a “wave function collapse.”**

6. A key experiment that led to the concept of an “observer effect” is the famous “double-slit experiment.”

- However, in recent double-slit experiments (Kocsis et al., 2011; Schleich et al., 2013b) monitored individual trajectories of particles, and any possibility of a “mind effect” or “observer effect” was ruled out.
- Their results were consistent with the trajectories of individual particles calculated with Bohmian mechanics.

7. Bohmian mechanics naturally describes all possible paths. Each one can be assigned a probability, and experimental outcomes agree with those probabilities.

- **So, the measurements are deterministic in the following way. The outcome is compatible with the predictions in a series of measurements.** Those measurements are objective.
- A detailed description of Bohmian mechanics is in (Durr, Goldstein, and Zanghi, 1992).
- The following video provides a good model of the Bohmian mechanics (thanks to Dosakkhayo for providing the link):

[WebLink: youtube: Is This What Quantum Mechanics Looks Like?](#)

8. Physicists have been slow to use Bohmian mechanics because it involves more work (solving the pilot wave equation), but there has been a renewed interest in recent years.

- We have done a literature survey on the Science Citation Index and found that interest in Bohmian mechanics seems to have accelerated around the turn of the century. The total number of publications from 1992 to 1999 was 52. From 2000-2005, 2006-2011, and 2012-2017 had 134, 174, and 200 papers published. Thus, even though it took time to gain traction, Bohmian mechanics now seems to be attracting attention.

9. Furthermore, a series of recent papers have illustrated the beautiful connection between classical mechanics and quantum mechanics; see, for example, (Field, 2011; Taylor, 2003, Hanc et al., 2003), which was initially pointed out by Feynman (Feynman, 1948).

- **These and other papers show how the “sum over all possible paths” by Feynman in quantum mechanics (Feynman, 1948) converges to the “path of least action” in classical mechanics at the limit h (Planck’s constant) approaching zero.** Thus classical mechanics is just a limiting case of quantum mechanics.

10. Others have described how Schrödinger’s equation comes out naturally from classical mechanics (de Gosson and Hiley, 2011; Field, 2011; Schleich et al., 2013a).

- The so-called “quantum weirdness” arises due to the effects of the Heisenberg uncertainty principle, which becomes non-negligible when “ h ” in the equation is non-negligible in the microscopic realm.

11. **Therefore, there is no connection to human consciousness in QM experiments.** Quantum mechanical experiments always provide consistent results that are not subject to or even related to the “conscious state” of the observer.

- The need for a “personal” or subjective conscious mind is not even needed. A computer program may randomly decide when to initiate/terminate a measurement and get the same result.

Quantum Phenomena May Be “Weird” but Nothing to Do with the Mind

Quantum phenomena, just like some phenomena in relativity, seem “unusual” to us since they were uncovered only in 1900, and are not of common occurrence. But they all involve the behavior of inert matter at a small scale (quantum phenomena), and speeds approaching the speed of light (relativity). This unusual behavior has nothing to do with human consciousness; that is how Nature works in the microscopic realm.

1. Two issues need to be separated:

- (i). Do quantum phenomena display characteristics that are very different from phenomena displayed by classical (Newtonian) systems?
- (ii). Do quantum phenomena provide any evidence that they are related to mental phenomena (i.e., are they affected by the particular state of mind of the experimenter?).

2. The answer to (i) above is unequivocal “yes”. The experiments discussed below have characteristics that are alien to the phenomena displayed by Newtonian or classical systems.

- **However, QM is not alone in that respect.** The two theories of relativity also apply to phenomena that are not compatible with classical phenomena: time dilation and length contraction are prominent examples.

3. In both relativity and QM, the **observer’s mental state does not play a role.**

- For example, relativity predicts that if a person takes off in a rocket, travels at speeds close to the speed of light for an extended time, and returns, he will find that those on Earth have aged much more than him. That is called time dilation.
- However, if two people travel at similar speeds for a specific time and come back, the time dilation experienced by both will be the same.
- In the same way, if two different people conduct any of those “weird” QM experiments, they will get the same result.

4. In both cases of QM and relativity, the results may be “weird” by classical standards. However, there is no involvement of the “consciousness of the observer.” The “apparent weirdness” in QM goes away smoothly as the Planck’s constant (h) becomes negligibly tiny (and in relativity when the speed is low).

- There is no “mind effect” or “observer effect” in that the observer’s subjectivity affects the results of either type of experiment,. **There are no subjective decisions to be made during an experiment.**
- By definition, result of an experiment is not reproducible unless an experimenter is genuinely objective.

5. In other words, all quantum phenomena and those explained by the relativity are objective, just like classical phenomena.

- **On the other hand, mind phenomena CAN BE subjective.** As discussed earlier, when describing the physical properties of matter, two people can be objective, i.e., they report the same length, weight, etc., for the object. But their PERCEPTION of a given person X, or a given food or music, etc., could be very different. Those are subjective.
- For example, consider two people with opposing political views (A and B). Each runs into a politician C with views compatible with A’s. Person A will be happy to meet C and may go up to C, shake his hands and talk to him enthusiastically. On the other hand, Person B will automatically have irritable thoughts about C and is likely to avoid C.
- What properties of neurons in A and B could lead to such a vast difference in feelings and intentions (consciousness) upon seeing the same person?
- Such subjective mental states do not play a role in carrying out experiments, whether quantum or classical. But they do play critical roles in making decisions in everyday life.

6. Therefore, those two issues need to be handled separately. Quantum phenomena have characteristics that are very different from classical phenomena, but both quantum and classical phenomena are objective. There is no evidence of quantum phenomena having anything to do with subjective consciousness.

- The crucial distinction that we need to realize here is that the phrase “non-deterministic” as applied to such QM experiments is incorrect. For example, some measurements may not provide the exact location of a particle. There could be many possible locations for that particle, but they can all be accurately predicted with associated probabilities.
- Those experiments have no “intrinsic subjectivity” other than the indeterminacy depicted by the Heisenberg uncertainty principle. The same investigation conducted under the same conditions will yield the same result. It does not matter who experiments, i.e., the experimenter’s consciousness does not play a role.

20.3 **Quantum Mechanics – A New Interpretation****March 13, 2018; revised December 8, 2020**

1. A new interpretation of quantum mechanics (QM) based on nonlocality and realism is presented, where wave-particle duality is shown to be an incorrect and unnecessary assumption.

- In our proposed interpretation, appropriate wave functions are established instantaneously across space per nonlocality.
- Nonlocality of Nature is hard for many to accept, but it is valid in three key experiments conducted in 2015.
- All existing experimental data, including those, are shown to be inter-consistent with this interpretation.

2. I will systematically expand the arguments given in the above paper (in #3 below) in a series of posts on the website. The following are the posts published so far. It would be helpful to read these posts first since they provide key ideas.

[What Is a Wave and What Is a Particle?](#)

[Photons Are Particles, Not Waves](#)

[Basis of the Proposed Interpretation – Feynman's Technique in QED](#)

- [Feynman's Glass Plate Experiment](#)
- [Feynman's Method of "A Particle Exploring All Possible Paths"](#)
- ["Exploring All Possible Paths" Leads to Fermat's Principle of Least Time](#)

It may be a good idea to read the following posts as well:

- [Will Quantum Mechanics Be Able to Explain Consciousness?](#)
- [The Observer Effect in Quantum Mechanics](#)

3. When I started working on this project over two years ago, I had conversations with Professor Gayanath Fernando. We tried to get a paper published on the proposed interpretation of QM.

- However, we were unable to convince the reviewers, and the paper did not get published. The pdf of a recent version can be downloaded here: "[WebLink: PDF File: A Self Consistent Interpretation of Quantum Mechanics Based on Nonlocality.](#)"
- The reviewers' main objection of the reviewers seemed to be the nonlocality argument, and some were reluctant to reject the "wave-particle duality." I will be discussing those and other issues in detail in this section.
- However, it is ironic that the non-locality of Nature was firmly established in 2015, as we discussed in the above paper.

4. I plan to write a series of posts in this section and welcome comments from knowledgeable readers who are familiar with concepts in quantum mechanics. I have opened a new forum entitled, "[Quantum Mechanics – A New Interpretation](#)" at the discussion forum in order to discuss each post that is published.

- Anyone will be able to read these posts and also the posts at the discussion forum. However, one needs to register at the forum to ask questions or make comments. Forum registration instructions can be found at, "[WebLink: General Information and Updates.](#)"
- Now, let us discuss briefly the key idea briefly behind the proposed connection of *kamma vipāka* to QM.

20.3.1 What Is a Wave and What Is a Particle?

March 13, 2018; revised April 18, 2020 (added video in #7); August 28, 2022

1. Waves involve the transport of energy without the transport of matter. When you drop a pebble onto a water reservoir, you can see the ripples move out. There is no water displacement from one place to another, but the disturbance moves out.

- Therefore, a **wave** can be described as a disturbance that travels through a medium, transporting energy from one location (its source) to another without transporting matter.
- On the other hand, a **particle** can move and transfer matter. The most important characteristic of a particle is that its position is localized at any given time and is detected as a single detection event or a "single click" on the detector. That means a "whole particle" arrived at the detector.
- Those are the ways waves and particles were expected to behave before the advent of quantum mechanics. But starting around 1900, our ideas about waves and particles became somewhat confusing due to many drastic changes that took place over many years.

2. The fundamental concepts in quantum mechanics (QM) were worked out roughly from 1900 to 1930. Andrew Whitaker gives a good description of the evolution of QM within this period and beyond in his book "Einstein, Bohr and the Quantum Dilemma" (second edition, 2006).

- That book describes how the keywords like waves, particles, and wave functions related to QM evolved. Some of the old — and unnecessary — concepts like "wave-particle duality" linger because of the impressions made at that time.
- Experiments carried out within the past 20-30 years (some key experiments within the past few years), show that such lingering ideas on "wave-particle duality" are an obstruction to grasping the reality revealed by QM.

3. For a long time, the light was thought to be a wave, specifically an electromagnetic wave. That idea still lingers on.

- Light consists of particles (photons.) That was firmly established only in 1986. See "[Photons Are Particles Not Waves](#)."
- **The most distinguishing characteristic of a particle is that its detection is recorded as a single event ("a click") at the detector.**

4. However, the motion of a particle — including a photon — can be represented by a wave function, which is a mathematical function, not a wave. **A wave function is extremely useful for calculating experimental results but does not have a physical reality.** Rather it **represents** the physical reality.

- It is easier to see the differences among the terms waves, particles, and wave functions by looking at what happens when waves and particles go through two adjoining slits.

5. When normal particles that we are familiar with go through two slits and fall on a screen to make their imprints, we will see two "line images," as shown on the left in the figure below. On the other hand, a wave (like a water wave) will give rise to "fringes," as shown on the right.

- In normal life, we will see particles (say marbles) going through two large slits leading to those marbles hitting the screen, as shown on the left
- With a water wave going through two slits, we will see ripples giving rise to water wave crests as shown on the right.

Those are the scenarios with normal particles and normal waves.

6. If quantum particles (like electrons or photons) are going through two slits where slit openings are LARGE (say a cm or more), then we will again see the “normal particle pattern” shown on the LEFT.

- **However, if quantum particles (like electrons or photons) are going through two slits where slit openings are SMALL (say less than an mm), then we will see the “wave pattern” shown on the RIGHT.** If the aperture dimensions are of the order of h/p (where h = Planck's constant and p is the particle's momentum), then such diffuse wave patterns can be expected.
- Those experimental results can be CALCULATED in such cases by using wave functions to represent the motion of such particles.
- However, a particle is never spread out. A given particle will always be detected at a certain point within that diffraction pattern. To get that diffraction pattern, one must repeat the experiment with a single particle many times.

7. **April 18, 2020:** Here is a youtube video that simply explains the above:

[WebLink: youtube: Electrons aren't actual waves](#)

We will discuss the above and the following related issues in detail in this section: “[Quantum Mechanics and Dhamma](#).”

Light is a Wave or a Particle?

8. Newton's concept of light consisting of particles prevailed for a long time in the early days. But Newton's corpuscular theory of light was abandoned around 1850 because it could not explain interference and diffraction phenomena Young and Fresnel showed that the wave picture could explain those experimental results.

- However, a wave needs a medium to support it. A “water wave” propagates in water, and a sound wave can propagate in a solid or a liquid and needs at least air to propagate. Still, light can travel in a vacuum, and therefore the existence of a yet unknown “aether” was proposed as the all-pervading medium through which light could propagate.
- The “ether theory” itself ran into several objections, and was finally abandoned after the famous Michelson–Morley experiment performed in 1887 conclusively proved the absence of an aether.

9. Now we know that light doesn't need a medium through which to travel. Furthermore, the speed of light is constant. It is independent of the movement of the source or detector or the direction in which it travels, as shown by Einstein's theory of relativity (discovered in 1905).

- Therefore, light is not a wave. This was confirmed by an experiment conducted with single photons in 1986, which we will discuss in the next post. I just wanted to present the background in this post.

Matter as Waves?

10. While the debate was going on about whether light is a wave or a particle between the 1850s to early 1900s, and even up to 1986 to some extent, another related development came with the early studies in quantum mechanics beginning around 1900.

- The issue was whether solid particles could be treated as waves.

11. After Planck, Einstein, Compton, and others established that light behaved as particles (photons), in 1913, Bohr came up with an idea to quantize the energy levels of a hydrogen atom. He was able to explain why discrete lines in the spectra of hydrogen.

- Yet another groundbreaking hypothesis by de Broglie in 1924 clarified why Bohr's idea worked. He proposed that just like photons can be represented by a wave (specifically with electromagnetic wave equations of Maxwell), a "wave can represent the motion of electrons." At that time, it was not clear what this "wave" would be. Now, we know that it is a wave function.

12. Light has been considered a wave for a long time, as discussed above. But the idea that waves could represent electrons with no-zero rest mass was unanticipated.

- Then in 1927, Davisson and Germer produced clear diffraction patterns for electron scattering from a nickel lattice, just like a diffraction pattern due to light. This led to the speculation that maybe particles sometimes behave as waves.
- That is how the idea of "wave-particle duality" evolved in the confusing period of 1900 to about 1930. Even though an accepted "quantum theory" was established around 1930, the idea of "wave-particle duality" lingers to the present.
- Nowadays, those diffraction patterns seen with electrons can be explained via the wave functions representing electrons' motion. However, a given electron can be found only at one location at a given time.

Heisenberg Uncertainty Principle

13. To make things even more complicated, in 1927 Heisenberg came up with his famous uncertainty principle. This principle says that the uncertainty of the position of a particle (σ_x) multiplied by the uncertainty of the particle's momentum (σ_p) must be larger than what is known as Planck's constant, \hbar :

$$\sigma_x \cdot \sigma_p \geq \hbar$$

- Planck's constant is extremely small; it has a value of about 10^{-34} Js.
- For any particle that we can see with our eyes, any uncertainty in the particle's position will be much smaller than the size of the particle. Therefore, we don't notice this in our normal lives.

14. However, when it comes to microscopic particles like electrons, the uncertainty in position is normally very large. If you have seen a pictorial representation of the orbit of an electron in a hydrogen atom, it is shown as an area; the electron could be anywhere within that area.

The following picture shows some examples of such electron orbitals. An electron could be anywhere within a given orbital at a given time.

- Therefore, the key point to remember is that the uncertainty in a particle's position and the momentum (or velocity) becomes significant only for small particles like electrons and photons.

15. We can make the following statements about the location of such a “quantum particle” at a given time.

- The significance of this uncertainty is that we cannot say precisely where such a small particle is to be found. We can only say that it should be located within a certain region. We can calculate the probability of finding it at a given point within that region.
- But that does not mean “the particle is spread out in that volume.” At any given time, the particle is located at only one point. It is just that we cannot say precisely at which point due to the uncertainty principle.

16. I hope you can see the difference. Some people make the grave mistake of saying a quantum particle is “spread over space” like a wave. That is a grave mistake and a key reason people have difficulty understanding quantum mechanics.

Any questions on these QM posts can be discussed at the discussion forum: [“Quantum Mechanics – A New Interpretation.”](#)

20.3.2 Photons Are Particles Not Waves

March 13, 2018; revised August 29, 2022

Summary: Photons are ALWAYS particles. They travel as particles and are detected as particles. But the position of a photon during travel cannot be pinned down to a point (due to the Heisenberg uncertainty principle; see, “What Is a Wave and What Is a Particle?”). Only POSSIBLE LOCATIONS of the photon at any time (and the probability of detection at each location) are provided by the wave function that represents the photon. The difference between a wave and a wave function was discussed in the previous post.

1. I must warn you that this post could be too advanced for many people. However, this is the sort of “deepest level” that we will go to in this section, and if one can at least comprehend the basic idea, then one should be able to follow the future posts. The basic idea that I am trying to express is that light consists of particles, called photons.

- What is meant by a “wave” in wave-particle duality is vague, and people interpret the term differently. Therefore, resolving what is meant by a “wave” in “wave-particle” duality is helpful. Is it a “real wave” like a water wave or is it a mathematical function?
- As shown below, it has been confirmed that photons are particles, and the word “wave” SHOULD NOT be used to describe light. But, the motion of a photon can be REPRESENTED by a wave function; it is a mathematical representation.

2. For example, a statement that is made frequently is, “..the position of a single particle is spread out over space...” **This is a misleading statement, and should never be used.** *A particle always occupies a localized position*; what is spread out is the wave function, indicating possible positions for the particle to be at a given time. See the summary statement above.

- A particle, whether an electron or a photon, is detected at a detector as a single detection event. When light — reduced to low intensity — is detected at a detector, those photons are registered as “single clicks”.

- **Therefore, we should give up the notion of light as a “wave”.** Light consists of photons; each photon may be represented by a wave function, which is a mathematical concept. This lingering and false idea of a “wave” is the main obstacle to having a unified theory of QM.

3. Newton believed that light consisted of particles. Newton’s corpuscular theory of light prevailed until around 1850 when it was abandoned because it could not explain light’s interference and diffraction effects. Since then, light has been regarded as a wave for a while.

- But starting around 1900 that wave picture could not account for many new experimental observations including the photoelectric effect, black-body radiation, and Compton scattering. Einstein proposed that light is quantized to explain the photoelectric effect (Einstein, 1905) — for which he received the Nobel Prize in physics in 1921 — and those quanta were given the name photon; they are the original “quanta” of quantum mechanics.
- Compton (Compton 1923) confirmed that a photon is a particle with momentum, for which he received the Nobel Prize in 1927.
- The photon concept has led to momentous advances in experimental and theoretical physics such as lasers, Bose–Einstein condensation, and quantum field theory.

4. Then, in 1948 Feynman illustrated that it is not necessary to consider photons as waves at all in quantum electrodynamics (Feynman, 1948; Feynman, 1949; Feynman, 1985).

- While the first two references above are technical papers, the third one is a book written in very simple terms. I would recommend those who are interested to read the book . I am only going to summarize what is in the book.
- That book was based on a series of 4 lectures. These are simple lectures delivered to non-physicists, and could be useful especially if one does not have access to the book:

[WebLink: YOUTUBE: QED: Photons — Corpuscles of Light — Richard Feynman \(1/4\)](#)

5. However, there was a persistent view up to 1986 that light could not be particles, and that many effects such as the photoelectric effect can be explained without the concept of a photon (Lamb and Scully, 1968; Crisp and Jaynes, 1969; Mandel, 1976).

- The final confirmation of a photon as a particle had to wait until single photon sources were developed. In 1986 Granger, Roger, and Aspect confirmed in their anticorrelation experiments that photons are indeed particles. We discuss this experiment below.

Proof That Photons Are Particles

The figure below shows the experimental configuration used by Granger, Roger, and Aspect to verify that photons are indeed particles (Granger, Roger, and Aspect, 1986).

1. Single photons generated at S are sent through a beam splitter, and a signal via each leg is detected at D_1 and D_2 . In this experiment, **one photon at a time** is incident on the beam splitter A.
 - If a photon is a particle, then it can be either reflected at A and go towards mirror M_1 , which will then be detected at detector D_1 , OR, it could go through A, reflected by mirror M_2 , and detected at detector D_2 . **Then a detection would register only at D_1 or D_2 .**
 - However, if the photon is a wave, it could partially propagate through each arm and be detected at **both D_1 and D_2 simultaneously**. That would count as a “coincidence count (N_c)”.
 - If a photon sometimes acts like a wave, there should be some coincidence counts.
2. The experiments confirmed that a given photon always takes one path at a time (Granger, Roger, and Aspect, 1986).
 - This experiment conclusively proved that a photon travels **either** via path A M_1 D_1 **or** path A M_2 D_2 .
 - If photons had the “wave nature”, there would have been at least some coincidence counts.
3. With this experimental confirmation, a photon is now categorized as an elementary particle. A photon at any wavelength is detected as a particle.
 - In Feynman’s Quantum Electrodynamics (QED), a photon is successfully treated as a particle that takes into account “all possible paths” via path integrals.
 - In our proposed theory, a photon is a particle, and its motion is governed by a mathematical wave function set up instantaneously across space taking into account the details of the experimental arrangement; this wave function explains interference and diffraction effects.
4. Newton’s corpuscular theory of light was abandoned around 1850 because it could not explain interference and diffraction phenomena.
 - However, when Feynman introduced his new approach to quantum mechanics in 1948, he proposed that, “..The probability that a particle will be found to have a path $x(t)$ lying somewhere within a region of space time is the square of a sum of contributions, one from each path in the region. The contribution from a single path is postulated to be an exponential whose (imaginary) phase is the classical action (in units of \hbar) for the path in question..” (Feynman, 1948, p. 367).

- Then he applied that concept to describe the propagation of photons and electrons in his formulation of quantum electrodynamics (QED); see (Feynman, 1949). The basic idea of photon propagation using “all possible paths available” has been explained by Feynman in his introductory book (Feynman, 1985) on QED.

5. Feynman explained his theory of QED with simple diagrams without equations in his book (Feynman, 1985). See “Basis of the Proposed Interpretation – Feynman’s Technique in QED.”

- However, his technique was completely ad hoc; there was no rationale behind it. As he explained (p. 10 of Feynman, 1985): “..what I am telling you is, while I am describing *how* Nature works, you won’t understand why Nature works that way. But you see, nobody understands that. I can’t explain why Nature behaves in this particular way”.
- With new experimental results published since then, we can now understand the rationale behind his technique. That is what we will be discussing in the first series of posts, and is also in the unpublished paper: “[WebLink: Docx File: A Self-Consistent Interpretation of Quantum Mechanics Based on Nonlocality.](#)”

6. Of course, many phenomena involving light can be explained with light treated as an electromagnetic (EM) wave, just like the motion of large particles can be treated with Newtonian mechanics.

- But when analyzing quantum phenomena, the EM theory does not work for light and the Newtonian mechanics does not work for microscopic particles. This is quite apparent in QED, which deals with the interactions of light with electrons.

Any questions on these QM posts can be discussed at the discussion forum: “[Quantum Mechanics – A New Interpretation.](#)”

20.3.3. Feynman's Glass Plate Experiment

1

March 16, 2018; revised March 25, 2018

1. Feynman's glass plate experiment that he discussed in pages 17 – 35 in his book (see the References below) is discussed in order to lay the foundation for our new interpretation of quantum mechanics (QM).

This is a key post that lays the foundation for the "nonlocality" argument. Even before I explain in detail what "nonlocality" is, I want to illustrate the simple fundamental idea behind it.

- **This idea is:** Even before a particle takes off, Nature evaluates all possible paths that particle could take, and come up "with a plan" for its motion. This happens AUTOMATICALLY and some "unconventional paths" could result only in the case of microscopic particles like electrons and photons.
- This is why quantum mechanics appear to reveal "strange phenomena". But when particles increase in size, this "unusual behavior" goes away naturally.
- This simple idea that the physicist Richard Feynman came up is best illustrated with a simple experiment that is discussed in his book (see the References below). That experimental setup and the key result is shown in the figure below.

Experiments show signal at D_R to vary from 0% to 16% as the thickness of glass plate varied.

One would expect constant reflection at about 8%.

2. There are two "special features" in this experiment (it could be easier to print the post and read):

- i. The two surfaces of the glass slab are well-polished and are parallel to each other with high accuracy.
- ii. The light is monochromatic, which means it has a well-defined wavelength.

3. Light from the source (S) is incident on a glass plate. Part of the light is reflected as indicated by the arrow labelled #1, and the rest is transmitted through the glass and incident on the second surface where a part of it

is reflected and goes back up as indicated by the arrow #2. Rest of light emerges from the other side of the glass plate indicated by the dotted arrow. Two more things to be noted:

- **What is plotted on the right side of the figure is the light signal in the reflected beams #1 and #2.**
- **Variable on the X-axis of that figure is the thickness of the glass plate (L).**

4. The first thing one would expect is to have a fraction of light (about 8%) to be reflected via path #1. In fact, that is what one WILL observe with normal light (with all wavelengths in the visible region).

- However, as we can see in the experimental data to the right in the figure, that reflected signal varies from 0% to 16% as the thickness of the glass plate is increased for light with a well-defined wavelength (like from a laser).
- **It is interesting to see that the reflected signal is zero (very low) at some thicknesses of the glass plate. This is a KEY feature that cannot be explained without our interpretation of QM. If anyone can, please post at the discussion forum.** Feynman explicitly said that he could not, on p. 10 of his book.

5. Normally, one would expect the light reflected from the front surface (#1) *to be at a constant level* since photons are particles, *i.e., a photon hitting the first surface would have no idea whether another interface existed below or not*. Again, this is the key to the puzzle.

- For an analogy, we can consider the following case. Imagine a wire fence with holes a bit larger than a ball that we throw at it. Some balls (those that align with the holes) will go through those holes and others will bounce back. Would it make any difference to the number of balls that bounce back if we install another fence a little bit beyond the first fence? Would it matter how far apart the fences are? Of course not.
- That is a reasonable analogy that shows how amazing the above observations — seen with the glass plate and the particles of light (photons) — are.
- But such effects are seen only in the microscopic realm, as we will discuss later.

6. The following is how Feynman devised a “rule” that turned out to be able to account for those observations in the figure above.

- For a photon to get to the detector D_R , there are two paths available via the glass plate (#1 and #2), as shown in the figure. **Feynman’s key assumption was that wave functions are established instantaneously via both those paths, and the vector sum of them would determine the possible path for a photon. These are not real waves, but just mathematical functions.**
- In quantum electrodynamics (QED), this procedure of “summing up all possible paths” is given the fancy name, “path integrals”.
- When the path difference between those two paths is equal to the wavelength of the light, those two contributions are cancelled out (there is a phase shift of 180° for the two paths in addition). That is why one sees zero intensity at plate thicknesses that are multiples of even number of half the wavelength.
- On the other hand, when the path difference between those two paths is equal to the half of the wavelength of the light, those two contributions add together. That is why one sees large intensity at plate thicknesses that are odd multiples of half the wavelength.
- Those are just technical details. Don’t worry about them if you are “non-technical”.

7. **As long as one uses monochromatic light (and glass with no defects), one could in principle make the width of the plate arbitrarily large and those oscillations in the signal in the above figure persist.** Thus as long as those two possible paths are available (without any defects in the glass plate), the resultant wave function will enforce “no reflection” at the front surface regardless of how thick the glass plate is.

- On p. 21 of his book (Feynman, 1985), Feynman says, “..Today, with lasers (which produce a very pure, monochromatic light), we can see this cycle still going strong after more than 100,000,000 repetitions — **which corresponds to glass that is more than 50 meters thick..**” This is an amazing observation!
8. Therefore, QM wave functions — which take into account the phases and amplitudes of all possible paths — *are established instantaneously*. **This is a consequence of the nonlocality of nature that we will discuss in detail in upcoming posts.**
- In the case of the above figure, there are two possible paths for a given photon — indicated by the arrows #1 and #2 — leading to D_R as shown in the figure. It is important to note that the path of a given photon leaving the source (S) is predetermined from the start.
 - Thus the question does not arise as to how the photon coming to the first surface “knows” that there is a second surface below it. There is no causality problem here, *since the QM wave function is established at the very beginning* because of the nonlocality of nature; if any changes are made to the experimental setup, the wave function will adjust *instantaneously*. **Nonlocality means exactly that: physical proximity is not needed for this mechanism to work.**
9. **Now we will discuss a critical implication of Feynman’s “a particle exploring all possible paths” or “path integral” approach, that even Feynman did not realize.**
- **What happens when we increase the thickness of the (defect-free) glass plate to a value that is greater than the distance from the glass plate to the detector D_R ?**
 - Now, a photon reflecting off of the front surface would have had time to reach the detector before another photon going through the glass plate even reaches the lower glass-air surface, and start coming back to the detector D_R via #2 path.
 - You need to take time and think about this. That is why it could be better to print the post and read. I don’t think the reviewers of our paper even realized this key point; see, bullet #3 of “[Quantum Mechanics and Dhamma – Introduction](#).”
10. **Therefore, in the absence of wave functions establishing instantaneously across both possible paths (and thus undergoing destructive interference), there CANNOT be a zero signal at the detector D_R , for ANY thickness of the glass plate if that thickness (L) is greater than the distance from the glass plate to the detector D_R .**
- This is the second aspect of the key observation that cannot be explained without our proposed interpretation of QM.
 - Again, please make comments at the discussion forum, if anyone can explain this observation in another way.
11. With the above observation, this experiment also confirms that photons are not waves, which we established in the post, “[Photons Are Particles Not Waves](#).” In principle, two waves coming off of the front and back surfaces of the glass plate COULD destructively interfere to yield the zero intensities at those plate thicknesses.
- However, in this particular case (thickness of the glass plate larger than the distance from the glass plate to the detector D_R), the “light wave” from the front surface would have arrived at the detector and be gone, by the time “light wave” from the back surface of the glass surface arrives at the detector.
 - Therefore, destructive interference at the detector cannot take place **in the case of real waves propagating at the speed of light**. What undergoes destructive interference are the **mathematical wave functions** representing a photon.
 - This is why it is important to distinguish between waves and wave functions; see, “[What Is a Wave and What Is a Particle?](#).”

12. Therefore, the zero intensity observed at some plate thicknesses is not due to the destructive interference of waves. Instead it is due to the combined contributions from those two paths (two wave functions).

- If the two wave functions destructively interfere, **then not even a single photon will be directed via either of those paths, and all incident photons will go through the glass slab.**
- If the two wave functions interfere constructively, then maximum possible number of photons will be directed via those paths, and maximum possible signal (16%) will be observed at D_R ; rest of the photons will go through the glass slab.

13. Therefore, it is very important to understand the difference between waves and wave functions. Light cannot be really called electromagnetic waves, even though the term is used even today. We have established that in the post, "[Photons Are Particles Not Waves](#)." I am proceeding slowly to establish a solid foundation, so that questions like this do not arise later on.

- Feynman's method says that even before a particle starts moving, **wave functions** for "all possible paths" for that particle are established instantaneously. The particle will then move along a path that results from the "summation over all those paths".
- These wave functions are vectors (i.e., they have a magnitude and a direction). Therefore, vector addition must be used in "summing up all possible paths". For those who are "non-technical" such details can be skipped; just get the idea.
- This vector addition using a simple method with arrows is described by Professor Feynman in his book and also in a series of four public lectures (see the References below).

14. To summarize the above discussion in another way, let me quote from Feynman's book (p.36):

- **"This strange phenomenon of partial reflection by two surfaces can be explained for intense light by a theory of waves, but the wave theory cannot explain how the detector makes equally loud clicks as the light gets dimmer. Quantum electrodynamics "resolves" this wave-particle duality by saying that light is made of particles, but the price of this great advancement of science is retreat by physics to the position of being able to calculate only the probability that a photon will hit a detector, without offering a good model of how it actually happens."**
- Our proposed theory shows exactly how it happens.

15. As we will discuss in the upcoming posts, we point out that Feynman's idea of a photon exploring all possible paths is none other than the enforcement of nonlocality; *Feynman's QED implicitly assumed nonlocality*.

- A wave function is instantaneously set up over all space taking into account the phases for all possible paths; there is no spatial limitation. This is why two particles across the universe could be still entangled; see, "[Quantum Entanglement – We Are All Connected](#)."
- In the next post we will show that in the above case, a photon will actually "explore ALL possible paths", an infinite number of them! However, only those two paths actually came into play in the above discussion, because all others cancel out at ALL TIMES.

Any questions on these QM posts can be discussed at the discussion forum: "[Quantum Mechanics – A New Interpretation](#)."

20.3.3. Feynman's Method of "A Particle Exploring All Possible Paths"

March 29, 2018

1. In the previous post we discussed Professor Feynman's illustration of how **two wave functions (not waves)** corresponding to two possible paths for a photon interfere (constructively and destructively) to produce an oscillating signal; see, "[Feynman's Glass Plate Experiment](#)."

- It was pointed out that this experimental result is not explainable if light is treated as an electromagnetic wave.
- More importantly, it showed that a path for a photon is mapped out instantaneously by Nature, as soon as the photon takes off.
- In this post, we will discuss his argument that the Nature actually takes into account **ALL possible paths, an infinite number of them!** This is our key idea behind "nonlocality", so we will proceed step-by-step to make our case crystal clear.

2. This discussion is also based on the following figure from Feynman's book (p 43); see the reference below. Light received at point P due to source S is considered; direct path from S to P is blocked by a screen placed in between them.

- Everyone is familiar with the "law of light reflection" where the light from from A goes to a Point B in a path that is defined by the angle incident being equal to the angle of reflection.

- Of course, the time for a photon to get from S to D is minimum close to the center of the mirror.
- However, Feynman showed that a better picture with more explanatory power is available with the concept of "a photon exploring all paths". He showed that most possible paths are cancelled out and only those paths that lie close to the expected path stated by the Law of Reflection contribute to the final detection probability.

3. In order to illustrate the concept of a photon “exploring all possible paths”, the mirror is divided into sections A through M, and reflection from each section of the mirror is indicated (see the above figure).

- Due to different distances of travel, the time taken for each path varies as shown in the middle figure, and correspondingly the phase varies as shown below that. The final amplitude is given by adding those arrows, and is indicated at the bottom of the figure.

4. Just like in adding the contributions from two “waves”, adding the contributions from “wave functions” requires one to take into account the difference in phase angle. Feynman has described this in simple terms, how to add contributions due to many wave functions using vector addition (see pp. 24-35).

- It is evident that the major contribution to the final arrow’s length is made by arrows E through I (from the central part of the mirror), whose directions are nearly the same because the timing of their paths is nearly the same. **This also happens to be where the total time is the least indicated by the heavy arrow, which is the expected path from the law of reflection.**
- The law of reflection, that we learn at high school, is a simple rule that works. But actually reflections from **each point in the mirror** contribute to the signal at P. It is just that most of those contributions cancel out (as shown by the bottom part of the above figure).

5. **To prove that even the edge of the mirror does contribute to the signal at P**, we chop off most of the mirror, leaving only the sections A, B, C on the left. From the above figure, if we add the three arrows due to those three sections, they nearly cancel out. This is why we do not see significant contributions from parts of the away from the center.

- If we now divide that section (of A,B,C in the above figure) into **four equal sections**, they of course again cancel out as shown in the top section of the figure below.

- **But if we now carefully scrape two alternating sections of those four sections (as shown in the bottom figure), then the signals due to the two reflecting sections add up to give an intense signal; see the bottom part of the above figure.**

6. This conclusively proves that during normal reflection, parts of the mirror away from the center also contribute to the signal. It is just that most of that signal is cancelled out. Thus, for all practical purposes, it is sufficient to just take the reflection from the center part of the mirror (i.e., to use the law of reflection in geometrical optics).

- However, If only the arrows in a particular direction are kept, while the others in opposite direction are removed (by etching the mirror in those places), then a substantial amount of light reflects from a piece of mirror located away from the center, as shown in #5 above.
- **That modified section of the mirror is of course now a diffraction grating.**

7. Feynman discusses several examples in his book, but let us discuss just one more example to illustrate the point that this method is consistent with the Principle of Causation.

- **Here we consider the case of refraction, which had led to causal issues with the “photon as a particle” idea of Newton and Fermat.**
- Those who are really interested can read in detail the historical evolution of ideas from Newton through Fermat to Feynman, in the book by Ivar Ekeland (see References below).

8. Figure below shows the refraction of light from a source (S) in the air to a detector (D) placed in water. As in the case of the mirror, we consider all possible paths from S to D, and map out the time taken for a photon to reach point D via “different sections” of the water surface.

- The observation of light taking the “time of least time” to reach a detector in the water by changing its path (called “refraction”) was explained by Fermat back in 1657, by taking into the account that light travels slower in water than in air; we will discuss this in the next post, “Exploring All Possible Paths” Leads to Fermat’s Principle of Least Time”.
- However, until Feynman came up with his method of “a particle exploring all possible paths”, this phenomenon could not be explained within the “particle picture”.

- Once again, most paths away from the optimum path are CANCELLED OUT. The major contributions come from those paths close to the expected arrow indicated by the heavy arrow, and the Fermat’s Principle of Least Time is recovered with this “particle representation”.

9. What bothered everyone (including Feynman) about Fermat’s idea is that it seemed to require agency. How could light *choose* a path? How could it possibly *know* which path was the fastest?

Here’s how Feynman puts it (Feynman Lectures, Vol. 1, Chapter 26):

“The principle of least time is a completely different philosophical principle about the way nature works. Instead of saying it is a causal thing, that when we do one thing, something else happens, and so on, it says this: we set up the situation, and light decides which is the shortest time, or the extreme

one, and chooses that path. But what does it do, how does it find out? Does it smell the nearby paths, and check them against each other? The answer is, yes, it does, in a way.“

- **The explanation is that Feynman method works because the Nature is nonlocal.** We will discuss this in detail in future posts.
- A link to Feynman Lectures is given in the References.

An Electron Will Also Explore All Possible Paths

As Feynman pointed out, everything we have discussed so far can be applied to the propagation and detection of electrons: Electrons also “explore all possible paths”, and these paths are determined by the experimental configuration.

- If the experimental configuration changes, those paths reconfigure instantaneously. Of course, quantum electrodynamics (QED) incorporates the possible trajectories of both electrons and photons.
- It is amazing to realize that physicists used Feynman’s version of QED for 70 years without realizing that the same needs to be applied to quantum phenomena like the “double-slit experiment”.

Conclusion

The key philosophical problem that existed for Newton to Fermat to Feynman with their “particle representation of light” was to explain how a photon would know in advance how to determine the path of least time.

- But that problem goes away when we realize that a photon (or any particle) takes into account “all possible paths” **dictated by the nonlocality of Nature.**
- We will discuss the nonlocality in detail in upcoming posts. I just wanted to provide the experimental evidence from the work of Professor Feynman first.

Any questions on these QM posts can be discussed at the discussion forum: [“Quantum Mechanics – A New Interpretation.”](#)

20.3.3. ³ “Exploring All Possible Paths” Leads to Fermat’s Principle of Least Time

April 1, 2018; revised June 22, 2021

Why Does Light Bend When Entering Water?

1. In 1657, the French lawyer and mathematician Pierre De Fermat (behind Fermat's Last Theorem) worked out that when light travels from one place to another, it always takes the path of least time. The path of a ray of light going from air to water shown below.

- There's a formula called Snell's law (shown in the figure) that correctly predicts the exact angle by which the light bends, depending on the materials it's traveling through and the angle at which it hits the surface.
- Fermat explained this observation of light taking the "time of least time" to reach a detector in the water by changing its path (called "refraction") by taking into account that light travels slower in water than in air.
- But the question of WHY it does that has not been answered up to now. Furthermore, how would a photon know there is an interface coming up ahead? As we saw in the post, "[Feynman's Method of A Particle Exploring All Possible Paths](#)," the wave theory of light cannot explain it.
- As we also saw in that post, Feynman came up with a technique called "a photon exploring all possible paths" but admitted that he did not know WHY it worked. In future posts, we will show that it is due to the nonlocality of Nature and the instantaneous establishment of quantum fields for "all possible paths" for the photon.

A Swimmer Does the Same as Light!

2. That is precisely the same procedure followed by a lifeguard (instinctively) in reaching a drowning swimmer in the water. The figure below illustrates the situation.

How to Find the Path of Least Time?

3. When we look at the above figure, at first glance, one may wonder whether a straight line (path A) is the fastest path. That is indeed the shortest one, but it isn't the quickest because one can run faster along the beach, and cover more distance on land than in water.

- However, if one runs on path B, making the distance in water minimum, that is also not the quickest. That route is too long, and it slows you down.
- The quickest path is C, a particular path that lies somewhere between A and B, where the lifeguard jumps in at a distance x before the shortest path in the water.
- **Of course, a lifeguard would not even think about all this. Instead he/she would instinctively choose a path that turns out to be close to this optimum path C.**

An Experiment on a Dog

4. I have not come across anyone experimenting on lifeguards and seeing how close they get to the "optimum path." But I came across a paper by a math professor who studied his dog fetching a ball thrown into Lake Michigan.

- He found out that his dog's path (over many measurements) came close to the "optimum path" predicted by Snell's law: "[WebLink: PDF File: Do Dogs Know Calculus- Pennings-2003.](#)"

5. After collecting 35 data points (the x and y values in the figure above, in meters), Professor Pennings plotted them. Along with these data points, he also drew the optimal trajectory predicted by Snell's law, shown by the straight line below (figure from the above paper).

- Therefore, just like a photon “would know” how to take the “path of least time,” a dog would too!

Ants Take the Path of Least Time Too!

6. Even more interestingly, even ants seem to find the “optimum path” that takes the least time to get to their food.

- A group of researchers used a glass surface and a rough green felt surface — analogous to air and water or sand and water in the above cases — to separate a colony of ants. They placed ant-food some distance into the rough green felt surface.
- They found that the ant trails were far closer to the quickest path than to the direct route. Like light and lifeguards, these ants seemed to minimize time and not distance. The following figure showing the trail of the ants is from their paper: [“WebLink: PDF File: Fermat’s Principle of Least Time Predicts Refraction of Ant Trails at Substrate Borders.”](#)

Conclusion

The critical philosophical problem that existed for Newton to Fermat to Feynman with their “particle representation of light” was to explain “how a photon would know” in advance how to determine the path of least time; see the book by Ivar Ekeland in the References.

- But that problem goes away when we realize that a photon (or any particle) takes into account “all possible paths” instantaneously due to the nonlocality of Nature. That is the basis of our new interpretation of quantum mechanics. We will discuss this in detail in upcoming posts.
- Interestingly, the observations that humans, dogs, and ants all taking the “path of least time” instinctively illustrate that this is how Nature works. **Even living beings are guided by this “nonlocality of Nature.”** This example illustrates that there is so much that we DO NOT KNOW about how Nature works.
- That is closely related to how Nature AUTOMATICALLY executes *kamma vipāka*. That will become more clear as we proceed. Also see, “[Quantum Entanglement – We Are All Connected.](#)”

We can discuss any questions on these QM posts at the discussion forum: “[Quantum Mechanics – A New Interpretation.](#)”

21.1 Parinibbāna of Waharaka Thero

March 9, 2017; Pictures of *dhātu* added June 10, 2017; Revised September 7, 2017; February 6, 2018; *desanā on jhāna/magga phala* added April 28, 2018; revised #4, #5 on July 18, 2020; new #7 on December 12, 2020; February 16, 2021; latest update on September 6, 2021; latest update on December 18, 2022 (#5); July 6, 2023 (#9)

1. It is with great sadness that I report the *Parinibbāna* of my Noble teacher, Waharaka Abhyaratanalankara Thero a month ago, on February 9, 2017.

- Even though he had not confirmed attaining *Arahanthood*, several years before passing away, he declared that he would not be reborn again. That means he would at least reach the *Antara Parinibbāna* state; see the video below.
- The *Antara Parinibbāna* state is reached when someone dies with three *saṃyojana* of *kāma rāga*, *rūpa rāga*, and *arūpa rāga* removed. (But without the removal of *māna*, *uddhacca*, and *avijjā saṃyojana*. Then one cannot grasp a new *bhava* in any of the 31 realms).
- The *gandhabba* would still survive the death of the body and come out and stay alive until the *kammic* energy for the human *bhava* is exhausted. Since a new *bhava* cannot be grasped, *anupadisesa Nibbāna* will occur. That is explained at the discussion forum “[Antara Parinibbāna](#)” and in the post, “[Gandhabba State – Evidence from Tipiṭaka](#).”
- From the accounts below, it appears that he did attain *Parinibbāna* (i.e., bypassed the *Antara Parinibbāna* state) at the dying moment.

2. When the news came out first, it was unclear whether the Thero had passed away or whether he was in *Nirodha Samāpatti*. Breathing stops while one is in *Nirodha Samāpatti*, but the body does not get cold. The body was warm for six days but started to get cold. Therefore, his death was not declared for six days.

- Even though I made trips to Sri Lanka in 2014 and 2015, I did not get an opportunity to meet him because he was not well.

3. He was the first person to extract the true meanings of many critical Pāli words in the *Tipiṭaka* in recent times— after hundreds of years.

- His *Paṭisambhidhā Ñāṇa* (the knowledge to extract the meanings of words) was at the same level as many renowned *Arahants* at the time of the Buddha.

4. As I discussed in the post, “[Four Conditions for Attaining Sotāpanna Magga/Phala](#),” one has to learn the correct Dhamma from a Buddha or a true disciple of the Buddha. He was able to bridge a gap that will

hopefully last until the end of the *Buddha Sāsana* (Ministry) of Buddha Gotama, i.e., for 2400 years from now for a total of 5000 years.

- I am grateful to his followers in Sri Lanka (Ven. Attidiye Sudheethadheera and others) who made recordings of thousands of hours of his *desanās* over the years. They have organized those recordings here: “[WebLink: waharaka.com: Waharaka Sadaham Desana](http://WebLink:waharaka.com:WaharakaSadahamDesana)” (updated September 11, 2017).
- Unfortunately, those are available only in the Sinhala language. I will try to convey these teachings in English on this website.
- I was able to meet Ven. Walasmulle Abhaya and Ven. Attidiye Sudheethadheera (both laypeople then) on a trip to Sri Lanka in early 2014 and 2015. They provided me with many *desanā* recordings before they became available online. I am also grateful to Dr. Neranga Abeysinghe, with whom I had many discussions. He also updated me on recent events of Waharaka Thero’s last days.
- Ven. Walasmulle Abhaya conducts regular *desanās* and meditation sessions. Recordings of those at: “[WebLink: Nirapekshathwayemaga](http://WebLink:Nirapekshathwayemaga).”
- **September 7, 2017:** I came to know about Ven. Rathupasketiye Vimukthirathana in Sri Lanka. His *desanas* (in Sinhala) at: “[WebLink: youtube: Ariya Asankathaya](http://WebLink:youtube:AriyaAsankathaya).”
- **August 15, 2019:** I have forgotten to add a link to a good set of English *desanas*: “[WebLink: youtube: Dharmayai Obai Sermons – English \(From 2017-07-30\)](http://WebLink:youtube:DharmayaiObaiSermons-English(From2017-07-30)).” I have not met this *Venerable*, but these *desanas* are based on Waharaka interpretations.
- **July 18, 2020: Cultivating *jhāna* is an excellent way to make progress on the Path.** However, initially, those *jhānā* are *anāriya* in nature. As one makes progress, they will be converted to *Ariya jhāna*. Some people may falsely believe that getting into *jhāna* necessarily means *magga phala*. Furthermore, even the first *Ariya jhāna* requires the REMOVAL of *kāma rāga*. See, “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#).”

5. **April 28, 2018:** Here is a *desanā* by Waharaka Thero where he presents clear evidence that *jhāna* is not necessary to attain *magga phala* (it is in the Sinhala language; listen to it around the 3-minute mark):

[WebLink: Download “Are Jhāna Required for Magga-Phala \(බේශන ජාන සමාධි \(කම්මකික, අරුණක උපමාව\)”](#)

- **However, cultivating *jhāna* is an excellent way to progress on the Path, even after (or especially after) getting to the *Sotāpanna* stage.**
- The main point Thero makes is that we know that there are *jāti Sotāpannas* born in the human realm. But if a *jhāna* were REQUIRED to attain the *Sotāpanna* stage, then that person WOULD NOT be born in the human realm, but in a *Brahma* realm corresponding to that *jhāna*.
- Furthermore, listening to the correct Buddha Dhamma or attaining *jhāna* does not make one a *Sotāpanna*. Devadatta listened to many discourses from the Buddha but could not attain the *Sotāpanna* stage of *Nibbāna*.
- The critical point is that without comprehending *Tilakkhaṇa*, just being able to get to *jhāna* is of no use. But one can use *jhāna* effectively to comprehend *Tilakkhaṇa*. **The best way to verify that one has attained *Ariya jhāna* is to check whether one has lost any desire for all sensory pleasures (including sex.)**

6. Last but not least, I must also express my gratitude to Ven. Meevanapalane Dhammalankara, who had been in close association with the Waharaka Thero. I first came across these correct interpretations when I came across one of his *desanās* on the internet on July 30, 2013.

- Ven. Meevanapalane Dhammalankara’s *desanās* at “[WebLink: Sirisaddharmaya](http://WebLink:Sirisaddharmaya)”

7. **December 12, 2020:** I listened to a series of *desanas* from Susila Thero over the past few weeks. He is in Sri Lanka, and these discourses are in Sinhala. These are excellent and provide deep insights.

- Those who understand the Sinhala language can follow these discourses at “[Lowthuru Arana ලමිහිරු අරණ](#)”
- I will, of course, incorporate those new insights in my posts.
- **December 15, 2020:** The contents in the above long discourses have been separated into topics at the following website (also in Sinhala.) I am not sure how well that is done. “[දහම්ඥාලකය-DhamAlokaya](#)”

8. **September 6, 2021:** I listened to a series of *desanas* by a 16-year old Sri Lankan over the past few months. He recently became a *bhikkhu* by the name of Ven. Botale Siri Ariya Vimutti.

- It is apparent to me that to teach Buddha Dhamma with such insight at such a young age, he is likely to be a *Jāti Sotāpanna*.
- Those who understand the Sinhala language can Google “Ven. Botale Siri Ariya Vimutti” to find his discourses or follow these discourses at:

[WebLink: youtube: රට වටේම බණ කියන පුංචි පුතා. මහා ජිනාලාගදීම මහණ කරනවා|| Siwhela TV || Special Interview II Part 01](#)

9. **July 6, 2023:** Recently, I came across the following set of discourses in the Sinhala language: “[WebLink: youtube: Nibbida නිබ්බිදා](#)”

- These discourses go to deep levels of Buddha Dhamma, and I am highly impressed.

10. **June 6, 2017:** I received some pictures of “*dhātu*” collected after the cremation of Waharaka Thero’s body. Some of an *Arahant*’s bones become crystallized. These are called “*dhātu*,” and they cannot be destroyed by fire or anything else. I selected the following two pictures out of many sent by Ven. Attidiye Sudheethadheera and Dr. Neranga Abeysinghe.

11. By the way, here is a historical picture of the “Tooth relic” of the Buddha kept at the “*Daladā Maligāwa*” in Kandy, Sri Lanka:

- Such *Dhātu* of the Buddha or an Arahant are considered to be indestructible up to the end of the current “Buddha *Sāsana*,” which will last roughly another 2500 years.

12. Here are two youtube videos of the funeral of the most venerable *Thero* (the speech by Mr. Chandana Siriwardhana — where he stated the possibility of *Antarā Parinibbāna* of the *Thero* — is in Sinhala language):

[WebLink: youtube: අභයරත්නාභකාර හිමි අසුරන් ලද දහම පණිවිඩයන් - හඳු, බඳුන්, සිසුන් සමඟ - නිතිඳු වැඩින සිටිවර්ධන මහතා](#)

[Weblink: youtube: FULL VIDEO : Last rites of Waharaka himi waharaka abayarathanalankara himi](#)

21.2 Pure Dhamma – Sinhala Translation

January 24, 2017; more sections added December 2, 2017

1. Professor J. M. R. Sarath Bandara, who is a retired professor at the University of Peradeniya, Sri Lanka, has kindly taken upon the task to translate the Pure Dhamma site to Sinhala language.

- With his mastering of both Sinhala and English languages, this translation is very much superior to the word-by-word translation provided by the Google Translator plugin for WordPress.
- Therefore, I will remove Sinhala as an option in the Google Translator.

2. The pdf files for different sections at the website are given below. Only some of the sections have been translated so far, and there could be gaps in those sections as well.

- As he translates more posts and sections, the updated files will be uploaded here.

3. We have left the English titles for each section below as they appear at the website. That will make it easier to refer back to the original English posts.

- The links in the Sinhala translation to various websites — and especially videos — may not work. One can access those in the original English posts.

Much merits to Professor Sarath Bandara and his family for this meritorious deed!

21.3 Pure Dhamma – German Website

October 21, 2017

1. Puredhamma.net, which discusses Buddha's teachings per *Tipiṭaka*, is now available in German, thanks to Mr. Tobias Große in Heilbad Heiligenstadt, Germany. Here is the link:

<https://puredhamma/de>

- Mr. Große has spent a lot of time studying Buddha Dhamma, and he tells me that he has read almost all posts at the puredhamma.net site and many posts more than once. From the questions that I have been getting from him over the past year, I feel that he has grasped the key concepts and is quite capable of expressing those concepts in German.
- As of today, he has translated three main sections, and will continue to add more sections until the two sites are “in sync”.
- He is also willing to answer questions; there is a “Comment” bar at the bottom of each page.

2. Even though the “Google Translator” at the top right of the puredhamma.net site is a useful resource that can be used to translate the site material to many languages, it is done by a mechanical process, which basically translates word for word.

- Such a word for word translation sometimes gives incorrect interpretations, especially since key Pāli words with deep meanings are involved. Therefore, the “Google Translator” is not very reliable. I will remove German as an option for the “Google Translator” in a couple of months after enough sections are available at <https://puredhamma/de>.

3. Finally, it has been a pleasure to interact with Mr. Große and his family over the past year or so. His wife and children are also fully engaged and it is heartwarming to see how much they have advanced, and their enthusiasm for this meritorious project. Much merits to the whole family for their efforts!

21.4 Pure Dhamma – Korean Website

November 20, 2019

1. Puredhamma.net, which discusses Buddha's teachings per *Tipiṭaka*, is now available in Korean, thanks to Mr. Ja-nyun Kim. Patighosa is his Theravada Buddhist name, and Hojan is his pen name. He was born in South Gyeongsang Province, Korea in 1958.

Here is the link to the website:

[WebLink: Korean 퓨어 담마\(Pure Dhamma\)](#)

- It turns out that his son, 26 years of age, is actively involved in this effort. He is the manager (DHK) of the Puredhamma Study Group Cafe (<https://cafe.naver.com/puredhamma>).
- 2. They have conducted a Pure Dhamma study group for over a year. The link to that site is <https://cafe.naver.com/puredhamma>
 - Then they started a Pure Dhamma Korean Temporary Site (<https://puredhamma.quv.kr>) on April 24, 2019.
 - Now they have launched an official site <https://puredhamma.kr>
- 3. Over the past year, I have received several emails from Koreans praising the efforts of the father and son team. They must be doing a good job of translation.
 - Much merits to the whole family for their efforts!

21.5 Pure Dhamma – Hindi Website

March 9, 2023

1. Puredhamma.net, which discusses Buddha's teachings per *Tipiṭaka*, is now available in Hindi (the primary language spoken in India) thanks to LayDhammaFollower. He has been an active participant in the "[WebLink: puredhamma: Forum](#)" at puredhamma.net. I was happy to see his remarkable progress over time.

- Here is the link to the website: [WebLink: Pure Dhamma – हिंदी](#)

2. LayDhammaFollower would like to remain anonymous. I asked him to provide a brief background of him, and he has sent the following:

- I am 23 years old man from India. I was born in a Hindu family; I used to believe in rebirth even before coming to Buddha Dhamma. I studied physics in college. Before coming across the puredhamma.net website, I wandered for a few years, searching for answers to questions of meaning, purpose, suffering, etc. I did read many kinds of literature. I hoped that somewhere in some book, someone has figured out the *final* answers to questions about the whole universe and our purpose in it or at least how to be *permanently* happy.
- All answers had flaws and were not as precise or accurate as Buddha's dhamma. If they were good at giving an answer to one question, they would fail to provide a satisfactory answer to another related question. No explanations were as consistent and logical as Buddha Dhamma.
- From whatever piece one starts understanding Buddha Dhamma, the same picture emerges from a jigsaw puzzle every time. I got answers to all philosophical questions I ever had via Buddha Dhamma. I sought answers to questions of epistemology, ethics, metaphysics, etc. I found them in Dhamma.
- Today, Many contemporary teachers outside of Dhamma teach that it is attachment to "pleasurable things" that causes suffering. But no teaching has an actual answer about how to go about getting rid of all forms of attachments. Only a *Tilakkhaṇa* analysis can do it, which is not found anywhere except in Buddha dhamma.
- For some years now, thanks to the efforts of a few *bhikkhus* and the puredhamma.net website, many seekers have been gaining invaluable permanent mental peace due to the teachings of Buddha Dhamma.
- The fact that Lal is a physicist has made an immense impact on the precision and accuracy with which dhamma is communicated on the English website. Otherwise, it would have been easy to miss the subtle aspects of Dhamma. I hope to achieve the same accuracy and precision on the Hindi website.
- Today, many people have many misconceptions about Buddha Dhamma and have been miseducated to their no fault. For example, labeling *Ānāpānasati* as "Breathing meditation" has misled many people. Furthermore, the importance of moral conduct (*sila*) has been under-emphasized. A moral mindset is necessary to comprehend the deep Dhamma of the Buddha.
- I hope to counteract some of these wrong beliefs by providing the Hindi translation of the puredhamma.net English articles on the puredhamma.in website.

3. I believe LayDhammaFollower has a good understanding of Buddha Dhamma.

- He is starting with a single post and hopes to translate many more. But he understands that accuracy takes precedence over quantity.
- Much merit to him and his family for embarking on this meritorious deed!

21.6 New / Revised Posts

There are three useful tools to find relevant posts: One is the “Search” box on the top right. Second is [User's Guide to Pure Dhamma Website](#). The third is [Pure Dhamma – Sitemap](#).

21.6.1 Google Translations to Other Languages

October 2, 2016

1. Couple of days ago, I installed the capability to translate the whole site into different languages. A different language can be selected in the “Google Translate” button right above this post.

- I received input from a couple of people. Based on those, it seems that translation is 60%-80% good for Chinese translation.

2. The main problem is that with “word-to-word” translations, meanings can get lost. So, please use the translations only if necessary. For example, it may able to provide translation of some words that are not familiar.

- **Therefore, it is a good idea to use the English version as much as possible. I really worry about meanings getting lost in the translation.**

3. There are other languages that can be added. I did not want to add too many at this early stage, especially until I get some feedback on the usefulness. **I would appreciate feedback on the accuracy/usefulness of these translations, in the comments box below.**

- **If you like other languages to be added, also please comment below.** Just type the language(s) you like. I think you need to add your email address too, in order to avoid spam. Comments are not published. I normally respond only if a question is asked.

21.6.2 Pure Dhamma Discussion Forum Guidelines

December 12, 2017; revised December 17, 2017; January 23, 2018; January 7, 2019

A link to the Forum is provided at the lower right in the main menu.

1. In order to post questions or answers (i.e., to participate in discussions), one will need to register first. **But anyone can read existing posts without registering.**

To Register:

Click on the “Forum” at the very end of the main menu or [FORUM](#) to enter the Forum.

1. Click on the **“Register” button (in red)** at the LOGIN box and enter a username and an email address and submit.
2. It will say that it will send you a link and then display a “WORDPRESS” screen. CLOSE that screen. Do not do anything with that screen.
3. You will get an email to that address within minutes. Open your email browser and click on the link that was sent to you. The link in that email WILL EXPIRE within a certain time, so you need to use it before it expires. (If you don’t see an email within minutes, check you “Junk” folder).
4. **If you don’t get an email within 5 minutes, send me an email and I can setup a temporary password for you. It is easy to do and you can then reset to anew password. This is the easiest way.**
5. It will ask to enter the username that you selected earlier and you also need to choose a password. Once you hit enter, you may get another “WORDPRESS” screen. CLOSE that screen. Do not do anything with that screen.
6. Enter the Forum and login with that username/password at the “Forum Login” box.

When first registered, one will receive an email with a link to setup your own password. **One needs to use that link within 15 minutes or so (I am guessing, I don’t know exactly how much time is allowed), because that link expires. Check you Junk folder if you do not see an email within minutes.**

- **If it does not work within a few tries, DO NOT keep trying.** After 5 tries or so, the system will lock you out and then it becomes more difficult. Please send me an email at lal@puredhamma.net, and I can help you.
2. If one forgets the password at a later time, a new password can be generated by clicking on the **red “Lost Password” link** at the Login box.
- **Even an unregistered person would be able to read the posts by others on any topic. One needs to register to ask a question or to post a reply to another’s question.**
 - Please respect the viewpoints of others. No one knows everything (except for a Buddha), and we should help each other in uncovering the truth.
3. Mr. Seng Kiat Ng from Singapore has kindly agreed to act as a moderator. He will be able to move topics to “better matching” forums and also to open up new forums as necessary. He is doing this in addition to maintaining and updating the eBook; much merits to him and his family!
- Within a forum, anyone who is registered can open a new topic. Please find the forum that seems to match; we can add more forums if needed.

- **Any question even remotely connected to Buddha Dhamma (Buddhism) is welcome. There are people of very different levels of exposure to Buddhism.**
- If you feel uncomfortable posting here initially, please send it to me at lal@puredhamma.net.
- But I encourage everyone to participate because there will be people who can benefit from information at different levels. Also, it is critical to comprehend basic concepts; otherwise it will be difficult to make progress.

4. I can set the time one has to come back and edit a given post, and it is currently set at one hour. This allows one to think about one's comment and change it, if needed. Please think carefully before making comments. It is not a good idea to write too many posts on the same issue. I try to write my response in a Word document and post it when I feel comfortable. Even then I may have to come back and revise.

- This is in no way to restrict discussions. We just need to try to make our points without repeating. I have seen online forums where people just go back and forth “trying to push their views” without making any progress for themselves or helping others learn.

5. **Replying to a question:** If one hits the **reply button**, one can directly respond to a comment by that specific person (i.e., one's comment will appear below that comment or that thread). Then a reader will need to scan to find the new comment (especially if there are newer threads at the bottom).

- If one just types in the **default window**, then the comment will appear at the very end of the discussion, as a new thread. Anyone will be able to see that as the latest comment, but then one needs to refer to the comment that he/she is responding to.
- You can figure this out by looking at the posts already there.

6. A discussion forum for the Pure Dhamma website is beneficial in several aspects:

- I receive many good questions via email. When I reply to that email, only that person will get the information, and in many cases it could be of interest to so many others.
- There could be “gaps” in a given section. A given section at the website starts at a base level with initial posts and move to deeper stages with subsequent posts. If one has a question about a certain post, one could open a new topic with the post name.
- I also plan to have some information access threads on topics like “Pāli Resources”. I will post some key tools available at this site as well as at other sites, and users can add more information to it.
- This forum will also give an opportunity for others with different opinions to express their viewpoints (i.e., how they interpret a given *Sutta* or a verse in the *Dhammapada*, etc). **In most cases, there can be more than one explanation.**
- Sometimes, each individual may have their own interpretation even if it looks incorrect to others. No one should expect others to come to agreement with one's viewpoint. **It is up to each person to decide for him/herself.**
- Thoughtful, logical, and respectful discussions can be an important part of the learning process.

7. Following the Path is not merely following some set precepts or blindly following a “*guru*.” One needs to engage in stimulating discussions with oneself first (contemplation), and also with others. It is an intellectual process.

- I hope this forum will be a “virtual community center” which will help people with different levels of exposure to Buddha Dhamma to come together and grow together.
- In my own experience, I know that when trying to answer a question posed by another person — who is looking at the issue from a totally different point of view — forces me to look at the issue from a different angle. I have learned many things over the past few years that way.

8. The Buddha was the greatest scientist to be born, and we are trying to recover those deep teachings that have been buried over many centuries. Thanks to my late Noble teacher, Waharaka Thero (“[Parinibbāna of Waharaka Thero](#)”), true meanings of key concepts (eg., *anicca*, *anatta*, *viññāṇa*) have been uncovered.

- We need to maintain this momentum and make it easier for the future generations to access the pure and original teachings of the Buddha.

9. Finally, I keep the right to delete any posts that are not appropriate for the forum. I make such decisions based on the goal of this website (to teach Buddha's original teachings per Tipiṭaka), and it will be for the benefit of the general audience.

21.6.3 How to Post/Reply to a Forum Question

Revised August 12, 2022

Formatting a Post

1. The formatting buttons “b” for bold, “i” for italics, etc. can be used to make the text more legible.
2. In particular, it is good to use the “link” button to provide a link to another post on this website or an external web page. To describe the procedure, let us assume that you want to provide a link to the “Abhidhamma – Introduction” post on the website.
 - Open that post in a separate window by clicking the following link: “[Abhidhamma – Introduction](#).”
 - Copy the post's title (“Abhidhamma – Introduction”) and paste it into your text window.
 - Select that text with the title (“Abhidhamma – Introduction”) and click the “link” button. It will open a new window to put in the web address.
 - Go to that other open window with the “Abhidhamma – Introduction” post and copy the web address from that web page (which in this case is “<https://puredhamma.net/abhidhamma/abhidhamma-introduction/>”).
 - Come back and paste that to provide the link at the URL input. **Note:** Don't forget to check the little box “Open link in a new tab” so that when someone clicks on the link, it will be opened in a new window.
 - That is it!

Follow the same procedure to provide an external link.

3. You can edit your comment within an hour. **If you try to edit after an hour, it may delete that comment.**

To Post a New Question/Comment

4. Select a suitable forum from the list of forums (“Abhidhamma” forum, “Dhamma and Science” forum, etc.) and click on it.
 - That will open that particular forum with a list of already existing topics.
 - Go to the end of that list and start typing a suitable topic for your question in the box, “Topic Title (Maximum Length: 80):”
 - Then type the question in the box below and hit the “submit” button. If you need to post a link to the question, please follow the steps in #3 below.
 - You can edit your question/comment within an hour. **If you try to edit after an hour, it may delete the question.**

To Reply to an Existing Post

5. If one just types in the **default window**, the comment will appear at the end of the discussion as a new thread. Anyone can see that as the latest comment. but then one needs to refer to the comment that he/she is responding to.

- It is NOT a good idea to hit the **reply button**. If you do that, your comment will appear directly below that comment. Then a reader will need to scan to find the new comment (especially if there are newer threads at the bottom).
- Therefore, it is better to type your comment in the default window at the very bottom. If you need to, you can refer to an earlier comment by the poster's name and date or copy and paste the part of that post you need to comment on.

[The Observer Effect in Quantum Mechanics](#) – 3/20/18 (in the “[Quantum Mechanics and Dhamma](#)” section).

[Feynman’s Glass Plate Experiment](#) – 3/16/18 (in the new “[Quantum Mechanics – A New Interpretation](#)” subsection).

[Quantum Mechanics and Dhamma – Introduction](#) – 3/13/18 (in the new “[Quantum Mechanics and Dhamma](#)” section).

[What Is a Wave and What Is a Particle?](#) – 3/13/18 (in the new “[Quantum Mechanics – A New Interpretation](#)” subsection).

[Photons Are Particles Not Waves](#) – 3/13/18 (in the new “[Quantum Mechanics – A New Interpretation](#)” subsection).

[Cloning and Gandhabba](#) – 3/5/2018 (in the “Dhamma and Science” section).

“Discourse 5 – Tilakkhaṇa and Micchā Diṭṭhi” added to [Three Marks of Existence – English Discourses](#) – 3/2/2018 (in the “Anicca, Dukkha, Anatta” section). This is the last one in this series.

“Discourse 4 – Sakkāya Diṭṭhi – What is “a Person”?” added to [Three Marks of Existence – English Discourses](#) – 2/27/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

“Discourse 3 – Distorted Perceptions or Saññā Vipallāsa” added to [Three Marks of Existence – English Discourses](#) – 2/19/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

[Nirodha Samāpatti, Phala Samāpatti, Jhāna, and Jhāna Samāpatti](#) – 2/13/2018 (in the “[Living Dhamma](#)” section).

“Discourse 2 – Icca, Nicca, Anicca” added to [Three Marks of Existence – English Discourses](#) – 2/10/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

“Discourse 1 – Nicca, Sukkha, Atta” in the [Three Marks of Existence – English Discourses](#) – 2/3/2018 (in the “Anicca, Dukkha, Anatta” section).

[Three Marks of Existence – English Discourses](#) – 2/3/2018 (in the “[Anicca, Dukkha, Anatta](#)” section).

[Citta, Mano, Viññāna – Stages of a Thought](#) – 1/24/2018 (in the “[Living Dhamma](#)” section).

[Bhava and Bhavaṅga – Simply Explained!](#) 1/19/2018 (in the “[Living Dhamma](#)” section).

[Does Bodily Pain Arise Only Due to Kamma Vipāka?](#) 1/12/2018 (in the “[Living Dhamma](#)” section).

[Anidassana Viññāna – What It Really Means](#) – 1/6/2018 (in the “[Living Dhamma](#)” section).

[Pure Dhamma – Reflections on 2017](#) – 1/1/2018

21.6.8 Essays – 2017

[Bhūta and Yathābhūta – What Do They Really Mean](#) – 12/28/2017 (in the “[Rūpa Aggregate](#)” subsection of “[Living Dhamma](#)” section).

12/17/2017: Puredhamma Discussion Forum is now open: “[Pure Dhamma Discussion Forum Guidelines](#).”

[Kamma Viññāna and Nāmarūpa Paricceda Ñāna](#) – 12/12/2017 (in the “[Nāmarūpa Formation](#)” subsection of “[Living Dhamma](#)” section).

[Tipitaka Commentaries – Helpful or Misleading?](#) – 12/6/2017 (in the “[Historical Background](#)” section).

[Pure Dhamma – Sinhala Translation](#) – 12/2/2017 (More sections added by Prof. Sarath Bandara).

[Kamma Viññāna – Link Between Mind and Matter](#) – 11/30/2017 (in the “[Nāma & Rūpa to Nāmarūpa](#)” subsection of “[Living Dhamma](#)” section).

[Root of All Suffering – Ten Immoral Actions](#) – 11/14/2017 (in the new “[Dhamma with Less Pāli](#)” subsection of “[Living Dhamma](#)” section).

[Kāma Guna, Kāma, Kāma Rāga, Kāmacchanda](#) – 11/9/2017 (in the “[Assāda, Ādīnava, Nissarana](#)” subsection of “[Sotāpanna Stage of Nibbāna](#)”).

[Difference Between Dhammā and Saṅkhāra](#) – 11/5/2017 (This is an old post in the section “[Key Dhamma Concepts](#).” I basically re-wrote the post. This is a much better version).

[Assāda, Ādīnava, Nissarana – Introduction](#) – 11/1/2017 (in the NEW “[Assāda, Ādīnava, Nissarana](#)” subsection of “[Sotāpanna Stage of Nibbāna](#)”).

[Pure Dhamma – German Website](#) – 10/21/2017

[Avyākata Paṭicca Samuppāda for Vipāka Viññāna](#) – 10/17/2017 (in the “[Paṭicca Samuppāda Cycles](#)” subsection).

[Samādhi, Jhāna, Magga Phala – Introduction](#) – 10/12/17 (in the new subsection “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#)” of the “[Living Dhamma](#)” section).

[Mundane versus Supramundane Jhāna](#) – 10/12/17 (in the new subsection “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#)” of the “[Living Dhamma](#)” section).

[Ascendance to Nibbāna via Jhāna \(dhyāna\)](#) – 10/4/17 (in the “[Transition to Noble Eightfold Path](#)” subsection of the “[Living Dhamma](#)” section).

[Abnormal Births Due to Gandhabba Transformations](#) – 9/30/17 (in the “[Mental Body – Gandhabba](#)” subsection of the “[Living Dhamma](#)” section).

[Gandhabba State – Evidence from Tipitaka](#) – 9/16/17 (in the “[Mental Body – Gandhabba](#)” subsection of the “[Living Dhamma](#)” section).

[Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi](#) – 9/2/17 (in the “[Transition to Noble Eightfold Path](#)” subsection).

[Anicca – Worthlessness of Worldly Things](#) – 8/20/17 (in the “[Anicca – True Meaning](#)” subsection).

[Dasa Samyojana – Bonds in Rebirth Process](#) – 8/6/17 (in the “[Bhāvanā \(Meditation\)](#)” section).

[The Infinity Problem in Buddhism](#) – 7/15/17 (in the “[Dhamma and Philosophy](#)” section).

[List of “Saṅ” Words and Other Pāli Roots](#) – 6/29/17 (in the “[Tables and Summaries](#)” section).

[Pure Dhamma Discussion Forum Guidelines](#) – 6/22/17

[Saṅkhāra and Kammā, Viññāna and Kamma Bīja](#) – 6/16/17 (in the “[Saṅ](#)” section).

[User’s Guide to Pure Dhamma Website](#) – 6/8/17 (in “[Buddha Dhamma](#)” section).

[Is Ānāpānasati Breath Meditation?](#) – 6/2/17 (in “[Bhāvanā \(Meditation\)](#)” section).

[Viññāna – What It Really Means](#) – 5/26/17 (in “[Living Dhamma](#)” section).

[Working of Kammā – Critical Role of Conditions](#) – 5/21/17 (in “[Living Dhamma](#)” section).

[What are rūpa? – Dhamma are rūpa too!](#) – 5/13/17 (in “[Living Dhamma](#)” section).

[Micchā Ditthi, Gandhabbayā, and Sotāpanna Stage](#) – 5/6/17 (in “[Living Dhamma](#)” section).

[Buddhaghosa’s Visuddhimagga – A Focused Analysis](#) – 4/29/17 – 4/29/17 (in the “Historical Background” section).

[Misinterpretation of Anicca and Anatta by Early European Scholars](#) – 4/29/17 (This replaces a recent post, “Answers to Criticism of Pure Dhamma Interpretations”).

I have also combined two previous posts, “Theravada – Problems with Current Interpretations of Key Concepts” and “Historical Timelines of Buddha Dhamma and Sri Lanka – End of Sinhala Commentaries” to make a new post, “[Incorrect Theravāda Interpretations – Historical Timeline](#)” —4/29/17.

[Are There Procedures for Attaining Magga Phala, Jhāna and Abhiññā?](#) – 4/23/17 (in the “[Power of the Human Mind](#)” section)

Answers to Criticism of Pure Dhamma Interpretations ==> Post deleted – 4/16/17 (in the “[Historical Background](#)” section).

[Pabhassara Citta, Radiant Mind, and Bhavaṅga](#) – 4/13/17 (in the “[Abhidhamma](#)” section).

[Buddhaghosa and Visuddhimagga – Historical Background](#) – 4/8/17 (in the “[Historical Background](#)” section)

[Dasa Akusala and Anatta – The Critical Link](#) – 4/2/17 (in the “[Anicca, Dukkha, Anatta](#)” section)

[Difference Between Jhāna and Stages of Nibbāna](#) – 3/24/17 (in the “[Power of the Human Mind](#)” section)

[Anatta – the Opposite of Which Atta?](#) – 3/17/17 (in the “[Anicca, Dukkha, Anatta](#)” section)

[Sakkāya Ditthi is Personality \(Me\) View?](#) – 3/10/17 (in the “[Sotāpanna Stage of Nibbāna](#)” section)

[Parinibbāna of Waharaka Thero](#) – 3/9/17

[Pāli Dictionaries – Are They Reliable?](#) – 3/4/17 (in the “[Sutta Interpretations](#)” section)- Revised 3/7/17.

[Attā Hi Attano Nātho](#) – 3/4/17 (in the “[Dhammapada](#)” section).

[Saṅkhāra – What It Really Means](#) – 2/25/17 (in the new “Four Aggregates” subsection in the “[Living Dhamma](#)” section).

[Vedanā – What It Really Means](#) – 2/18/17 (in the new “What is Vedanā (Feelings)?” subsection in the “[Living Dhamma](#)” section).

[Cattāro Āhāra for Mental Body or Gandhabbayā](#) – 2/11/17 (in the new “Mental Body – Gandhabbayā” subsection in the “[Living Dhamma](#)” section).

[Mental Body \(Gandhabbayā\) – Personal Accounts](#) – 2/5/17 (in the “[What is Saññā \(Perception\)?](#)” subsection in the “[Living Dhamma](#)” section).

[Vipallāsa \(Ditthi, Saññā, Citta\) Affect Saṅkhāra](#) – 1/28/17 (in the “What is Saññā (Perception)?” subsection in the “[Living Dhamma](#)” section).

Also, a really good Sinhala translation of many sections of the website by Professor Sarath Bandara is now available: “[Pure Dhamma – Sinhala Translation](#).”

[Future Suffering – Why It Arises](#) – 01/22/17 (in the “[What is Saññā \(Perception\)?](#)” subsection in the “[Living Dhamma](#)” section)

[Sexual Orientation – Effects of Kamma and Gati \(Saṅkhāra\)](#) - 1/14/17 (in the “[Living Dhamma – Fundamentals](#)” subsection in the “[Living Dhamma](#)” section)

[Nikāya in the Sutta Piṭaka](#) – 1/7/17 (in the “[Sutta Interpretations](#)” section)

[Pure Dhamma – Reflections on 2016](#) – 01/01/17

[April – July 2017](#)

[January 2016](#)

21.6.9. January 2016

1

[Tiparivattaya and Twelve Types of Ñāna \(Knowledge\)](#) – 1/29/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section)

[Majjima Patipada – Way to Relinquish Attachments to this World](#) – 1/22/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section). Revised 1/23/16.

[Dhammacakkappavattana Sutta Interpretation – Uddesa, Niddesa, Patiniddesa](#) – 1/16/16 (in the Sutta Interpretations section).

[Popup Pāli Glossary with Pronunciation](#) – 1/7/16. There will be no new essay this weekend.

[Pancaupadanakkhandha – It is All Mental](#) – 1/1/16 (in the “The Five Aggregates (Pañcakkhandha)” section).

21.6.9. February 2016

2

[Nibbatti Lakkhana in Udayavaya Ñāna](#) – 2/26/16 (under the Sotāpanna Stage of Nibbāna)

[Hidden World of the Gandhabbayā: Netherworld \(Paralowa\)](#) – 2/18/16 (in Manomaya Kāya section)

[Udayavaya Ñāna – Introduction](#) – 2/12/16 (under the Sotāpanna Stage of Nibbāna)

[Relinquishing Defilements via Three Rounds and Four Stages](#) – 2/4/16 (Dhamma Cakka Pavattana sutta in the Sutta Interpretations section)

21.6.9. March 2016

3

[Getting to Samādhi via Formal Meditation Sessions](#) – 3/25/16 (in Meditation section)

[Āhāra \(Food\) in Udayavaya Ñāna](#) – 3/19/16 (under the Sotāpanna Stage of Nibbāna; new subsection on [Udayavaya Ñāna](#))

[How Perceived Pleasures \(Assāda\) lead to Dukkha](#) – 3/11/16 (Under Āsvada (Mind-Made Pleasures), Ādeenava (Bad Outcomes), Nissarana (Relinquish))

[Craving for Pornography – How to Reduce the Tendency](#) – 3/4/16 (Under Discussion of Comments)

21.6.9. April 2016

4

4/29/2016 New Section: [Myths or Realities?](#)

Two posts: [Animisa Locana Bodhi Poojawa – A Prelude to Acts of Gratitude](#)

and [Paramita and Niyata Vivarana – Myths or Realities?](#)

[Brain – Interface between Mind and Body](#) – 4/22/16 (in the Abhidhamma section. Don't be discouraged even if you don't have any exposure to Abhidhamma; I am trying to make Abhidhamma easy to grasp. No need to memorize anything)

[What are Dhamma? – A Deeper Analysis](#) – 4/15/16 (in the Abhidhamma section)

[Two Versions of 37 Factors of Enlightenment](#) – 4/8/16 (in “Anicca, Dukkha, Anatta” subsection under “Key Dhamma Concepts”)

[Why are Tilakkhana not Included in 37 Factors of Enlightenment?](#) – 4/1/16 (in “Anicca, Dukkha, Anatta” subsection under “Key Dhamma Concepts”)

[Getting to Samādhi via Formal Meditation Sessions](#) – 3/25/16 (in Meditation section)

[Āhāra \(Food\) in Udayavaya Ñāna](#) – 3/19/16 (under the Sotāpanna Stage of Nibbāna; new subsection on Udayavaya Ñāna)

[How Perceived Pleasures \(Assāda\) lead to Dukkha](#) – 3/11/16 (Under Āsvada (Mind-Made Pleasures), Ādeenava (Bad Outcomes), Nissarana (Relinquish))

[Craving for Pornography – How to Reduce the Tendency](#) – 3/4/16 (Under Discussion of Comments)

21.6.9. May 2016

5

[Supreme Qualities of Buddha, Dhamma, Saṅgha](#) – 5/28/16 (This is a re-write of a previous short post).

[Tisarana Vandana and Its Effects on One's Gati](#) – 5/28/16

5/20/2016 New Subsection: [The Grand Unified Theory of Dhamma](#), which includes two old posts and a new post: [31 Realms Associated with the Earth](#). New post in Tables and Summaries section: [31 Realms of Existence](#)

[Our Two Worlds: Material and Immaterial](#) – 5/14/16 (in Buddha Dhamma section)

[Indriya and Āyatana – Big Difference](#) – 5/7/16 (in the Key Dhamma Concepts section)

21.6.9. June 2016

6

[Possible Effects in Meditation – Kundalini Awakening](#) – 6/25/16 (In the section on Bhāvanā (Meditation))

[Can Buddhist Meditation be Dangerous?](#) – 6/17/16 (In the section on Myths or Realities)

[Gandhabbayā Sensing the World – With and Without a Physical Body](#) – 6/11/16 (In the subsection on the Grand Unified Theory of Dhamma)

[Gandhabbayā – Only in Human and Animal Realms](#) – 6/4/16 (In the subsection on the Grand Unified Theory of Dhamma)

21.6.9. **July 2016**

7

[Antarabhava and Gandhabbayā](#) – 7/29/16 (In the section Myths or Realities?)

[Udayavaya Ñāṇa – Importance of the Cittaja Kaya](#) – 7/22/16 (In the subsection on the Udayavaya Ñāṇa in the Sotāpanna stage of Nobbana)

New section: [Abhidhamma via Science](#) (Changed to [Inconsistencies with Science](#) on 06Mar2018) and a new post: [Vision \(Cakkhu Viññāna\) is Not Just Seeing](#) – 7/15/16

[Nibbāna in the Big Picture](#) – 7/8/16 (In the subsection on the Grand Unified Theory of Dhamma)

[Hetu-Phala, Paccuppanna, and Paticca Samuppāda](#) – 7/2/16 (In the section [Sorting out Some Key Pāli Terms \(Tanhā, Lobha, Dosa, Moha, etc\)](#))

21.6.9. **August 2016**

8

Started a new section: [Living Dhamma](#). The subsection “New Approach to Meditation” was deleted and those posts are now in this section. New post in this section: [What Are Kilesa \(Mental Impurities\)? – Connection to Cetasika](#) – 8/26/16

[Starting on the Path Even without Belief in Rebirth](#) (Nirāmisa Sukha to Nibbāna Suva – The Key Step) – 8/19/16

New subsection in the “Bhāvanā (Meditation)” section : [Living Dhamma](#) and a new post in it: [Peace of Mind to Nibbāna – The Key Step](#) – 8/12/16

Also, Pāli Glossary replaced by two posts with over 400 Pāli words:

[Pāli Glossary – \(A-K\)](#) and [Pāli Glossary – \(L-Z\)](#) – 8/12/16

and, updated version of [Popup Pāli Glossary with Pronunciation](#) – 8/12/16

[Living Dhamma – Introduction](#) – 8/5/16 (In the section Bhāvanā (Meditation))

21.6.9. **September 2016**

9

[Noble Eightfold Path – Role of Sobhana Cetasika](#) – 9/30/16 (in the “Living Dhamma” section)

[How Are Gati and Kilesa Incorporated into Thoughts?](#) – 9/22/16 (in the “Living Dhamma” section)

[Satipatthāna Sutta – Relevance to Suffering in This Life](#) – 9/10/16 (in the “Living Dhamma” section)

Two new posts:

[Nibbāna “Exists”, but Not in This World](#) – 9/2/16 (in the “Nibbāna” subsection)

[Suffering in This Life – Role of Mental Impurities](#) – 9/2/16 (in the “Living Dhamma” section)

21.6.9. **October 2016**

10

[Suffering in This Life and Paticca Samuppāda](#) – 10/28/16 (in the “[Living Dhamma](#)” section)

Started a new **subsection**: [Patthāna Dhammā](#) in the Paticca Sumuppada section. New post in this section: [Patthāna Dhamma – Connection to Cause and Effect \(Hetu Phala\)](#) – 10/22/16

September 30, 2016: I just installed Google Translator at top right of the website. I have setup only a few languages for now. I would appreciate feedback on the quality of the translations. Also, if you need a language that is not there, please let me know and I can add. You can use the “Comments” box below to provide input.

[Micchā Ditthi – Connection to Hethu Phala \(Cause and Effect\)](#) – 10/18/16 (in the “Living Dhamma” section)

[Getting to Samādhī](#) – 10/7/16 (in the “[Living Dhamma](#)” section)

21.8 Buddha Dhamma – In a Chart

I have made a single page chart that shows the uniqueness of the Buddha's message, and also outlines the Path that he suggested clearly.

The pdf file can be saved or printed for reference:

[WebLink: PDF File: Buddha Dhamma – In a Chart](#)

Discussion of the chart is at:

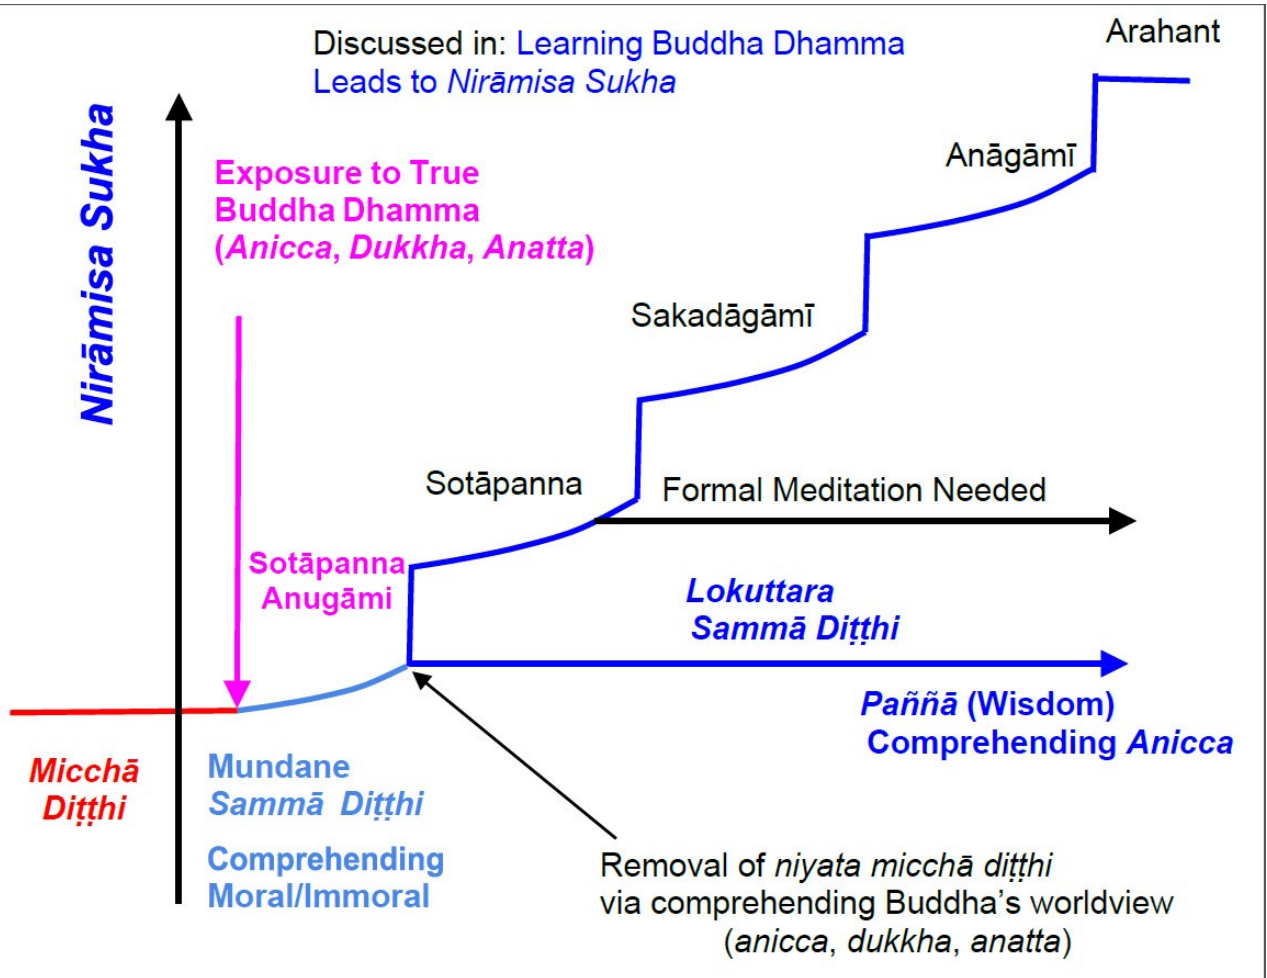

[What is Unique in Buddha Dhamma?](#)

21.9 Nirāmisa Sukha – In a Chart

There are several posts at the site on “*nirāmisa sukha*.” It is NOT a feeling (*vedanā*) in the sense of a sense pleasure; it does not belong in the *vedanā cetasika*. It is a “sense of relief” when one starts realizing the “burdens” associated with sense pleasures.

- The closest analogy (if one can be given) is the feeling one gets when one is relieved of an headache that one had since birth.

I have made a single page chart that shows how the *nirāmisa sukha* starts as one starts when one first hears the true message of the Buddha and starts comprehending it, and becomes a *Sotāpanna Anugāmi*. Then it makes permanent stepwise jumps at the four stages of *Nibbāna* culminating in the *Arahanthood*.

The pdf file can be saved or printed for reference:

[WebLink: PDF File: Nirāmisa Sukha – In a Chart](#)

Discussion of the chart is at:

[Learning Buddha Dhamma Leads to Nirāmisa Sukha](#)

21.10 Popup Pali Glossary with Pronunciation

February 20, 2020: Updated #5 URL Link for Windows and Mobile iPhone/iPad. Added at #5 and #7 – Plain Dictionary for Mobile Android. (by Seng Kiat Ng)

August 12, 2016: Mr. Seng Kiat Ng added the new words in the two new posts “[Pāli Glossary – \(A-K\)](#)” and “[Pāli Glossary – \(L-Z\)](#)” to the pop-up dictionary, so that there are now a **total of 414 Pāli words**. Please download the two new files in #3 below and delete the old files, if you have already installed the GoldenDict dictionary.

- Installation instructions are given below for those who have not installed the pop-up GoldenDict dictionary, but would like to do so.

January 7, 2016

This post was written by Mr. Seng Kiat Ng. Much merits to him and his family for this meritorious work. This is a very useful feature that can be used with any other site as well (by downloading other dictionaries; see below).

- Please remember that once you download the files as he instructed, **you will be able to highlight a Pāli word (178 words as of today) in any of the posts at the site and a popup screen will display the English meaning. You also be able to hear the Pāli pronunciation if clicked on the audio button.**
- The old [Pāli Glossary](#) (with the same 178 words) is still there in case anyone wants to peruse there; the audio files have been removed since they take too long to download.

1. We will be using the GoldenDict online dictionary platform. First, one needs to install it on one's computer and then download the two Puredhamma Pāli dictionary files to a folder on one's computer.

- Other online or downloadable (free) dictionaries can also be used as described below.

2. Goto <http://goldendict.org/download.php> and choose the version suitable for you. I chose the first option to download the Windows version.

- Download the .exe file and double click to run it and install it.
- Mine was installed in the C:\Program Files (X86)\GoldenDict directory. There should a “GoldenDict.exe” file there. This is the “clickable icon” that will open the application. It does not automatically create this “clickable icon” on the desktop, so right click on that and make a copy on the desktop for convenience.
- Now the GoldenDict application can be opened by double clicking that link on the desktop.

3. Next download the two files (one text, one audio) for the Pāli dictionary from Puredhamma.net to a folder in your computer (could be the same “GoldenDict” folder above).

- [Pure-Dhamma-Pāli-English Glossary \[399 words\] 25Feb2020.mdx](#) (Text) **Updated 25Feb2020**
- [Pure-Dhamma-Pāli-English Glossary \[399 words\] 25Feb2020.mdd](#) (Audio) **Updated 25Feb2020**

You may want to close any other screens (other than the one with the “Download” button) that pop up with advertisements. Wait until the “Download” button becomes “clickable”.

4. Now open the GoldenDict as instructed in #2 above.

- Go to “Edit” and choose “Dictionaries” and then choose the **folder** that you put the above two Pāli Glossary files.
- Now, right next to the “search button” on GoldenDict, there is the “scan popup” option selection button indicated by a “pen like” symbol. Click on it to enable scan popups.

- Now, open any page on Puredhamma.net and select a Pāli word. **If you are running Windows Explorer**, just placing the cursor on the word will make the dictionary popup (if that word is one of the 414 words that are so far in the Pāli dictionary). Try “anicca” in a post to test because that word is there.
- **If you have Google Chrome**, you need to select the word (highlight) and hit CTRL+C+C (hold CTRL button and hit C twice) for it to popup.
- There is a “speaker” symbol there in the popup and you can click on it to play back the audio file (pronunciation).
- In order for the popup dictionary to work, GoldenDict must be opened at the same time.

5. Here is a complete list of options to download the GoldenDict platform:

- Windows [GoldenDict-1.5.0-RC-517](#)
- Mac OS X [GoldenDict Early Access Builds for Mac OS X](#)
- Linux [GoldenDict Eng-Rus-En v1.1](#)

Other Dictionary:

- Mobile Android [Plain Dictionary BlueDict](#)
- Mobile iPhone/iPad [MDict \(Windows, Android, IOS, Tools, Dictionary files\)](#)

6. You can use the GoldenDict platform to access other online or downloadable dictionaries (to be used either with this site or any other site). Some can be chosen at the “Edit” menu. Go to “Edit” and choose “Dictionaries” and on the second row of that screen there are some online dictionaries that you can choose from.

- More information at the [GoldenDict.org](#) site.
- If you have two or more dictionaries loaded, then the popup will display translations provided by all of them (if that word is in them).

7. Other than GoldenDict, the following two platforms also could be used.

- [Plain Dictionary](#) (Android – Free, unlimited Dictionary with no advertisement)
- [BlueDict](#) (Android – Free; limited to 10 Dictionaries and with advertisement)
- [MDict](#) (Windows/iPhone/Ipad/Windows Mobile/Android – Free with limitations)

21.11 Reflections on 2019

January 1, 2020

1. Puredhamma.net completed a full six years online. There are over 600 posts at the site. It may look challenging to navigate through.

- It may be difficult to get an idea about the layout of the website, especially for those who are using a mobile phone or a tablet. I recommend reviewing the [“Pure Dhamma – Sitemap.”](#)
- I just went through the whole site and collected all the posts under specific sections and subsections.

2. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn. rather it is our own defiled *gati* (habits/character) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs **some self-control** to stay away from such extremes initially. **Learning pure Dhamma is the only way to break through that first barrier.** Once the *Sotāpanna* stage is attained, one will never go back.

3. In his very first discourse to the five ascetics, the Buddha explained that there is nothing in this world that is worth to be taken as “mine.” The First Noble Truth is not about the suffering that we experience in this life. In fact, some people may not even experience that much suffering in this life until the end.

- Rather, what the Buddha said is that we create CAUSES to bring about FUTURE SUFFERING if we ATTACH to worldly pleasures. We are not any different than a fish biting into a tasty bait, say, a worm. That fish does not see the hook hidden in the “delicious worm.” It will be subjected to much suffering once it bites the worm, and the hook attaches to its mouth.
- The difficulty in our case is that the deeds we do to get those sensory pleasures may not show their CONSEQUENCES in this life. That is why it is useless to follow Buddha Dhamma if one does not believe in rebirth or *kamma/vipāka*.
- As long as we CRAVE for sensual pleasures (that is different from just experiencing them,) we WILL be born with bodies that are subjected to diseases, decay, and eventual death. See, [“Is It Necessary for a Buddhist to Eliminate Sensual Desires?”](#)

4. I had an experience that really “opened my eyes” early in 2019. A brain tumor about 2-3 cm in diameter was found in the frontal lobe of my brain. Within 5 weeks they were able to operate and remove the tumor. Luckily, it was non-cancerous.

- That experience was a reminder of how fickle this life is. I was lucky to be able to survive with just losing my sense of smell. If it was not found, the tumor could have grown more and damaged my vision too.
- We all should work towards *Nibbāna* as if we have only a short time to live. In fact, that was the last advice of the Buddha before his *Parinibbāna*: ‘*vayadhammā saṅkhārā, appamādena sampādetthā*’”*ti*.

5. I discussed this key point in a recent post, [“Icchā \(Cravings\) Lead to Upādāna and to Eventual Suffering.”](#) I highly recommend reading the new series of posts on [“Origin of Life”](#) and, in particular, the subsection there [“Paticca Samuppāda – Not ‘Self’ or ‘No-Self’”](#)

- However, those of you who are not familiar with the fundamentals of Buddha dhamma (Buddhism), I recommend first reviewing the [“Pure Dhamma – Sitemap”](#) and reading on the earlier sections there, or any sections of interest.
- First, one needs to get an idea of what Buddha Dhamma is.

6. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements. That gives me confidence that there are people who can see the value of Pure Dhamma and can make genuine progress.

- Special thanks to Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every week as I write new posts and update old posts. He has done that for a few years now. He is also helping manage the discussion forum. The link to the eBook at, “[Pure Dhamma Essays in Book Format.](#)”
- Tobias Große in Heilbad Heiligenstadt, Germany, has now translated many pages of pure dhamma to German. Here is the link: <https://puredhamma/de>
- Puredhamma.net is now available in Korean, thanks to Mr. Ja-nyun Kim and his son who is the manager (DHK) of the Puredhamma Study Group Cafe (<https://cafe.naver.com/puredhamma>). The link to the website is <https://puredhamma.kr>
- There are few others who are working on translations to their own languages.
- There are also several other disciples of the Waharaka *Thero* who are working diligently to deliver the true teachings of the Buddha in the Sinhala (and English) languages; see, “[Parinibbāna of Waharaka Thero.](#)” We have also discussed others at the discussion forum.
- Christian Schoenrock has organized a group in Eastern Europe. He also has a forum discussing Pure Dhamma in English that is open to everyone: <https://discordapp.com/invite/g6UWq4b>
- Many others have contributed by pointing out errors in some posts leading to improvements. My goal is to have 100% inter-consistency as well as consistency with the *Tipitaka*. My thanks all of them.

7. I am happy about the status of the discussion forum at puredhamma.net. It completed the second full year on December 17th: “[Forum.](#)”

- Even though only a limited number of people are posting there, the quality of discussions is good. I encourage questions and take each question seriously. Most people have not been exposed to key concepts, and are not aware of them due to no fault on their own.
- There have been few issues with the submission of comments within the last month or so. I am using a software package dedicated to Word Press websites, and they are working on the issue. If anyone has a problem in submitting a question/comment, please send me an email: lal@puredhamma.net.

Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

21.12 Reflections on 2018

January 1, 2019

1. Puredhamma.net completed full five years online. There are well over 500 posts at the site. It is getting a bit complex to browse through.

- I am thinking about splitting it to three sites based on the complexity of the material. May be something like: Beginner, Intermediate, and Advanced.
- Even though there are many posts, I have not been able to adequately cover certain sections, especially *Abhidhamma*.

2. On the other hand, last year was an eye-opener for me, in that there is a need to explain basic concepts in Buddha Dhamma. I participated in a well-known Buddhist discussion forum, and only during the past three months or so that I realized that most people there do not have a basic understanding of the key concepts of Buddha Dhamma.

- Deep *suttā* are discussed there without having an understanding of key concepts like the five aggregates: *rūpa*, *vedanā*, *saññā*, *saṅkhāra*, *viññāṇa*.
- Since only a limited number of people make comments there, I am not certain how bad this problem really is.

3. I am seriously thinking about having a “sub-site” where introductory concepts in Buddha Dhamma are explained.

- That includes *dasa akusala*, Four Noble Truths, Noble Eightfold Path, and an introduction to *Paṭicca Samuppāda*.
- By the way, if you are new to puredhamma.net, please read the “[Moral Living and Fundamentals](#)” and the first subsections of the “[Living Dhamma](#)” section.
- It is absolutely necessary to learn the basics before getting into advanced concepts.

4. I am happy about the status of the discussion forum at [puredhamma.net](#). It completed the first full year on December 17th: “[Forum](#).”

- Even though only a limited number of people are posting there, the quality of discussions is good. I encourage questions, and take each question seriously. Most people have not been exposed to key concepts, and are not aware of them due to no fault on their own.
- I am glad to see that at least a limited number of people are making significant progress due to those discussions. It is hard to explain everything in a post. Therefore, the forum is a good way to bring up points that I missed, or not paid enough attention to.
- My sincere thanks to all who are contributing to the discussions by proving their own input.

5. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements; that gives me confidence that there are people who can see the value of Pure Dhamma and can make genuine progress.

- Special thanks to Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every week as I write new posts and update old posts. He is also helping manage the discussion forum.
- Tobias Große in Heilbad Heiligenstadt, Germany, has now translated many pages of puredhamma to German. Here is the link: <https://puredhamma/de>
- I understand that there is a Korean translation too. The person who is doing the work has written to me, but seems to want to stay anonymous.

- Christian Schoenrock has organized a group in Eastern Europe. He also has a forum discussing Pure Dhamma in English that is open to everyone: <https://discordapp.com/invite/g6UWq4b>
- Many others have contributed by pointing out errors in some posts leading to improvements. My goal is to have 100% inter-consistency as well as consistency with the *Tipiṭaka*. My thanks all of them.

Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

21.13 Reflections on 2017

January 1, 2018

1. Pure Dhamma discussion forum was launched on December 17. I had wanted to do that for a while, and I am glad to see that there are several good discussions started already. I hope more readers will take part, not only to ask questions but also to answer questions by others.

- Over the past few years, I have learned a lot by trying to answer questions put forth by others. Such questions force me to look at a given issue from a different point-of-view.
- Now more people can benefit in two ways: One can get answers from multiple people (different people look at the same issue from different angles), and everyone can benefit from the discussions.

2. I want to start working a new project that I have been wanting to do for a while. It is to illustrate the real connection between quantum mechanics and Buddha Dhamma. Some people have tried to do that highlighting “quantum weirdness”, but in fact there is no weirdness in quantum mechanics.

- So, I hope the discussion forum will grow and I can only drop by once in a while.
- Forum guidelines and how to register: “[Pure Dhamma Discussion Forum Guidelines](#).”
- One does not need to register to read questions and comments by others.

3. Puredhamma.net is now available in German language, thanks to Mr. Tobias Große in Heilbad Heiligenstadt, Germany. Here is the link:

<https://puredhamma/de>

- Professor J. M. R. Sarath Bandara has added more sections to the Sinhala translation of the Puredhamma website recently: [Pure Dhamma – Sinhala Translation](#)

4. I have personally made significant progress. Even though I am not certain that I have been released from the *kāma loka*, it seems I am almost there.

- However, I do not worry about specific attainments. I believe that if I pursue the Path, the fruits will appear naturally, just like a tree will grow and bear fruit if it is taken care of by providing water, sunlight, and nutrients.

5. I need to make a comment about the *jhānā*, since there are some misconceptions. If one cultivates *jhāna*, the fourth *Ariya jhāna* can be attained only by an *Anāgāmī*. It is fairly easy to verify if one has attained the *Anāgāmī* stage (no cravings left for any sensual pleasures including sex, food, music, etc).

- When one attains the *Anāgāmī* stage, *Sammā Samādhi* is complete; hence if one has cultivated *jhāna*, one would attain the fourth *Ariya jhāna*.
- One finally attains the *Arahant* stage by completing *Sammā Ñāṇa* and *Sammā Vimutti*: “*atthāngehi samannāgato Sekhā, dasāngehi samannāgato Arahant*”, i.e., there are ten steps to the *Arahant* stage.
- These are discussed in detail at: “[Samādhi, Jhāna \(Dhyāna\), Magga Phala](#).”

6. A related issue is that one does not lose “*kāma guna*” associated with the human *bhava* (i.e., any sense pleasure like the ability to taste the sweetness of sugar) even when attaining the *Arahant* stage. **One just loses any craving for them. One has seen the fruitlessness and dangers in craving for them.**

- Therefore, one with any type of *magga phala* will still taste delicious food as such, or good music as pleasant, or feel the comfort in an air-conditioned room. These are “*kāma guna*” associated with the human *bhava*, and are removed only when an *Arahant* attains *Parinibbāna*, i.e., at the physical death of the body.
- This is explained in “[Kāma Guna, Kāma, Kāma Rāga, Kāmaccandha](#)”.

7. Buddha's true message is contrary to the message embodied in all other religions and philosophies/world views. The goal is not to merely live a moral life, but also to see the dangers in "maintaining status quo" by just living a good, moral life: **It is imperative to get out of the rebirth process in order to prevent unimaginable types of suffering in future lives.**

- It is true that a "normal human mind" sees this as a pessimistic message. Stopping the rebirth process seems very drastic and disconcerting.
- **Therefore, it is not even advisable to focus on that in the beginning.** It is better to try to understand basic concepts first, as discussed in the first subsections in the "[Living Dhamma](#)" section (and the "[Bhāvanā \(Meditation\)](#)" section), and feel the increasing levels of *nirāmisā sukha* as one makes progress.
- When one advances to higher subsections of the "[Living Dhamma](#)" section, one will be reading advanced concepts. In the end, one would realize that the key message of the Buddha is actually the best message that one could receive and is more valuable than anything in this world.
- The unconventional message of the Buddha is "a world view that has never been known to the world" or "*pubbe ananussutesu dhammesu.*" That is what I try to explain at this website in a systematic way.

8. If even a single person can attain the *Sotāpanna* stage, that would be worthwhile my time writing for even ten years. That means stopping an uncountable number of births in the *apāyā* for that person.

- But I know that number is higher even for a given year, based on emails that I receive. That will keep me going for as long as I can write. And there is so much to write! Even if I write for ten more years, there will still be more to write.
- Of course, I or anyone else cannot verify whether another has attained the *Sotāpanna* stage or any other *maggā phala*. But even if one has become a *Sotāpanna Anugāmi*, he/she is an *Ariya* and is bound to attain the *Sotāpanna* stage in the immediate future. *Sotāpanna Anugāmis* are included in "*Attha purisa puggalā*" or the "Eight types of Noble Persons".

9. I am appreciative of many kind comments on the usefulness of the site, and about personal achievements; that gives me confidence that there are people who can see the value of pure Dhamma and can make genuine progress.

- My thanks also to those who made comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every weekend as I write new posts and update old posts.
- Many others also pointed out many errors in posts which have led to improvements. My goal is to have 100% inter-consistency as well as consistency with the *Tipiṭaka*.
- I also want to illustrate that there is no need to consult late commentaries like *Visuddhimagga*; that can only lead to confusion. I have shown many inconsistencies in them; see, "[Historical Background](#)." There are three original commentaries included with the *Tipiṭaka* and those are sufficient.

9. Finally, I always highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- One with a purified mind can live in the most seductive place and yet not be perturbed. But of course to get to that point, one needs to gradually reduce attachment to **excess** sense pleasures, and to stay away from bad friends and bad environments (in order to see for oneself how much "peace of mind" can be realized).
- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds making us do immoral things (defilements can vary from hate and excess greed to just being ignorant of the true nature of the world).
- All we need to do is to get rid of our bad *gati* (or *gathi*; I note that I have used both spellings over the years) and cultivate good *gati*. This is the key to *Nibbāna*. During that process, one will start feeling the

“cooling down”, and then start comprehending *anicca*, *dukkha*, *anatta*, which leads to the *Sotāpanna* stage. Therefore, it is a step-by-step process.

Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

21.14 Reflections on 2016

January 1, 2017; revised (#7) January 6, 2016

1. Buddha's true message is contrary to the message embodied in all other religions and philosophies/world views. The goal is not to just live a moral life, but also to see the dangers in "maintaining status quo" by just living a good, moral life. It is imperative to get out of the rebirth process in order to prevent unimaginable types of suffering in future lives.

- This unconventional message of the Buddha is "a world view that has never been known to the world" or "*pubbe ananussutesu dhammesu*."
- However, it is not possible for a "normal human mind" — no matter how brilliant — to comprehend the fact that **this apparently pessimistic message of the Buddha is actually the best message that one could receive and is more valuable than anything in this world.**

2. I know this by own experience and that is why I am willing to state this straightforwardly, even though it may scare off some, who have been erroneously led to believe that Buddha Dhamma (Buddhism) is not that different from other religions or world views that confine a life's goal to just to live a moral life.

- It is definitely true that one MUST live a moral life. If one lives an immoral life, one's mind will be too contaminated to grasp that critical message of the Buddha.

3. Expressed in a different way: One needs to live a moral life and follow the mundane Eightfold Path first to get rid of the worst defilements (cobwebs that cover the mind) so that one could grasp this unique message.

- So, after three years of writing, and contemplating how to guide someone through the easiest path to grasp that key message of the Buddha that goes against our traditional beliefs, I have started a new section — "[Living Dhamma](#)" — that can hopefully make this process easier.
- **One starts at a place even without having to accept any key foundational concepts like *kamma* and *kamma vipāka* or the validity of the rebirth process.**
- One does not need to believe in anything except one's own experience. Through the improvements in one's sense of well-being, one's mind will become clear and will be able to grasp the key aspects of Buddha Dhamma.

4. My goal is to make this section section the centerpiece of the website. Anyone — regardless of one's familiarity with Buddha Dhamma (Buddhism) — should start at the very beginning, because it is imperative to grasp the very basics. I have had enough correspondences with many readers over these three years to see that many have not fully grasped the basics; that could leave out key pieces in the big picture.

- It could be a big mistake to assume that one knows the basics and thus skip them.
- It is also a mistake to try to contemplate on concepts like *anicca*, *dukkha*, *anatta* or *sunyata* without grasping the essential fact that one needs to start experiencing the "peace of mind" (*nirāmisā sukha*) by staying away from those thoughts, speech, and actions that can defile and make a mind stressful and not susceptible to grasping "a world view that has never been known to the world".
- The goal should be to "capture the essence" and not to try to memorize everything. Bits and pieces of the jigsaw puzzle will start falling into place, leading to joyful "Aha! moments".

5. The website is completing three full years in existence, and I am glad that there an increased interest among countries all over the world despite the fact that pure Dhamma is unconventional.

- When one starts seeing and experiencing the "true Dhamma", it will become a joyful experience and one will be compelled to dig deeper and find more.

6. This is why I am appreciative of many kind comments on the usefulness of the site; that gives me confidence that there are people who can see the value of pure Dhamma.

- My thanks also to those who made comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in

an eBook format and for updating it every weekend as I write new posts and update some old posts. He and many others also pointed out many errors in posts which led to improvements.

- There are readers from many countries and for the year 2016, the top 20 countries are: United States, Singapore, New Zealand, Great Britain, Sri Lanka, Japan, China, Australia, India, Sweden, Hong Kong, Canada, Germany, Bulgaria, Thailand, France, Malaysia, Russian Federation, Indonesia, South Africa.
- A few more statistics from Google Analytics on user experience: Sessions = 50,688; page views = 720,269; Pages / Session = 14.21; Bounce Rate = 1.83%; % New Users = 54.41%. And in December, 8.3% spent over an hour at a time at the site according to the web host.
- Pure Dhamma seems to have no national boundaries, as it should be. It describes the true nature of our world.

7. Another related comment from some is their anxiety of why it is taking too long for them to attain the *Sotāpanna* stage, and how can one know for sure whether one is even making progress.

- This is a very important question. The Buddha was asked the same question. His answer was: “Do not worry about those things day in and day out. Just concentrate on learning Dhamma and keep living by that Dhamma”.
- His gave a simile: “How does a good farmer go about making sure that he gets a good harvest? He prepares the field, uses good seeds, and once they germinate he makes sure to keep the weeds out and provide necessary nutrients. He does not waste time worrying about the harvest”.
- The best way to gauge one’s progress is to look back and see whether one has made improvements in controlling one’s anger and greed by being mindful of one’s thoughts and actions.

8. I would like to share a personal experience that illustrates the “*anicca* nature” of this world. I eat healthy and exercise regularly (yoga and cardio), and have been able to avoid even a minor ailment since 2009. But two weeks ago, a herniated disk (which was first diagnosed in 2008) started giving me physical pain on my left arm/shoulder without any obvious physical cause.

- By the way, I can also confirm that it is impossible to get into *jhānā* when one is under such physical pain. Therefore, there is no relief from this obvious *kamma vipāka*.

This is a good example of the *anicca* nature: unexpected problems can arise even if you take necessary precautions. I must hasten to point out two facts:

- I am not saying that this happened without a cause. It is obviously a strong *kamma vipāka* that was hard to avoid despite taking precautions (eating well/exercise) or in the *Abhidhamma* language, not making bad conditions (*samanantara paccayā*) for such *kamma vipāka* to bear fruit.
- If I had not been engaging in a good exercise program or had not paid attention to what I eat, I am sure I would not have been able to go 7 years without a significant health problem.

But with my productivity plunging (it is almost impossible to concentrate with such acute pain), it has brought me back to reality.

9. Finally, I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- Even if one is not be able to attain the *Sotāpanna* stage in this life, the effort will not go to waste: it will make it easier in the future. As the Buddha advised, just follow the Path if it seems to make sense; results will follow.
- But to get there, one needs **some self-control** to stay away from such extremes initially. **Learning pure Dhamma is the only way to break through that first barrier.** Once the *Sotāpanna* stage is attained, one will never, ever go back. (if one becomes a *Sotāpanna magga anugami*, one will never go back in this human *bhava*, which could be many more human births).
- One with a purified mind can live in the most seductive place and yet not be perturbed.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from hate and excess greed to just being ignorant of the true nature of the world) making us do immoral things.

Happy New Year!

May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

21.15 Reflections on 2015

January 1, 2016

I started the website sometime in early January of 2014. I am pleasantly surprised to see a marked increase in audience in 2015 compared to 2014. Actually, the increase in time spent at the site (indicated by the bandwidth and pages) has increased much more than the number of visits. That is what I really like: those who “really get it” spend more time learning pure Dhamma.

1. First of all, my heartfelt thanks for the many kind comments on the usefulness of the site, and also making comments/suggestions/questions that have led to improvements of many web pages. Special thanks to Mr. Seng Kiat Ng from Singapore for putting together all the posts in an eBook format and for updating it every weekend as I write new posts and update some old posts; he has also pointed out many errors in posts which led to improvements.

- Many others have pointed out such errors and suggested improvements to the site, and I am grateful to all.
- There are readers from over 50 countries and for the month of December, 2015, the top 20 countries are: United States, Singapore, New Zealand, Great Britain, Sri Lanka, India, Australia, Malaysia, Bulgaria, Ecuador, Netherlands, China, Canada, France, Indonesia, Thailand, Austria, Brazil, Hong Kong, and Russian Federation. Pure Dhamma seems to have no national boundaries, as it should be. It describes the true nature of our world.
- In early December, 2015, I upgraded the hosting platform to have a virtual private server and it also seems to have helped speed up the page loading.
- If you encounter problems accessing the site, avoid the www in the address line: It should just be: <https://puredhamma.net>. Normally, typing just “puredhamma.net” should direct to <https://puredhamma.net>. Or, one could Google search “puredhamma” and the link will come out on the top.
- I also upgraded to a more secure “https” from “http” just to assure that the content will not be tampered with. I encourage sharing or using anything that is on the site. Anyone is “free to copy” any of the content. Reference to the site is a courtesy, but not required.

2. The most common feedback I get is on the usefulness of the site. I appreciate those comments.

- When I started the site, some of my friends warned me that “pure Dhamma” is too difficult to understand, and I may turn off people. But my goal is to present the true message of the Buddha as much as possible. Not everyone may be able to understand it initially, but for those who can, it will be a life-changing experience as it has been for me.

3. Another related comment from some is their anxiety of why it is taking too long for them to attain the *Sotāpanna* stage, and how can one know for sure whether one is even making progress.

- This is a very important question. The Buddha was asked the same question. His answer was: “Do not worry about those things day in and day out. Just concentrate on learning Dhamma and on contemplating the *anicca* nature of this world. The rest will follow”.
- His gave a simile: How does a good a farmer go about making sure that he gets a good harvest? He prepares the field, uses good seeds, and once they germinate he makes sure to keep the weeds out and provide necessary nutrients. He does not waste time worrying about the harvest”.

4. In the same way, one just needs to learn pure Dhamma and live by it. One needs to understand what *Nibbāna* or *Nivana* is, in a step-by-step process. Initially, one does not need to worry about stopping the rebirth process (this is true even up to the *Sotāpanna* stage). One should first focus on “quenching the fires that burn inside”: One should experience the “peace of mind” that is palpable when one gradually loses extreme greed, hate, and ignorance (not knowing the true nature of this world).

- “*Ragakkhayo Nibbanan, dosakkhayo Nibbanan, Mohakkhayo Nibbanan*” (“Cooling down is attained with getting rid of greed, hate, and ignorance”) is valid from this initial “cooling down” all the way to the attainment of the *Arahant* stage. Just concentrate on getting rid of the strongest immoral acts via the body, speech, and the mind first.
- Thus the best way to gauge the progress is to see how much greed, hate, and ignorance has been lost over a given time.
- Here, “getting rid of ignorance” is an important aspect, which can come ONLY via learning Dhamma, i.e., only via learning the true nature of this world.

5. When one follows this basic process, one WILL start feeling the resulting cooling down. One will realize that one becomes more thoughtful and tolerant of others, even when they do inappropriate things.

- And with time, one will see that others also seem to act less harshly. It is hard to believe but one’s mindset CAN affect how others treat oneself. It is a feedback loop that may not be noticeable initially, but will become apparent with time.

6. Then one day, one will realize that one does not have the *gathi* even remotely resembling of those in the four *apāyā*: no extreme hate suitable for a hell being, no extreme greed suitable for a *preta* (hungry ghost), no “animal *gathi*,” and one does not have the mindset to rely on others (*asura*). Then one realizes that one is a *Sotāpanna*.

- When one understands that the consequences of extreme immoral acts can be much more harsh in the long-term compared to any short-lived satisfaction, then one’s mind will automatically reject such thoughts. Comprehending the *anicca* nature will do the same.

7. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from vile to just being ignorant of the true nature of the world) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs **some self-control** to stay away from such extremes initially. **Learning pure Dhamma is the only way to break through that first barrier.** Once the *Sotāpanna* stage is attained, one will never, ever go back. (if one becomes a *Sotāpanna magga anugami*, one will never go back in this life).
- Even if one is not be able to attain the *Sotāpanna* stage in this life, the effort will not go to waste: it will make it easier in the future. As the Buddha advised, just follow the Path if it seems to make sense; results will follow.

Happy New Year! May the Blessings of the Triple Gem (Buddha, Dhamma, Saṅgha) be with you always!

21.16 Reflections on 2014

January 1, 2015

I started the website sometime in early January of 2014. Since there is no discussion forum at the site, I thought of making a summary on the 52 comments (excluding follow-up correspondence) that I received over the year (I did respond to all individual comments).

1. First of all, my heartfelt thanks for the many kind comments on the usefulness of the site.
2. Some people (mainly those I know personally) “complained” that once they start reading, they “got absorbed” in the material and they could not get to their “daily tasks”. This could be a concern for some others as well. The easiest solution is to set an alarm.
 - I assure everyone that once one gets a “foothold” one will become more responsible for their families, not the other way around. As one begins to understand the true message of the Buddha, one will start allocating one’s time wisely, taking time away from “entertainment” rather than from those tasks that are one’s responsibilities.
 - As some of you may have already noticed, one becomes more thoughtful and considerate, when one starts truly understanding the message of the Buddha. One realizes that we all are in the same boat, trudging along in this tedious rebirth process, and one feels true compassion for others. One will not shy away from one’s responsibilities to anyone let alone to one’s family.
 - If you do get absorbed in the material, it is not to my credit. From experience, I know that pure Dhamma is much more satisfying and fulfilling than any sense pleasure (even before the *jhānā*). Learning Dhamma is learning about nature in a way that had not been possible before the Buddha! And there is no other task that is more important than one’s own “long-term” future.
3. There were several people who made suggestions for new posts. Such suggestions are always welcome. If I have not responded to a couple of requests that is because of a reason. I do not want to “jump ahead” until the background material is presented. Please do not shy away from making suggestions.
4. Another important comment was that, “in the *Satipaṭṭhāna sutta*, didn’t the Buddha recommend the “breathing meditation” contrary to what I described as *ānāpāna*?”. If one is reading the *sutta* as commonly translated these days, that is indeed what the translations say. But we need to examine the Pāli text of the *sutta* to get the correct interpretation. I plan to write a series of posts on the *Satipaṭṭhāna sutta* carefully going through the Pāli text.
 - And we need to sort out the types of meditation recommended by the Buddha from those that have been practiced by *Hindu yogis* and are described in the *Visuddhimagga*. I think this is a “mental block” for even *Theravāda* Buddhists. Unless one sits down and stay like a statue, it does not count as “meditation” for many people.
 - Those days, Buddha’s primary recommendation was to listen to Dhamma discourses. Many people attained *magga phala* just by listening to such discourses. The *Satipaṭṭhāna sutta* was delivered in the later years for *bhikkhus* who needed systematic guidance.
 - If one pays attention, one can get to *samādhi* while listening (and also while reading) Dhamma concepts. I highly recommend reading posts at this site at a quiet time, and see whether it makes you more calm. It will help in getting to *jhānā* in the longer term.
 - Whether listening or reading, one should fully concentrate on the subject, and may even want to stop reading and think about the material when a new concept is discussed. Then the mind focuses on that point and automatically gets to *samādhi*. This is the key to removing defilements from the mind (which are the biggest chunk that in turn trigger other defilements). When one focuses on a “worldly thing” such as breath or a *kaṣiṇa* object, that just gets the mind to *samādhi*, without doing any cleansing.

5. One does not even need to do any formal meditation initially. If one can spend some “quality time” (quite times where one can think as one reads) a few times a week, that would be more than enough. As with anything with the mind, the mind will ask for more as needed (this is the *chanda* and *citta* part in the *Satara Iddhipāda* of *chanda*, *citta*, *virīya*, *vīmaṃsā*). And when the mind asks for it, that is the best time to start getting absorbed in the material, making the effort (*virīya*) and critically examining the key concepts (*vīmaṃsā*).

- One can get all the way to the *Sotāpanna* stage by just comprehending the main message that the Buddha was trying to convey: In the long run, it is unprofitable to strive for material things in this world. That there is a happiness of better quality when one loses craving for sense pleasures.
- **But that cannot be achieved by “forcefully giving up sense pleasures”, doing “breath meditation”, or just by following the five precepts.** Rather, by understanding the deep message of the Buddha about the “real nature of this world”, one’s mind gradually realizes the futility of seeking sense pleasures as one gradually comprehends *anicca*, *dukkha*, *anatta*. Dhamma will be the guide.

6. I very much want to highlight the fact that Buddha Dhamma is not about hiding in a remote place and shying away from the society or subjecting oneself to harsh living.

- It is not those enticing or seducing things that make us do immoral things and make our minds stressed in turn; rather it is our own defiled minds (defilements can vary from vile to just being ignorant of the true nature of the world) making us do immoral things.
- One with a purified mind can live in the most seductive place and yet not be perturbed.
- But to get there, one needs **some self-control** to stay away from such extremes initially. **Learning pure Dhamma is the only way to break through that first barrier.** Once the *Sotāpanna* stage is attained, one will never go back.

Happy New Year! May the Blessings of the Triple Gem be with you always!

21.17 List of Pāli words with diacritical mark

Pāli characters with diacritical mark

Ā Ī Ū Ñ Ñ Ñ Ṭ Ḍ Ṇ Ḳ Ṣ
 ā ī ū ñ ñ ñ ṭ ḍ ṇ ḳ ṣ

Ā ā Ī ī Ū ū Ñ ñ Ñ ñ Ṭ ṭ Ḍ ḍ Ṇ ṇ Ḳ ḳ Ṣ ṣ

The Pāli word “xxxx” is in between two “|”s — i.e. “|xxxx|” to prevent replacement when “Find and Replace” is carried out.

Pāli word	Pāli word with Diacritical Mark	
abhijja	abhijjā [abhijjhā]	Abhijjā [Abhijjhā]
abhinna	abhiññā	Abhiññā
adinava	ādīnava	Ādīnava
adinnadana	adinnādāna	Adinnādāna
ahara	āhāra	Āhāra
anagami	anāgāmī	Anāgāmī
anapana	ānāpāna	Ānāpāna
anapanasati	ānāpānasati	Ānāpānasati
apaya	apāya	Apāya
apo	āpo	Āpo
arupa	arūpa	Arūpa
asava	āsava	Āsava
asavakkhaya	āsavakkhaya	Āsavakkhaya
avijja	avijjā	Avijjā
ayatana	āyatana	Āyatana
bhavana	bhāvanā	Bhāvanā
bhuta	bhūta	Bhūta
ditthi	ditṭhi	Diṭṭhi
jati	jāti	Jāti

jhana	jhāna	Jhāna
kamesu miccacara	kāmesu micchācāra	Kāmesu micchācāra
maha	mahā	Mahā
mula	mūla	Mūla
musavada	musāvāda	Musāvāda
nana	ñāṇa	Ñāṇa
nibbana	nibbāna	Nibbāna
nikaya	nikāya	Nikāya
niramisa	nirāmisa	Nirāmisa
pali	pāli	Pāli
panatipata	pāṇātipātā	Pāṇātipātā
panna	pañña	Pañña
parusavaca	parusāvācā [pharusāvācā]	Parusāvācā [Pharusāvācā]
patisambhida	patisambhidā	Patisambhidā
patisandhi	paṭisandhi	Paṭisandhi
pisunavaca	pisuṇāvācā	Pisuṇāvācā
piti	pīti	Pīti
punna	puñña	Puñña
raga	rāga	Rāga
ragakkhaya	rāgakkhaya	Rāgakkhaya
rupa	rūpa	Rūpa
saddha	saddhā	Saddhā
sakadagami	sakadāgāmī	Sakadāgāmī
salayatana	saḷāyatana	Saḷāyatana
samadhi	samādhi	Samādhi
samma	sammā	Sammā

sampappalapa	sampappalāpa	Sampappalāpa
samsara	saṁsāra	Saṁsāra
samuppada	samuppāda	Samuppāda
sankhara	saṅkhāra	Saṅkhāra
sankhata	saṅkhata	Saṅkhata
sanna	saññā	Saññā
satipatthana	satipaṭṭhāna	Satipaṭṭhāna
sotapanna	sotāpanna	Sotāpanna
suddhaṭṭhaka (Sinhala)	suddhāshtaka	Suddhāshtaka
suddhatthaka (Pali)	suddhaṭṭhaka	Suddhaṭṭhaka
tanha	taṇhā	Taṇhā

sankhata	saṅkhata	Saṅkhata
vithi	vīthi	Vīthi
tilakkhana	tilakkhaṇa	Tilakkhaṇa
vipāka	vipāka	Vipāka

21.18 **Mars Curiosity Photos Suggest Life May Have Existed on Red Planet**

“A careful study of images taken by the NASA rover Curiosity has revealed intriguing similarities between ancient sedimentary rocks on Mars and structures shaped by microbes on Earth. The findings suggest, but do not prove, that life may have existed earlier on the Red Planet”:

[WebLink: NBCNEWS: Mars Curiosity Photos Suggest Life May Have Existed on Red Planet](#)

Here is the pdf of the paper just published that proposed the hypothesis:

[WebLink: LIBERTPUB: Life on Mars Hypothesis-Noffke-Astrobiology-2015](#)

21.19 Recent Publications on Benefits of Meditation

There have been an accelerated activity in studying the benefits of meditation on the brain and on physical health in general. Here are some very recent publications:

- Scientific American November 2014 (volume 311, Number 5) cover story is “Mind of the Meditator”, by M. Ricard et al. : [WebLink: PDF File: Ricard-Mind of the Meditator- Scientific American – November 2014](#)
- A paper that just came out online in early November (in the journal *Cancer*) reports that the [WebLink: WIKI: Telomeres](#) – the protein caps at the end of our chromosomes that determine how quickly a cell ages – stayed the same length in cancer survivors who meditated or took part in support groups over a three-month period: [WebLink: Carlson-Mindfulness based Cancer recovery-2014](#)

I have discussed the effects of changing habits on the brain (which is more related to insight meditation): see, [“Truine Brain: How the Mind Rewires the Brain via Meditation/Habits.”](#) Insight meditation can be expected to have much more significant changes in the brain as well as in physical health. But such studies have not been conducted yet. Selected references on research studies (2011-2012) and books related to meditation can be found in that post; there have been many more publications since then.

I was surprised to come across the following article in the prestigious journal “Science” which, using real time input from 5000 people all over the world, confirmed what the Buddha said 2500 years ago: that a wandering mind is an unhappy mind; see, [WebLink: PDF File: A wandering mind is an unhappy mind- Science-Killingsworth-2010.](#)

Much merits to Neranga Abeyasinghe and his family for sending me the second publication.

21.20 Laniakea: Our home supercluster

Superclusters – regions of space that are densely packed with galaxies – are the biggest structures in the Universe. But scientists have struggled to define exactly where one supercluster ends and another begins. Now, a team based in Hawaii has come up with a new technique that maps the Universe according to the flow of galaxies across space. Redrawing the boundaries of the cosmic map, they redefine our home supercluster and name it Laniakea, which means ‘immeasurable heaven’ in Hawaiian (**from Nature Video**)

[WebLink: YOUTUBE: Laniakea: Our home supercluster](#)

- It amazing to see how unfathomably vast our “world” is, even though this is only a small part of even our universe. However, imagine this together with uncountable worlds teeming with life, that we are not aware of! This is why the Buddha said not to spend time exploring the details of this “world”. There is no end to it, either spacewise or timewise.
- But we need to keep in mind that only human minds can even comprehend such things. If we are to be born an animal or worse this kind of thinking is not possible, and we will get trapped in such worlds for unimaginably long times. Thus what we need to do is to take advantage of the brief time we have in this life to comprehend the true nature of “this world”, i.e., *anicca*, *dukkha*, *anatta*, and to become free of it.

21.21 Think Outside the Box!

1. Here is an interesting presentation on the question of what motivates people. Embedded in this presentation is the fact that without self-motivation coming from self-satisfaction, it is hard to examine things from different perspectives. It works the other way too: new insights in turn provide motivation:

[WebLink: YOUTUBE: Dan Pink: The puzzle of motivation](#)

- One of my goals has been to help others to achieve the same exhilarating experience that I have had learning and practising pure Dhamma. It cannot be matched by any other experience.
2. Many people do things just because others do, and follow the “standard practices”. In following Buddha Dhamma too, many just do what their parents or other “established authorities” do. It may be a good idea to pause and re-examine some deeply-embedded ideas. Each person may have his/her own set of “beliefs”.
- Some think it is enough to say some precepts and may be chant or listen to chantings to follow the Path.
 - Others think it is silly to do those exact same things. And what needs to be done is to learn *Abhidhamma* at the deepest level.
 - I think there is a value in each, if done properly. And what needs to be given priority in one’s practice should be in line with one’s own preferences, but the horizons need to be expanded to look into other aspects once-in-a-while and see whether there is something to be gained from those too. Our perspectives change as we make progress.
3. Yet, no matter what one does, real progress cannot be even STARTED without understanding the main message of the Buddha: the true nature of this world, i.e., *anicca*, *dukkha*, *anatta*.
- It makes a huge difference between the interpretation of *anicca* as “impermanence” or “not being able to maintain to one’s satisfaction”. Same with *anatta* as “no-self” or “one ends up truly helpless trying to seek happiness in this rebirth process”.
 - See, “[Anicca, Dukkha, Anatta – Wrong Interpretations](#)” and the follow-up posts.

21.22 There are as many creatures on your body as there are people on Earth!

January 20, 2016: A new study on household bugs added (below the video)

1. Before the simple microscope was invented in the late 1500's, people could see only those animals visible to the naked eye. Life seemed to explode when Van Leeuwenhoek reported the discovery of micro-organisms in 1676; he first reported numerous "microscopic creatures" in a glass of water.

With the new scientific instruments we can "see" even more minute lifeforms:

[WebLink: YOUTUBE: There are as many creatures on your body as there are people on Earth](#)

2. A new study reveals that there are numerous species of bugs — not counting the actual number — that live in a house (which has only a few humans):

[WebLink: EUREKALERT.ORG: First study of arthropods in US homes finds huge biodiversity](#)

The pdf file of the publication: [WebLink: PDF File: Bertone-Arthropods of the great indoors-peerj-2016](#)

3. The number of people on this Earth is insignificantly small compared to the number of other beings (seen and unseen), or even just the animals. As the above video shows, there are a huge number of living beings even on a human body; imagine how many would be on the body of an unclean animal. This is why the Buddha said it is extremely difficult to get a human birth; see, "[Rebirth – Connection to Suffering in the First Noble Truth.](#)"

4. It must be noted that Buddha's disciples (and probably other *Hindu yogis*) were able to "see" such microscopic creatures with their *abhiññā* powers. There is a story in the *Tipiṭaka* about a *bhikkhu* with *abhiññā* powers (but not yet attained *Arahanthood*) once focused his powers to a glass of water that he was about to drink and saw a multitude of tiny creatures. He kept trying to filter them out and was getting distressed. The Buddha saw this and told the *bhikkhu* that it is not possible to live in this world without hurting other beings, but that does not count as an immoral act since the intention is not to hurt.

- For example, if we have a wound on the head, we have to apply medication and get it healed; otherwise one may even die from that. Yet, numerous tiny creatures on the wound die when we apply the medication. There is nothing we can do to avoid it unless we are willing to risk our own life.
- But the point is that this single human life is much more "worthy" than all those creatures multiplied many times over; see, "[How to Evaluate Weights of Different Kamma.](#)"
- This is an important point because many people get stressed over even cleaning their house for the fear of killing insects. But if we do not keep the house clean, those insects will multiply and make the problem even bigger. One always need to look at things with a deeper understanding. The best thing to do is to keep the house clean so that insects are not attracted in the first place.
- It is important to clarify these concepts, because it is difficult to attain any kind of calmness (*samādhī*) in the mind if one's mind is agitated by such things as "Am I sitting on some unseen tiny insects and killing them?". As long as our intent is not directed to willfully taking another life with hatred, there will not be any negative consequences.

21.23 News Article on Robin Williams and Buddhist Meditation

I have not read the books written by the author of this following news article, so I cannot comment on his books. But I thought this sad news about Robin Williams illustrates the concept of *anicca* (that one cannot maintain anything to one's satisfaction in this world and that there is hidden suffering). He had more than enough money and fame, but apparently he was depressed in the latter years.

- Having a peaceful mind cannot be matched by any amount of money or fame; see, "[First Noble Truth – A Simple Explanation of One Aspect.](#)"
- According to the Buddha, the suffering is proportional to the craving. Getting old is more stressful for those who have enjoyed beauty, fame, power, etc. But the inevitability of old age and dying is common to us all.

[WebLink: YOUTUBE: Aging Stars of the Golden Age](#)

- Buddhist meditation is primarily on understanding the true nature of the world and that hidden suffering may come out unexpectedly; that understanding itself makes one have a peaceful mind; see, "[1. Introduction to Buddhist Meditation.](#)"
- When depression or old age hits, the mind gets weak. Thus one should preferably start when the mind is sound and healthy.
- Suicide can only make things worse in the "long term" in the rebirth process. It is never too late to start at any stage. Human life is rare and should not be wasted at any stage.

Article: [Meditation Isn't Enough: A Buddhist Perspective on Suicide](#)

21.24 World Historical Timeline

It will be convenient to have a timeline of the major world events that I can refer to in my posts. Please let me know any errors that you may see. My goal is to provide a consistent and accurate timeline.

Note: I used c. to denote *circa* or about

I have added descriptive links to some events, and will try to add more links in the future.

Date	Event
Before 10k BCE	WebLink: WIKI: Last Ice Age
3.1k BCE	First king of Egypt, King Menes
2.5k BCE	WebLink: WIKI: Mohenjo Daro civilization in India
2.1k - 1.6k BCE	WebLink: WIKI: The Xia Dynasty of China
Before 1.7k BCE	Abraham came to Jerusalem from Ur (Old Testament)
1.4k BCE	City of Troy, kingdom of Crete, and other Greek cities
1.4k - 0.9k BCE	Olmec civilization in Mexico
776 BCE	First Olympiad
558-530 BCE	Cyrus ruled North India
Until 536 BCE	Daries I, II, III ruled North India; until Chandagupta, Persian and Greek kings ruled North India
563-483 BCE	Buddha Gotama
470-399 BCE	Philosopher Socrates
538 BCE	Old Testament was written
424-348 BCE	Plato: First Western philosopher whose writings survived intact
384 - 322 BCE	Aristotle: student of Plato and teacher of Alexander the Great
c. 333 BCE	Emperor Alexander's Empire peaks
323 - 325 BCE	Alexander the Great in India
268-231 BCE	Emperor Asoka ruled North India
307-276 BCE	King Devanampiyatissa in Sri Lanka
247 BCE	Ven. Mahinda in Anuradhapura, Sri Lanka
41 BCE	Beginning of the Roman Empire

Date	Event
29 BCE	Tipiṭaka written down in Sri Lanka
6–4 BC to 30–33 AD	Jesus of Nazareth or Jesus Christ
31 BCE	Augustus becomes the first Roman Emperor and ruled until 14 CE
c. 150-250 CE	WebLink: WIKI: Life of Nagarjuna ; considered to be the founder of Mahāyāna Buddhism
After 200 CE	Roman empire starts to decline
4th century CE	Buddhism introduced to Korea
380 CE	Christianity became the official religion in Roman empire
5th century CE	Burma adopts Theravāda Buddhism
412-434 CE	Buddhaghosa arrives in Sri Lanka and writes Visuddhimagga
552 CE	Buddhism enters Japan from Korea
589 CE	First Chinese commentaries written
586 CE	Beginning of the Dark Ages in Europe with the decay of the Roman empire
6th century CE	First diffusion of Buddhism in Tibet
570-632 CE	Prophet Muhammad
622 CE - (1258-1492) CE	WebLink: WIKI: Islamic Golden Age
618-907 CE	Chinese T'ang dynasty; golden age of Buddhism in China
1215 CE	King John signs the Magna Carta granting rights to English citizens
1280	WebLink: WIKI: Eyeglasses invented in Italy
c. 1420 - c. 1600	Renaissance in Europe starting in Florence, Italy
1450	Gutenberg in Germany invents the printing press
1492	Modern Age begins with the arrival of Columbus in America
1564–1642	Galileo Galilei
1596–1650	Rene Descartes
1610	Galileo announces observation of mountains on the Moon and the existence of four planets.

Date	Event
1642	Adding machine invented by Blaise Pascal
1643–1727	Isaac Newton
c. 1650 - c. 1800	<u>WebLink: WIKI: European "Enlightenment"</u>
1662	Fermat's Principle of Least Time
1678	Huygens' wave theory
1687	Newton published Principia Mathematica
1688	English revolution
1698	Steam engine invented by Thomas Savery
1749–1827	P.S. de Laplace
1774	Priestly isolates oxygen
1776	America declares independence from England
1789	French revolution period
1791	Steamboat invented by John Fitch
1798	Vaccination invented by Edward Jenner
1804	Locomotive invented by Richard Trevithick
1809–1882	Charles Darwin
1816	Huygens–Fresnel principle explaining light interference
1821	Faraday demonstrates the principle of the electric motor
1822	Charles Babbage designs his first mechanical computer
1826	Photography invented by Joseph Nicephore Niepce
1834	Refrigerator invented by Jacob Perkins
1835	Morse code invented by Samuel Morse
1837	American Samuel Morse invented telegraph
1842	Anaesthesia invented by Crawford Long
1843	Typewriter invented by Charles Thurber

Date	Event
1846	Rotary printing press invented by Richard M. Hoe
1859	Charles Darwin publishes <i>The Origin of Species</i>
1868	Poisson explained Young's double slit experiment with Huygens–Fresnel principle
1869	Mendeleev produces the Periodic Table
1873	Maxwell states the laws of electro-magnetic radiation
1877	Phonograph invented by Thomas Alva Edison; Microphone invented by Emile Berliner
1878	Edison invents the incandescent lamp
1883	First skyscraper built in Chicago (ten stories)
1888	Hertz produces radio waves
1893	Wireless communication invented by Nikola Tesla
1895	Diesel engine invented by Rudolf Diesel
1898	Remote control invented by Nikola Tesla
1900	Planck develops quantum theory
1901	Vacuum cleaner invented by Hubert Booth
1903	Powered airplane invented by Wilbur Wright and Orville Wright
1905	Einstein proved that photon is a particle
1905	Einstein's Theory of Relativity
1907	Color photography invented by Auguste and Louis Lumiere
1908	Henry Ford mass-produces the Model T
1919	London to Paris air service begins
1923	Sound film invented by Lee DeForest
1923	Edwin Hubble discovers the first galaxy other than Milky Way
1928	Antibiotics, penicillin invented by Alexander Fleming
1937	Jet engine invented by Frank Whittle and Hans von Ohain
1937	Alan Turing develops the concept of a theoretical computing machine

Date	Event
1945	The atomic bomb
1951	Nuclear power reactor invented by Walter Zinn
1957	Sputnik I and Sputnik II: Sputnik I and Sputnik II are launched by the Russians
1958	The first integrated circuit, or silicon chip, is produced by the US Jack Kilby & Robert Noyce
1960	Laser invented by Theodore Harold Maiman
1961	Uri Gagarin is the first man in space
1965	The Big Bang theory confirmed by Penzias and Wilson

21.25 Second Largest Religion by State in the US

The second largest religion by state in the United States (2012):

[WebLink: BOINGBOING: Christianity is the top Religion](#)

However, Buddha Dhamma is not a religion, in the sense of providing a set of guidelines to live by. It is about the natural laws of nature. Any person of any religious faith (or no faith in any religion, i.e., atheist) can follow Dhamma and benefit. All religions are about leading a good moral life, but Buddha Dhamma describes a much more comprehensive “world view” where this life of 100 years is just a blip.

If one becomes convinced of the truth of the Buddha's world view, i.e., that this life is not the only we had or we will have, and that there are consequences to one's actions, and the only way to get relief from inevitable suffering at least at the old age and death is to purify one's mind, then the person is a Buddhist. It is all in one's mind. No one else is tracking one's progress, and no one else can purify one's own mind.

21.26 Introduction to “Rebirth by Francis Story” – Ian Stevenson

The following are the scanned pages from the book, “Rebirth-as Doctrine and Experience” by Francis Story. The first scan is an inside cover page, and the rest are the Introduction pages by Ian Stevenson. Dr. Stevenson mentions that he is a Buddhist on page 3. The whole introduction is insightful.

[WebLink: PDF File: Introduction-Stevenson](#)

21.27 Thirty One Planes of Existence

Here is a video from Carl Sagan to get an idea how vast our “detectable universe” is:

[WebLink: YOUTUBE: Carl Sagan "100 Billion Galaxies each W/100 Billion Stars"](#)

The “world view” of the Buddha is not merely about the living beings on this planet. Our Solar system is one of an infinite number of “world systems” (planetary systems). In EACH planetary system with life (scientists have not found even one yet; but they are out there!), there are 31 “planes of existence”. As we find out below, we can “see” only two of these realms: our human realm and the animal realm. Thus our “world” is much more complex than even the present-day science believes. As some of you may already know, science cannot account for 95% of the mass of the universe, which they label “dark energy” and “dark matter”. This is why I say that the Buddha transcended “this world”. He was able to “see” the whole of existence: see “Godel’s Incompleteness Theorem” under “Dhamma and Science”.

Now, it is not easy to describe the 31 planes of existence in a short essay. Therefore, I will use a visual to simplify things a bit.

Imagine a sphere with 31 shells, with a small sphere in the middle. Thus the total volume of the big sphere is completely filled by the center sphere and surrounding shells. The 31 sections represent the 31 planes of existence. I emphasize that this is just a visual. The reality is different. For example, animal and human realms co-exist in reality. Also, both time and space are infinite in reality.

1. The innermost sphere represent the Niraya (hell) where there is non-stop suffering; next is the animal realm. Going outward there are two more realms where suffering is higher than at the human realm (the fifth shell). The sixth through eleventh shells represent the realms of the devas (wrongly translated as gods by many), beings who enjoy higher level of mundane happiness and no suffering. These innermost 11 shells represent the kamaloka, where all five physical sense faculties are present.
2. The next 16 shells represent realms where only two physical sense faculties (eye and ear) are active. These beings have very fine (less dense) bodies. These are called rūpa lokas.
3. The last 4 shells represent the arūpa lokas, where beings have ultra fine bodies and only the mind faculty; no physical senses.
4. In rūpa and arūpa lokas, the beings are in jhānic states. These states can be attained by humans and thus a humans can “temporarily live” in those lokas by attaining jhānā. The 16 realms in the rūpa loka correspond to the four lower jhānā, and the 4 realms in the arūpa loka correspond to the higher four jhānā.
5. Any living being (including each of us) has been in all realms in this beginning-less saṁsāra. We have been in the niraya (hell) and we have been at the highest (except on arūpa loka which can be accessed only by Anāgāmi or Non-Returners). One time the Buddha pointed to a bunch of ants on the ground and told bhikkhus that each of those ants had lived in a Brahma loka. The saṁsāra is that long; there is no discernible beginning.
6. Above the human realm, there is no suffering (except at death, which is inevitable). However, unless one has achieved at least the Stream Entry (Sotāpanna) stage, even a being at the highest level can fall to any lower level, and thus will end up in the niraya (hell) at some point; once there one will spend a long agonizing time there and eventually come out. Each of us have done this many times over. I will explain the cause of births in different realms in terms of “kamma seeds” in upcoming posts.
7. So, each living being just moves from one realm to another, but spends most time in the four lower worlds, mainly because once fallen there it is hard to come out. This “samsaric wandering” is the critical point to think about and comprehend.

8. As one moves away from the center the level of suffering decreases, and level of mundane pleasure increases up to the 11th realm. After that in the rūpa and arūpa lokas it is mainly the jhānic pleasures, not the sense pleasures.

9. The human realm is the only one from which one can attain Nibbāna. Nibbāna, in this model, corresponds to getting out of all 31 shells, out of the big sphere; no more rebirth in any of the 31 realms. Nibbāna is where the permanent sukha or nirāmisa sukha, is. When one attains Nibbāna or Arahant hood, he/she looks just like any other human, but has no attachments to any worldly things. He still has some kamma vipāka to pay off from the kamma seed that he was born with. When that kammic power is used up, he dies and is not reborn because there are no kamma seeds left to start a new birth. He/she is in *Parinibbāna* with *nirāmisa sukha*.

10. Can we taste Nibbānic “pleasure”? Yes. We can taste it in increments, even below the Stream Entry stage. This is nirāmisa sukha, the “pleasure of giving up worldly things”. This nirāmisa sukha has “quantum jumps” at the four stages of Nibbāna: Stream Entry, Once-Returner, Non-Returner, Arahant. Thus when one is on the Path, one can experience nirāmisa sukha at varying degrees, all the way to Nibbānic bliss, during this very lifetime.

11. All these 31 realms are located in our solar system (Chakrawata), and are associated with the Earth. There are a great number of such Chakrawata (planetary systems) in existence at all times with living beings. These are in clusters of small (galaxies?), medium (universes?), and large (multiverse?) “world systems”. But none is permanent. They come into being and eventually perish. Within the past 100 years or so, scientists have confirmed the existence of billions of planetary systems within galaxies in our universe, and are now exploring the possibility of the existence of multiple universes (multiverse).

The other big factor to take into account is that we have been born in almost all of these realms in our sansāric journey that has no traceable beginning. All of us have been bouncing around “inside the sphere” (mainly in the inner ones) from a beginning that is not even discernible to a Buddha.

Next, “[Sansāric Time Scale](#)”,

21.28 Curiosity Rover finds Crater probably was once a Giant Martian Lake

According to Buddha Dhamma we are alone in the universe. These preliminary results from the NASA Curiosity Rover may not hold up in the end as evidence that life existed on Mars. But there will many more to come, especially if technology is developed to explore distant stars.

[WebLink: YOUTUBE: Curiosity rover finds crater it is exploring was once a giant Martian LAKE](#)

Here is a report that came out today, Dec 9, 2014, which has another video by NASA:

[WebLink: DAILYMAIL: Curiosity rover finds crater it is exploring was once a giant Martian LAKE](#)

21.29 Ancient teeth found in China challenge modern human migration theory

October 16, 2015

When we discuss the *Aggañña Sutta*, that describes how the Earth and life originated it will become very clear that the basis of current theories on “human evolution” is completely wrong. However, they are consistent with Buddha Dhamma in the sense that species will exist only when conditions for their existence prevail.

- The current scientific theory is that human originated in Africa and then migrated to other parts of the world, starting about 50,000 years ago. Recent evidence just published in the prestigious journal Nature provides evidence of the existence of humans like us in China some 80,000 to 100,000 years ago. Below is the news article from CNN. I will add the paper from Nature when it becomes available:

[WebLink: CNN: Ancient teeth found in China challenge modern human migration theory](#)

- In this context, I must also point out that there are other archeological evidence for the existence of humans in Sri Lanka and India dating back to 30,000 years and earlier:

[WebLink: WIKI: Balangoda Man](#)

December 18, 2015

The following post says, “..We’re quickly learning that Europe and Africa may not provide the best model for us to use to interpret the fossil record of East Asia. For example, Denisova Cave is as far east as we’ve found the Neanderthals, and they don’t seem to have occupied Siberia permanently. This is unlike Europe, where they lived until about 40,000 years ago. **And so far, no Neanderthals have been found in China or anywhere further South of Denisova Cave.**

The fact is that we’ve really only scratched the surface in East Asia..”

21.30 Notes

Word	Details
<i>anuloma</i>	“ <i>anuloma</i> ” comes from “ <i>anu</i> ” + “ <i>lo</i> ” + “ <i>ma</i> ” where “ <i>anu</i> ” means “through the understanding of <i>Tilakkhaṇa</i> ”, “ <i>lo</i> ” means “craving for worldly things”, and “ <i>ma</i> ” means “removal”, and thus “ <i>anuloma</i> ” means “removal of craving for worldly things to some extent via the comprehension of <i>Tilakkhaṇa</i> ” or conformity (behaviour in accordance with socially accepted conventions).
<i>bhagavatā</i>	“ <i>Bhagavatā</i> ” (“ <i>bhaga</i> ” + “ <i>vata</i> ” where “ <i>bhaga</i> ” means divide and “ <i>vata</i> ” means “the process” that looks like a “living being”) means this Dhamma, by analyzing a “person” in terms of “actions”, illustrates that there is no enduring entity in a “living being”.
<u><i>dhammānusārī</i></u>	<i>dhamma</i> + <i>anusārī</i> is a Dhamma-follower <i>anusārī</i> : (adj.), striving after; acting in accordance with; follower. <i>anusari</i> :[aor. of <i>anuserati</i>] went after; followed.
<i>gandhabba</i>	<i>gandhabba</i> can only inhale odours (“ <i>gandha</i> ” + “ <i>abba</i> ”) as food, and thus the name.
<i>kāmacchanda</i>	<i>kāma chanda</i> = “ <i>kāma</i> ” + “ <i>icca</i> ” + “ <i>andha</i> ” where “ <i>kāma</i> ” is sense pleasures, “ <i>ichcha</i> ” is liking and “ <i>andha</i> ” is becomes blind; thus <i>kāmacchanda</i> means blinded by attachment to sense pleasures.
<i>lobha</i>	“ <i>lobha</i> ” comes from “ <i>lo</i> ” + “ <i>bha</i> ” where “ <i>lo</i> ” means “craving for worldly things” and “ <i>bha</i> ” means “appear and gets established” or “immersed” and thus “ <i>lobha</i> ” means “immersed in craving for worldly things”. <i>lobha</i> is the extreme of greed. “ <i>lo</i> ” + “ <i>bha</i> ” where “ <i>lo</i> ” is for the <i>lokaya</i> or world and “ <i>bha</i> ” is for “ <i>bihiveema</i> ” (arise or establish) is the main reason how the material world is created and sustained with greed.
<u><i>māna</i></u>	‘conceit’, pride, is one of the 10 fetters binding to existence (s. <i>saṃyojana</i>). It vanishes completely only at the entrance to Arahantship, or Holiness (cf. <i>asmi-māna</i>). It is further one of the proclivities (s. <i>anusaya</i>) and defilements (s. <i>kilesa</i>). “The equality-conceit (<i>māna</i>), the inferiority-conceit (<i>omāna</i>) and the superiority-conceit (<i>atimāna</i>): this threefold conceit should be overcome. For, after overcoming this threefold conceit, the monk, through the full penetration of conceit, is said to have put an end to suffering” (A. VI, 49).
<i>moha</i>	<i>Moha</i> comes from “ <i>muva</i> ” + “ <i>hā</i> ” which symbolizes a vessel with its mouth closed; thus one cannot see what is inside. In the same way, one acts with <i>moha</i> because one is totally unaware that such immoral acts will have very bad consequences; one’s mind is totally dark.
<i>paṭicca</i>	“ <i>paṭicca</i> ” (“ <i>paṭi</i> ” + “ <i>icca</i> ,” where “ <i>paṭi</i> ” is bind or bond and “ <i>icca</i> ” means desire and <i>paṭicca</i> means bond with desire willingly).
<u><i>saddhānusārī</i></u>	<i>saddha</i> + <i>anusārī</i> is a faith-follower <i>anusārī</i> : (adj.), striving after; acting in accordance with; follower. <i>anusari</i> :[aor. of <i>anuserati</i>] went after; followed.
<i>samauppāda</i>	“ <i>sama uppāda</i> ” (where “ <i>sama</i> ” is similar and “ <i>uppāda</i> ” means birth).

<i>sammā</i>	<i>sammā</i> which comes from “ <i>saṇ</i> ” + “ <i>mā</i> ,” which means “to become free of <i>saṇ</i> .”
<i>saṇ</i>	“ <i>saṇ</i> ” is basically the term for “good and bad things we acquire” through our moral/immoral deeds.
<i>sandiṭṭhiko</i>	“ <i>Sandiṭṭhiko</i> ” (“ <i>saṇ</i> ” + “ <i>diṭṭhiko</i> ”). <i>Dhamma</i> explains and clarifies “ <i>saṇ</i> ” that are the causes (<i>avijjā</i> and <i>taṇhā</i>) for arising of <i>saṅkhata</i> (<i>sankata</i> in Sinhala) (whether they are living or inert).
<i>saṅgha</i>	<i>saṅgha</i> is “ <i>saṇ</i> ” + “ <i>gha</i> ”, or those who have either gotten rid or are successfully getting rid of “<i>saṇ</i>” , and by this definition, one does not have to be a <i>bhikkhu</i> to belong to the <i>saṅgha</i>
<i>saṅkhata</i> (<i>sankata</i> in Sinhala)	[pp. of <i>saṅkharoti</i>] conditioned; prepared; produced by a cause; the ‘formed’, i.e. anything originated or conditioned, comprises all phenomena of existence.
<i>saṅkhāra</i>	<i>Saṅkhāra</i> (“ <i>saṇ</i> ” + “ <i>kara</i> ” or actions; සන් + කර්ම in Sinhala) are anything (thought, speech, bodily actions) done while living in “this world” of 31 realms.
<i>saṅkhata</i>	(<i>sankata</i> in Sinhala) [pp. of <i>saṅkharoti</i>] conditioned; prepared; produced by a cause.
<i>svakkhata</i>	“ <i>Svakkhata</i> ” (“ <i>sva</i> ” for “self” and “+ “ <i>akkata</i> ” or “ <i>akrutha</i> ” or “ <i>akriya</i> ” means putting out of action) meaning it leads to getting rid of the concept of a “me” (<i>asmai māna</i>) — which happens at the <i>Arahant</i> stage. It is not about whether a “self” exists or not; it is rather to realize that nothing in this world is worth to be considered “mine”.
<i>upādāna</i>	<i>Upādāna</i> basically means “pulling it closer (in one’s mind)” (“ <i>upa</i> ” + “ <i>ādāna</i> ”, where “ <i>upa</i> ” means “close” and “ <i>ādāna</i> ” means “pull”). [<i>ādāna</i> : (nt.), taking up; grasping.]
<i>vinaya</i>	<i>vinaya</i> comes from “ <i>vi</i> ” + “ <i>naya</i> ”, where “ <i>naya</i> ” in Pāli or Sinhala means debt and <i>vinaya</i> means not in debt.
<u><i>vipallāsa</i></u>	<p>‘perversions’ or ‘distortions’. -</p> <p>“There are 4 perversions which may be either:</p> <ul style="list-style-type: none"> ▪ of perception (<i>saññā-vipallāsa</i>), ▪ of consciousness (<i>citta-vipallāsa</i>), or ▪ of views (<i>diṭṭhi-vipallāsa</i>). <p>And which are these four? To regard:</p> <ul style="list-style-type: none"> ▪ what is <i>anicca</i> as <i>nicca</i>; ▪ what is <i>dukkha</i> as <i>sukha</i> (or happiness-yielding); ▪ what is <i>anattā</i> as <i>attā</i>; ▪ what is impure (ugly: <i>asubha</i>) as pure or (beautiful: <i>subha</i>)” <p>(A.IV.49). - See Manual of Insight, by Ledi Sayadaw (WHEEL 31/32). p.5.</p>

	<p>“Of the perversions, the following are eliminated by the 1st path-knowledge (<i>sotāpatti</i>): the perversions of perception, consciousness and views, that the <i>anicca</i> is <i>nicca</i> and what is <i>anatta</i> is <i>atta</i>; further, the perversion of views that the <i>dukkha</i> (suffering) is <i>sukha</i> (happiness), and the <i>asubha</i> (impure) is <i>subha</i> (pure) is also eliminated.</p> <p>By the 3rd path-knowledge (<i>anāgāmitā</i>) are eliminated: the perversions of perception and consciousness that the <i>asubha</i> (impure) is <i>subha</i> (pure).</p> <p>By the 4th path-knowledge (<i>arahatta</i>) are eliminated the perversions of perception and consciousness that the <i>dukkha</i> (suffering) is <i>sukha</i> (happiness)” (Vis. M. XXII, 68).</p>
<i>vipariyesa</i>	(a contamination form between ° <i>pariyaya</i> & ° <i>pallāsa</i>) reversal, contrariness, wrong state Kvu 306 (three reversals: <i>saññā</i> °, <i>citta</i> °, <i>diṭṭhi</i> °; or of perception, consciousness & views.
<i>vyāpada</i>	<i>vyāpada</i> comes from “ <i>vaya</i> ” + “ <i>pada</i> ”, where “ <i>vaya</i> ” means decline and “ <i>pada</i> ” means walk towards; thus <i>vyāpada</i> means one is on a (morally) declining path.
<i>yuñjati</i>	[yuj + ṁ - a] joins with; engages in; endeavours.
<u>yutta</u>	[pp. of <u>yuñjati</u>] yoked; harnessed; connected with ; given to; engaged in; proper.

XXII Sitemap

I have arranged the sections roughly in increasing complexity. However, you may want to scan through each section to get an idea of what is in each section. People have backgrounds at very different levels. Furthermore, even those who have been exposed to Buddhism for many years may not have a good understanding of the fundamentals.

Living Dhamma (This section starts at a basic level and proceeds to deep levels)

Essential Buddhism

- [Four Noble Truths – Suffering and Its Elimination](#)
- [Introduction to Citta, Vedanā, Saññā, Saṅkhāra, and Viññāna](#)
- [Viññāna – Consciousness Together With Future Expectations](#)
- [Connection Between Saṅkhāra and Viññāna](#)
- [Viññāna and Saṅkhāra – Connection to Paticca Samuppāda](#)
- [Breath Meditation Is Addictive and Harmful in the Long Run](#)
- [Ānāpānasati Eliminates Mental Stress Permanently](#)
- [Ānāpāna and Satipatthāna – Fundamentals](#)
- [Sati in Ānāpānasati/Satipatthāna – Two Meanings of Sati](#)

Living Dhamma – Overview

- [Living Dhamma – Introduction](#)
- [Peace of Mind to Nibbāna – The Key Step](#)
- [Starting on the Path Even without Belief in Rebirth](#) (with first Desanā “The Hidden Suffering that We All Can Understand”; desanā title different from post title)

Dhamma with Less Pāli

- [Buddha Dhamma for an Inquiring Mind – Part I](#)
- [“Root of All Suffering – Ten Immoral Actions”](#) (with the desanā “Ten Immoral Actions (Dasa Akusala)”.
- [Is Suffering the Same as the First Noble Truth on Suffering?](#)

- [Complexity of the Mind – Viññāna and Saṅkhāra](#)
- [Dhamma, Saṅkhāra, Saṅkhata, Rūpa, Viññāna, Gati, Āsava, Anusaya](#)
- [Bhava and Bhavaṅga – Simply Explained!](#)
- [Citta, Mano, Viññāna – Stages of a Thought](#)

Living Dhamma – Fundamentals

- [What Are Kilesa \(Mental Impurities\)? – Connection to Cetasika](#)
- [Suffering in This Life – Role of Mental Impurities](#) (with Desanā 2)
- [Satipatṭhāna Sutta – Relevance to Suffering in This Life](#) (with Desanā 3)
- [How Are Gati and Kilesa Incorporated into Thoughts?](#) (with Desanā 4)
- [Noble Eightfold Path – Role of Sobhana Cetasika](#) (with Desana 5; in two parts)
- [Getting to Samādhi](#) (with Desana 6)
- [Sexual Orientation – Effects of Kamma and Gati \(Saṅkhāra\)](#)

Mundane Sammā Samādhi

- [Micchā Ditthi – Connection to Hetu Phala \(Cause and Effect\)](#) (with Desanā 7)
- [Suffering in This Life and Paticca Samuppāda](#) (with Desanā 8)
- [Suffering in This Life and Paticca Samuppāda II](#) (with Desanā 9)

Transition to Noble Eightfold Path

- [Is It Necessary for a Buddhist to Eliminate Sensual Desires?](#)
- [Sīla, Samādhi, Paññā to Paññā, Sīla, Samādhi](#)
- [Ye Dhammā Hetuppabhavā.. and yam kiñci samudaya dhammaṃ..](#)

Samādhi, Jhāna (Dhyāna), Magga Phala

- [Samādhi, Jhāna, Magga Phala – Introduction](#)
- [Vitakka, Vicāra, Savitakka, Savicāra, and Avitakka, Avicāra](#)
- [Jhānic Experience in Detail – Sāmaññaphala Sutta \(DN 2\)](#)
- [Ascendancy to Nibbāna via Jhāna \(Dhyāna\)](#)
- [Paññāvimutti – Arahantship without Jhāna](#)
- [Mundane versus Supramundane Jhāna](#)
- [Nirodha Samāpatti, Phala Samāpatti, Jhāna, and Jhāna Samāpatti](#)

Mental Body – Gandhabba

- [Our Mental Body – Gandhabba](#)
- [Gandhabba State – Evidence from Tipitaka](#)
- [Antarabhava and Gandhabba](#)
- [Ānantariya Kamma – Connection to Gandhabba](#)
- [Mental Body \(Gandhabba\) – Personal Accounts](#)
- [Abnormal Births Due to Gandhabba Transformations](#)
- [Cattāro Āhāra for Mental Body or Gandhabba](#)
- [Micchā Ditthi, Gandhabba, and Sotāpanna Stage](#)
- [Working of Kammā – Critical Role of Conditions](#)

Nāma & Rūpa to Nāmarūpa

In this important subsection, we will discuss the link between mind (nāma) and matter (rūpa). These are deeper analyses. For simpler analyses, see, “[The Five Aggregates \(Pañcakkhandha\)](#).”

- Rūpa Aggregate

- [What are rūpa? – Dhamma are rūpa too!](#)
- [Bhūta and Yathābhūta – What Do They Really Mean](#)
- Vedanā (Feelings) Aggregate
 - [Vedanā – What It Really Means](#)
 - [Vedanā and Samphassa-Jā-Vedanā – More Than Just Feelings](#)
 - [Does Bodily Pain Arise Only Due to Kamma Vipāka?](#)
- Saññā (Perception) Aggregate
 - [Saññā – What It Really Means](#)
 - [Future Suffering – Why It Arises](#)
 - [Ditthi, Saññā, and Saṅkhāra – How They Relate](#)
- Saṅkhāra Aggregate
 - [Saṅkhāra – What It Really Means](#)
- Viññāṇa Aggregate
 - [Viññāṇa – What It Really Means](#)
 - [Kamma Viññāṇa – Link Between Mind and Matter](#)
 - [Anidassana Viññāṇa – What It Really Means](#)
- Sakkāya Dīṭṭhi
 - [Do I Have “A Mind” That Is Fixed and “Mine”?](#)
- Nāmarūpa Formation
 - [Nāmarūpa in Vipāka Viññāṇa](#)
 - [Nāmarūpa in Idappaccayatā Paticca Samuppāda](#)
 - [Nāmarūpa – Different Types](#)
 - [Kamma Viññāṇa – Link Between Mind and Matter](#)
 - [Kamma Viññāṇa and Nāmarūpa Pariccheda Ñāṇa](#)

Bhāvanā (Meditation)

The numbered posts are to be read in that order. Even for those who are practicing Buddhists, I recommend starting at the Introduction (#1), and going down the list of topics at least the first time.

- It would be a good idea to read the posts in the following subsection at some point, in order to get an idea about the reasoning behind this approach: [“Essential Buddhism.”](#)

Inconsistencies with Science

1. We all are impressed by the scientific advances made during the past 100 years or so making our lives easier and more productive. I am actually a cheerleader for scientific and technological advances.

- Physics had been my passion since high school days, and that changed when I started learning Buddha Dhamma several years ago. I still love and work on topics of interest in physics (and science in general). Fortunately, I am finding that those two interests are not mutually exclusive, and there is significant overlap. In fact, this section is the result of my two overlapping interests.

2. The following posts discuss cases where current theories of science are not consistent with Buddha Dhamma. I believe that science will recognize the primary nature of the mind in the future, and will discard the current notion that the mind (consciousness) arises out of inert matter.

[Neuroscience says there is no Free Will? – That is a Misinterpretation!](#)

[The Double Slit Experiment – Correlation between Mind and Matter?](#)

[Vision \(Cakkhu Viññāna\) is Not Just Seeing](#)

3. Despite the advances in science and technology, there is much about the human mind that science does not understand, and has not even begun to understand. **Western science is based on the five physical senses, leaving out the most important one, the mind.**

- At the present time, in 2016, scientists have the wrong view that consciousness originates in the brain.
- All scientific theories relating to the mind are based on this wrong hypothesis. However, Buddha Dhamma says not only that mind is a sense of its own, but it is the most powerful of all six senses.

Here is a post from the Abhidhamma section that has a deeper analysis of the brain-mind connection:

[Brain – Interface between Mind and Body](#)

Quantum Mechanics and Dhamma

This section will discuss two issues:

1. **A new interpretation of quantum mechanics (QM) based on non-locality is presented based on Feynman's ideas.** Concepts like wave-particle duality, observer effect, are not needed. Furthermore, complex interpretations like the "Many-Worlds interpretation" are avoided. All existing experimental data will be shown to be consistent with this interpretation.
2. **A deeper understanding of how *kamma* automatically lead to corresponding *kamma vipāka* in Buddhism (Buddha Dhamma), becomes clear with this interpretation.**
